

IBM, Aqua Security, and Uniforce partner to drive cloud native security in Taiwan

IBM joined [Aqua Security](#) and their local distributor, [Uniforce](#), at the [Cybersec 2022](#) event held in Taipei in September. The event drew companies across multiple industries to understand how to accelerate digital transformation and increase maturity in cloud native application security.

IBM and Uniforce showed attendees how Aqua's Cloud Native Application Protection Platform (CNAPP) can help customers securely adopt and scale applications deployed on Red Hat OpenShift on IBM Power. The combination of IBM's highly resilient and secure Power-based compute, and Aqua's leading cloud native security solution, ensures that customers across government, financial services, telecoms, and other industries, can stop attacks on their cloud native applications and maintain service uptime.

Get to Market faster with IBM Power and Aqua

Accelerate cloud native transformation

Aqua enhances existing IBM security capabilities, providing a unified platform to secure the software supply chain, speed cloud compliance and simplify runtime protection. Aqua's support for IBM Power, and integrations with the OpenShift container environment, enables customers to maintain

consolidated control and visibility for hybrid and multi-cloud deployments from code to runtime, and enforce consistent run-time policies across cloud VMs, containers, managed container services (including Red Hat OpenShift on AWS, Azure Red Hat OpenShift, VMWare Tanzu, and AWS Fargate), and serverless.

Aqua's CNAPP allows organizations to take advantage of the scalability of Red Hat OpenShift and IBM Power to deliver excellent customer experiences. Customers can take advantage of a powerful and flexible platform for modernizing their applications, as well as developing and deploying new cloud native apps in a hybrid cloud infrastructure.

IBM, alongside Uniforce, will provide a demo centre in Taipei, Taiwan in November 2022 for customers to learn more about how they can accelerate their journey to cloud, securing from day one and protecting in real-time with Aqua Security and IBM Power.

Customers in Taiwan, book your next in-person IBM customer briefing session here:
