This document contains the latest information for the current release of IBM Spectrum Copy Data Management (CDM). The content highlights significant fixes and known issues in this release.

[Release 2.2.13.2 \(Release date: 08/06/2021\)](#)

Recommended Minimum Requirements

- 64-bit dual core machine
- 48 GB memory

<i>Issue ID</i>	<i>Affects</i>	<i>Status</i>	<i>Description</i>
ECC-14623	IBM Storage	IMPROVEMENT	Adds support for SVC Enhanced Stretch Cluster for Storage Controller, VMware and Oracle workloads.
ECC-14677	IBM Storage	IMPROVEMENT	Adds the option to skip waiting for FlashCopy to finish for Storage Controller restore jobs.
ECSUST-2348	IBM Storage	RESOLVED	Resolves an issue where Global Mirror with change volume backup jobs were failing if link between SVC storages was unstable.
ECC-13895	SAP HANA Backup	RESOLVED	Fixes an issue where log backups are not purged correctly as specified by the retention setting.
ECC-14519	User Interface	RESOLVED	Resolves an issue so that the inventory job log displays GB18030 characters correctly for the first run time.
ECC-14198	SQL Backup	KNOWN	SQL backups fail when using non-ASCII characters in the registration fields.
ECC-13764	Reporting	KNOWN	Reports exported as PDF will not display non-ASCII characters correctly.
ECC-14348	Maintenance	KNOWN	Applications backed up using FlashCopy Incremental are not condensing out properly.
ECC-14258	Maintenance	KNOWN	Oracle backups are not condensing out properly on the Global Mirror site when the SLA is configured with FlashCopy and Global Mirror in a fan-out setup.
