Localization of Time Zones, additional Time Zone classifications

| Updated August 13, 2014 by [dmazzella](#) | Tags: *None*

Page Actions ▾

IBM TRIRIGA ships with a set of timezone classificationss, but it is not a complete list of all the available time zones for the different cities in the world. If you need to add a timezone for a specific locale, follow these steps to create a new Time Zone classification record.

1. Sign in to IBM TRIRIGA as an Application Administrator
2. Navigate to Home > Tools > Administration > Classifications
3. In the tree view, scroll down to Time Zones
4. Highlight and expand the Time Zones root record, and click 'New' at the top of the tree widget.
5. In the new record, the important bit is the part in the square brackets. For example, if you want to add a new timezone for Kolkata that is +05:30 GMT, in the **name** of the new Time Zone record put:

(GMT +5:30) [Asia/Kolkata] West Bengal, India

6. The other fields in the record are not required. The important bit is the part in the square brackets [Asia/Kolkata]

A full list of the complete city time zone codes can be found at: <http://joda-time.sourceforge.net/timezones.html>

Here is the list from the joda-time page:

Standard Offset	Canonical ID	Aliases
-12:00	Etc/GMT+12
