Known issues

No known issues.

Installation information

You can apply this fix directly on Content Collector 4.0.1 fix pack 15 (4.0.1.15).

Notes:

- When following the instructions, replace < ICC_installation_directory> with the name of your Content Collector installation directory.
- If the installation directory path contains space, you must use Windows short names while navigating. For example:

Directory path with spaces: $C:\Program\ Files\ (x86)\IBM\ContentCollector$ should be written as **Desired path**: $c:\progra\sim 2\IBM\ContentCollector$.

You can find the short name for a directory by running this command: dir/x.

Installing IBM Runtime Environment Java Technology Edition

The following section provides information on how to install IBM Runtime Environment Java Technology Edition.

Prerequisite

1. Download and extract the fix files for your operating system from the IBM Fix Central to a temporary directory:

https://www.ibm.com/support/fixcentral/swg/selectFixes?parent=Enterprise%2BContent%2BManagement&product=ibm/Information+Management/Content+Collector&release=4.0.1.15&platform=ALL&function=fixId&fixids=4.0.1.15-IBM-ICC-IF009&includeRequisites=1&includeSuperse

For example, for Windows operating system, you need to extract from following compressed folder: 4.0.1.15-IBM-ICC-WIN-IF009.zip

2. The Java fixes are available in the folder named java.

Installing

- 1. Close the Content Collector Configuration Manager and stop the following services:
 - a. All the services on IBM Content Collector Server
 - b. For CM8 Text Search Support 4.0.1.9 to 4.0.1.12:

DB2EXT Service on CM8 Server

Note: CM8 Text Search Support 4.0.1.8 and earlier use Java 6, and this Content Collector interim fix is applicable only for Java 8.

2. Take a backup of the respective Java directory present within the Content Collector product directory. If you used the default location for installation, the paths are as follows:

Component	Platform	Default location
Server	Windows	<icc_installation_directory>/java</icc_installation_directory>
CM8 Text Search Support	Windows	C:/Program Files (x86)/IBM/ICCIndexer/java
CM8 Text Search Support	Unix	/opt/IBM/ICCIndexer/java

- 3. Replace the contents of the Java directory in your installation folder (from Step 2) with the fix file for your operating system.
- 4. Start the services you stopped in Step 1.

Uninstalling

The following sections provide information on how to uninstall IBM Runtime Environment Java Technology Edition and rollback Ant.

1. Close the Content Collector Configuration Manager and stop the following services:

- a. All the services on IBM Content Collector Server
- b. For CM8 Text Search Support 4.0.1.9 to 4.0.1.12:

DB2EXT Service on CM8 Server

- 2. Navigate to the Java directory and replace the files with the backup taken in Step 2 of installation.
- 3. Start the services you stopped in Step 1.

Fixes and changes

This interim fix addresses the following security vulnerabilities in the IBM Runtime Environment Java Technology 8 used by Content Collector.

Security vulnerabilities

IBM Runtime Environment Java Technology Edition

1. A flaw in the NIO component leads to incorrect conversion of java.net.URI objects to java.nio.file.Path objects, which allows an attacker to access or modify arbitrary files or directories. This is related to CVE-2023-21968 from the April 2023 CPU. This fix ensures that URIs are converted to Paths correctly.

CVE-2023-22049 - https://cve.mitre.org/cgi-bin/cvename.cgi?name=CVE-2023-22049

2. A flaw in the CertPath component (java.security.cert.CertPath*) allows an attacker to inflict a denial of service by presenting a maliciously crafted certificate chain for validation. This fix ensures that certificate chains constructed are handled gracefully.

CVE-2023-22081 - https://cve.mitre.org/cgi-bin/cvekev.cgi?kevword=CVE-2023-22081

3. A flaw in the ORB deserlization implementation allows an attacker to induce outbound network connections via specially crafted serialized object data. This fix corrects the flaw.

CVE-2023-22067- https://cve.mitre.org/cgi-bin/cvename.cgi?name=CVE-2023-22067
