IBM® IMS™ Administration Tool for z/OS, V1.1

The cockpit for today's IMS DBA that puts you in control

Manage your IMS catalog, objects, copybooks, and JCL quickly and easily—all from one product

- **Leverage catalog space utilization reports**
  Show the current state of your active and pending catalog libraries for efficient planning and maintenance

- **Analyze and compare your IMS catalog and ACB libraries**
  Inspect details and pinpoint discrepancies quickly

- **Import schema from copybooks into the IMS Catalog**
  Update, interactively or in batch, individual IMS Database (DBD) definitions with schema from copybooks or in bulk during the mass import process to the IMS catalog

- **Report and validate IMS objects**
  View, add, and change DBDs and PSBs; get detailed information, and model new objects after existing objects

- **Implement consistent JCL with one-time setup**
  Enable users of any skill level to run and submit your IMS maintenance jobs worry-free

- **Submit Type 1 and Type 2 commands and review responses**
  Store commands if a system is unavailable, and issue them upon IMS restart

- **Interface with ISPUFI**
  Enter, run, and review SQL commands and output

- **Check the audit log for all functions and commands**
  Browse and search using built-in capabilities

All functions available from a traditional **ISPF interface** or a modern **Web UI** via IBM Management Console for IMS and Db2 for z/OS.
