**IBM Automation**

Unlock events in mission-critical systems

With IBM MQ Advanced & IBM MQ Advanced for z/OS Value Unit Edition

IBM MQ provides resilient and secure connectivity for mission critical systems and applications across hybrid and multi-cloud environments.
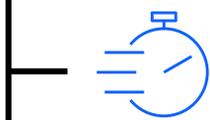

With the MQ sink and source connectors for Apache Kafka in IBM MQ Advanced, you can now tap into mission-critical data and deliver it seamlessly into Apache Kafka to react in real-time to events that are happening in core systems.

IBM MQ Advanced & IBM MQ Advanced for z/OS VUE

Connect IBM MQ and Apache Kafka
Fully IBM-supported MQ sink and source connectors are now included to make it easier than ever to connect core business systems to Apache Kafka.

Unlock events
Use streaming queues or topics to expose events in disparate systems without interrupting the flow of data between mission-critical apps.

Discover insights
Streams of valuable data from across the business enable you to drive new insights and act on events as they happen.

Combine with **IBM Event Automation** to put business events to work and maximize your business' potential by enabling users to detect situations, act in real-time, and automate decisions.
