IBM Security Services for Cloud Security Posture Management

Moving to cloud brings additional governance complexity

– Lack of visibility and decentralized administration

– Complexity of compliance management

– Inability to rapidly detect and respond

Improve your cloud security posture with continuous compliance management

IBM Security provides continuous visibility, remediation and management of compliance requirements across the entire cloud environment.

99%

of cloud failures will be the customer's fault

IBM can meet you wherever you are in your journey

– Strategy and assessments

– Solution design

– Implementation and systems integration

– Managed services

Key benefits

IBM Security Services for Cloud Security Posture Management helps assess, reduce and manage risk resulting from reduced visibility, complex compliance requirements and misconfiguration across public multicloud infrastructure. We deliver:

– End to end cloud security posture strategy and implementation

– Comprehensive assessment of your existing cloud environment

– Definition of your strategy and future state of GRC strategy

– Implementation and management of tooling and processes

– Software partnerships and licenses

Value

Our services can help:

Comply
with government and industry regulations

Protect
confidentially, integrity and availability of your resources and workloads

Establish
appropriate risk management strategies for cloud environments

Extend
controls beyond on-premises environments with governance

With our ecosystem partners, IBM Security can help address the cloud security and compliance posture management concerns:
