

TBSM 6.2 Upgrade to Fix Pack 1

A step by step example

Author: Gheorghe Mihaela, IBM NSA L2 Software Engineer | IBM Clouds Lab
Mihaela.Gheorghe1@ibm.com

Description

This guide has the purpose to illustrate a complete step by step example for TBSM 6.2 upgrade to Fix Pack 1 including the additional steps needed to be followed in case the base version of TBSM 6.2 that is already installed is the one from July 2018 instead of the November 2018 version.

Download link Fix Pack 1:

<https://www-01.ibm.com/support/docview.wss?uid=ibm10876634>

The one used in this example, for linux:

<https://www-945.ibm.com/support/fixcentral/swg/selectFixes?product=ibm%2FTivoli%2FTivoli+Business+Service+Manager&fixids=6.20-TIV-BSM-LINUX-FP0001&source=SAR&function=fixId&parent=ibm/Tivoli>

List of prerequisites as described within the Readme.txt file that comes with the fix pack binary:

- This Fix pack requires IBM Tivoli Business Service Manager Version 6.2.0.0 to be installed.
- Installation Manager on your machine should be 1.8.8 or higher
- JazzSM 1.1.3 Fixpack3 (DASH 3.1.3 FP3)
- Impact 7.1.0 Fix Pack 15

Steps to install TBSM Fix Pack 1

Before installing the Fix Pack 1 it is mandatory to check the build version of the TBSM 6.2.0.0 package currently on the environment. This can be done running the versioninfo script located in the <TBSM_HOME>/bin directory.

If the utility header output shows a build date of 20181106 you only need to run steps 7 and 8 without the additional steps for the old release!!

If the utility header output shows a built date of 2018072 then follow all the steps described in this document.

Example:

```
[root@mirkl tmp]# /Miha/opt/IBM/tivoli/tbsm/bin/versioninfo
=====
TBSM Version Utility:  Build date: 6.2.0. - 201807231316
=====
Gathered:    Thu May 30 06:37:18 PDT 2019
```

1. Download the refresh TBSM 6.2.0.0 Installation package. The following are the updated TBSM 6.2.0.0 base install packages with a build date of **20181106**:

CNXG3ML IBM Tivoli Business Service Manager V6.2 Linux 64-bit Multilingual
TBSM_V6.2_LINUX_64_BIT_MULTI.zip

CNXG4ML IBM Tivoli Business Service Manager V6.2 AIX 64-bit Multilingual
TBSM_V6.2_AIX_64_BIT_MULTI.zip

CNXG5ML IBM Tivoli Business Service Manager V6.2 Windows 64-bit Multilingual
TBSM_V6.2_WIN_64_BIT_MULTI.zip

2. Determine location where the original installation package was placed. This is the location of the original repositories directory that were used for TBSM installation. This can be done by example by running Installation Manager imcl "command line" utility to list the installed packages.

Command: `/opt/IBM/InstallationManager/eclipse/tools/imcl listInstalledPackages -verbose`

Example:

```
[root@mirk1 tmp]# /Miha/opt/IBM/InstallationManager/eclipse/tools/imcl listInstalledPackages -verbose
```

Look for the "Repository" information associated with both the Dashboard and Data Server applications. For example:

```
[Package]
Name: IBM Tivoli Business Service Manager Data Server (com.ibm.tivoli.tbsm.Dataserver)
Version: 6.2.0.0 (6.2.0.20180723 1407)
Repository: /tmptbsm/data_linux/data_media_linux/disk1
Features:
```

```
[Package]
Name: IBM Tivoli Business Service Manager Dashboard Server (com.ibm.tivoli.tbsm.dashserver)
Version: 6.2.0.0 (6.2.0.20180723 1407)
Repository: /tmptbsm/dash_linux/dash_media_linux/disk1
```

3. Backup or rename the repository locations (identified at step 2) for each of the TBSM components (Data and Dashboard Server).

```
/tmptbsm/data_linux/data_media_linux/disk1
/tmptbsm/dash_linux/dash_media_linux/disk1
```

```
mv /tmptbsm /tmptbsm.old
```

4. Replace the old version (build 20180723) with the new base build version (build 20181106) by extracting the new downloaded Installation package into the same location where the initial one was present.

```
mkdir /tmpbtsm
unzip TBSM_V6.2_LINUX_64-BIT_MULTI.zip -d /tmpbtsm
```

5. Copy data server and dash server offerings jar files of the new Installation package of TBSM 6.2 into the Offerings directory of your Installation Manager.

Offerings directory of Installation Manager:

```
/var/ibm/InstallationManager/installRegistry/metadata/Offerings/
```

Files needed to be copied into the above directory:

```
com.ibm.tivoli.tbsm.Dataserver_6.2.0.20181106_0249.jar
com.ibm.tivoli.tbsm.Dataserver_6.2.0.20181106_0249_SE.jar
com.ibm.tivoli.tbsm.dashserver_6.2.0.20181106_0249.jar
com.ibm.tivoli.tbsm.dashserver_6.2.0.20181106_0249_SE.jar
```

Their current location is under the extracted location of TBSM 6.2 base package (Nov edition):

```
/tmpbtsm/data_linux/data_media_linux/disk1/md/Offerings
/tmpbtsm/dash_linux/dash_media_linux/disk1/md/Offerings
```

```
[root@mirk1 tmpbtsm]# cd /tmpbtsm/data_linux/data_media_linux/disk1/md/Offerings
[root@mirk1 Offerings]# ls
com.ibm.tivoli.tbsm.Dataserver_6.2.0.20181106_0249.jar  com.ibm.tivoli.tbsm.Dataserver_6.2.0.20181106_0249_SE.jar  toc.xml
```

Therefore, commands to be run:

```
cp
/tmpbtsm/data_linux/data_media_linux/disk1/md/Offerings/com.ibm.tivoli.tbsm.Dataserver_6.2.0.20181106_0249.jar /var/ibm/InstallationManager/installRegistry/metadata/Offerings/
```

```
cp
/tmpbtsm/data_linux/data_media_linux/disk1/md/Offerings/com.ibm.tivoli.tbsm.Dataserver_6.2.0.20181106_0249_SE.jar /var/ibm/InstallationManager/installRegistry/metadata/Offerings/
```

```
[root@mirk1 Offerings]# cp /tmpbtsm/data_linux/data_media_linux/disk1/md/Offerings/com.ibm.tivoli.tbsm.Dataserver_6.2.0.20181106_0249.jar
/var/ibm/InstallationManager/installRegistry/metadata/Offerings
[root@mirk1 Offerings]# cp /tmpbtsm/data_linux/data_media_linux/disk1/md/Offerings/com.ibm.tivoli.tbsm.Dataserver_6.2.0.20181106_0249_SE.j
ar /var/ibm/InstallationManager/installRegistry/metadata/Offerings/
```

```
cp
/tmpbtsm/dash_linux/dash_media_linux/disk1/md/Offerings/com.ibm.tivoli.tbsm.dashserver_6.2.0.20181106_0249_SE.jar /var/ibm/InstallationManager/installRegistry/metadata/Offerings/
```

cp

/tmptbsm/dash_linux/dash_media_linux/disk1/md/Offerings/com.ibm.tivoli.tbsm.dashserver_6.2.0.20181106_0249.jar /var/ibm/InstallationManager/installRegistry/metadata/Offerings/

```
[root@mirk1 Offerings]# cp /tmptbsm/dash_linux/dash_media_linux/disk1/md/Offerings/com.ibm.tivoli.tbsm.dashserver_6.2.0.20181106_0249_SE.jar /var/ibm/InstallationManager/installRegistry/metadata/Offerings/
[root@mirk1 Offerings]# cp /tmptbsm/dash_linux/dash_media_linux/disk1/md/Offerings/com.ibm.tivoli.tbsm.dashserver_6.2.0.20181106_0249.jar /var/ibm/InstallationManager/installRegistry/metadata/Offerings/
```

6. Edit toc.xml to add the recently added Offerings jar files

vi /var/ibm/InstallationManager/installRegistry/metadata/Offerings/toc.xml

Check the number of items you have at the beginning of the script and increase it by 2.

example:

from 14:

```
root@mirk1:tmptbsm/data_linux/data_media_linux/disk1/md/Offerings
<?xml version='1.0' encoding='UTF-8'?>
<?toc version='0.0.1'?>
<toc fileCount='14'>
<file name='com.ibm.eis.agent_1.8.0.000_20180212_1417.jar' size='126
```

to 16:

```
<?xml version='1.0' encoding='UTF-8'?>
<?toc version='0.0.1'?>
<toc fileCount='16'>
```

At the end of the file add the following entry for the dataserver jar files that were added:

```
<file name='com.ibm.tivoli.tbsm.Dataserver_6.2.0.20181106_0249.jar' size='8520'
md5='4a35b62d7ac8d7c4e74a96da6c97aa35' name2='
com.ibm.tivoli.tbsm.Dataserver_6.2.0.20181106_0249_SE.jar' size='60811'
md52='c9766b8320ff8db9b92f06684806653e' />
```

```
com.ibm.tivoli.tbsm.Dataserver_6.2.0.20180723_1407_SE.jar' size2='60775' md52='67769e784c121e9a039059e1a7a2a40' />
<file name='com.ibm.tivoli.tbsm.dashserver_6.2.0.20180723_1407.jar' size='15769' md5='19f4d3e6e6e0cd3bba1910225cfe03' name2='com.ibm
.tivoli.tbsm.dashserver_6.2.0.20180723_1407_SE.jar' size2='38874' md52='45648001daleeaedaf015a0936a34e9' />
<file name='com.ibm.tivoli.tbsm.Dataserver_6.2.0.20181106_0249.jar' size='8520' md5='4a35b62d7ac8d7c4e74a96da6c97aa35' name2='com.ibm.tiv
oli.tbsm.Dataserver_6.2.0.20181106_0249_SE.jar' size='60811' md52='c9766b8320ff8db9b92f06684806653e' />
```

as well as the following entry for the dash jar files that were added:

```
<file name='com.ibm.tivoli.tbsm.dashserver_6.2.0.20181106_0249.jar' size='15770'
md5='f96bdf0bbd2aa60fe6887d6e5a0ce7db'
name2='com.ibm.tivoli.tbsm.dashserver_6.2.0.20181106_0249_SE.jar' size2='38879'
md52='ecdd458e87905efa0cb5fac7aaf6fc0d' />
```

```
<file name='com.ibm.tivoli.tbsm.dashserver_6.2.0.20181106_0249.jar' size='15770' md5='f96bdf0bbd2aa60fe6887d6e5a0ce7db' name2='com.ibm.tivoli.tbsm.dashserver_6.2.0.20181106_0249_SE.jar' size2='38879' md52='ecdd459e87905efa0cb5fac7aaf6fc0d' />
```

All non-vital programs should be closed prior to installation of the Fixpack. This includes the Impact Data and Dashboard servers, as well as, JazzSM (hosting the TBSM Dashboard Server).

7. Run the update script for the TBSM Data Server component

Go to the directory where you have extracted fix pack 1 and select the data_linux component. If needed, add the necessary permissions for the scripts to be executed.

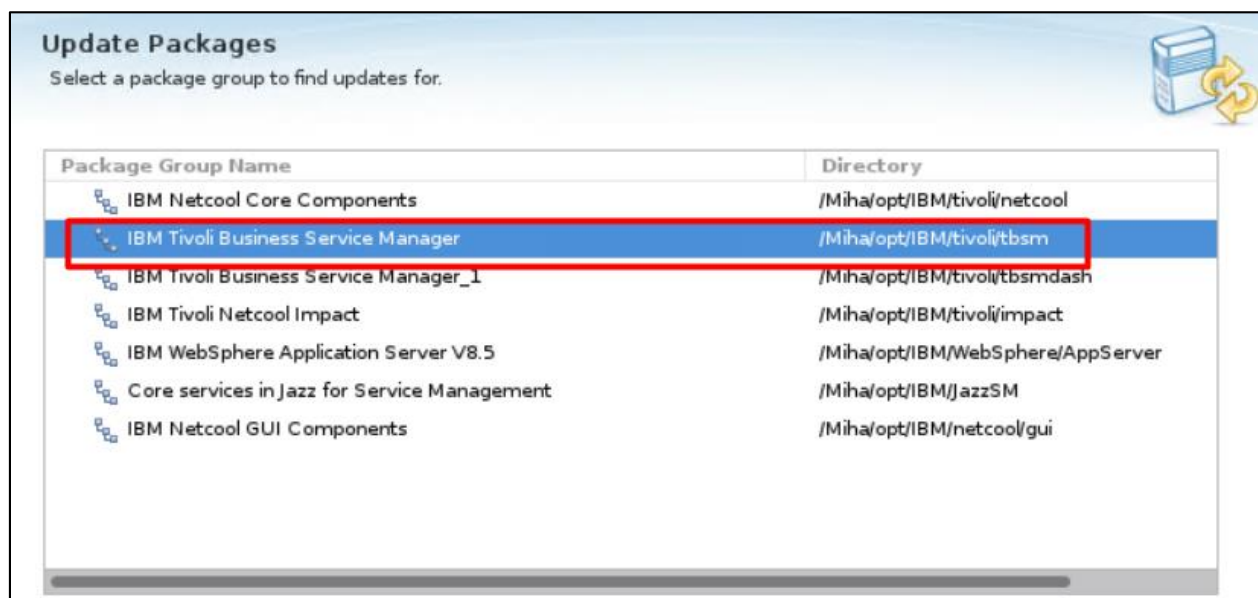

```
[root@mirkl data_linux]# ls
linux  scripts  update_console_linux.sh  update_gui_linux.sh  update_silent.sh
[root@mirkl data_linux]# pwd
/tmp/tbsmfp/6.20-TIV-BSM-LINUX-FP0001/data_linux
```

```
[root@mirkl data_linux]# chmod 777 update_*
[root@mirkl data_linux]#
[root@mirkl data_linux]#
[root@mirkl data_linux]# ls
linux  scripts  update_console_linux.sh  update_gui_linux.sh  update_silent.sh
```

For example, for installing via gui mode, run update_gui_linux.sh script:

```
[root@mirkl data_linux]# ./update_gui_linux.sh
```

Select the TBSM Data server package:

The screenshot shows a window titled "Update Packages" with the instruction "Select a package group to find updates for." Below this is a table with two columns: "Package Group Name" and "Directory". The table lists several package groups, and the "IBM Tivoli Business Service Manager" row is highlighted with a blue background and a red border.

Package Group Name	Directory
IBM Netcool Core Components	/Miha/opt/IBM/tivoli/netcool
IBM Tivoli Business Service Manager	/Miha/opt/IBM/tivoli/tbsm
IBM Tivoli Business Service Manager_1	/Miha/opt/IBM/tivoli/tbsmdash
IBM Tivoli Netcool Impact	/Miha/opt/IBM/tivoli/impact
IBM WebSphere Application Server V8.5	/Miha/opt/IBM/WebSphere/AppServer
Core services in Jazz for Service Management	/Miha/opt/IBM/JazzSM
IBM Netcool GUI Components	/Miha/opt/IBM/netcool/gui

8. Run the update script for the TBSM DASH Server component

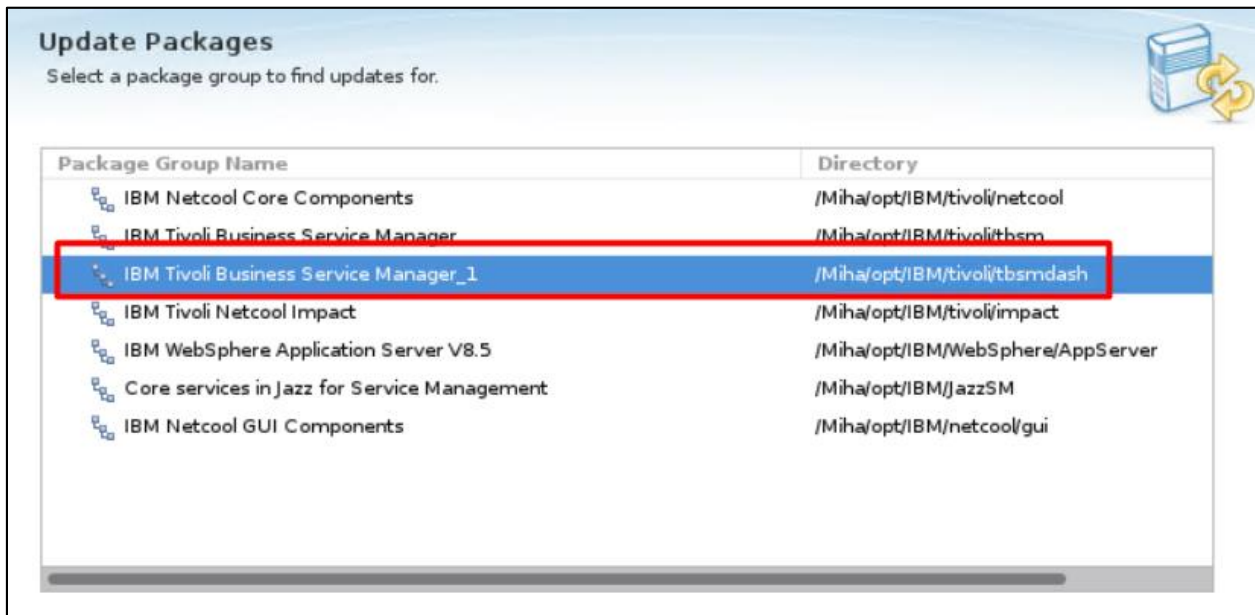

Go to the directory where you have extracted fix pack 1 and select the dash_linux component. If needed, add the necessary permissions for the scripts to be executed.

```
[root@mirkl data_linux]# cd ../dash_linux/
[root@mirkl dash_linux]# ls
linux  scripts  update_console_linux.sh  update_gui_linux.sh  update_silent.sh
[root@mirkl dash_linux]# chmod 777 update*
[root@mirkl dash_linux]# ls
linux  scripts  update_console_linux.sh  update_gui_linux.sh  update_silent.sh
```

For example, for installing via gui mode, run update_gui_linux.sh script:

```
[root@mirkl dash_linux]# ./update_gui_linux.sh
```

Select the TBSM Dash server package:
