**IBM® GDPS® and Server Time Protocol (STP) Application Qualification support for the Adtran FSP 3000\* Dense Wavelength Division Multiplexer (DWDM) Platform running software releases 22.1.1 and 22.1.3**

International Business Machines Corporation and Adtran Inc. have successfully completed application qualification testing of the Adtran FSP 3000\* Dense Wavelength Division Multiplexer (DWDM) Platform running software releases 22.1.1 and 22.1.3 for the following IBM Z®, Parallel Sysplex® and Geographically Dispersed Parallel Sysplex™(GDPS), IBM z16™ Model A01 (z16 A01), IBM z16™ Model A02 (z16 A02), IBM z16™ Rack Mount (z16 Rack Mount), IBM z15™ Model T01 (z15 T01), IBM z15™ Model T02 (z15 T02), IBM z14® (z14), IBM z14 Model ZR1 (z14 ZR1) environments:

- GDPS / Peer-to-Peer Remote Copy (PPRC) (Metro Mirror) using the following protocols:
  - High Performance FICON for IBM Z (zHPF®) & FICON for Storage Access
  - FCP for disk mirroring
  - 10G RoCE based Coupling Express® Long Reach (10G CE LR) or 1x InfiniBand (1x IFB)<sup>5</sup> for exchanging Server Time Protocol (STP) messages to provide synchronization of servers
- GDPS / Extended Remote Copy (XRC) (z/OS Global Mirror) using zHPF & FICON for asynchronous remote copy
- 10/25GbE RoCE Express<sup>2</sup> feature (Remote Direct Memory Access over Converged Ethernet) using Shared Memory Communications – Remote Direct Memory Access (SMC-R)

Distances for the protocols supported for these GDPS applications are defined in the Qualification Results Summary below. Longer distances may be approved but require IBM RPQ –8P2981 (z16 A01, z15 T01, z14), 8P2781 (z16 A02, z16 Rack Mount, z15 T02, z14 ZR1). Additional testing may be required to approve the RPQ.

**Qualification Results Summary:**

The Adtran FSP 3000\* Dense Wavelength Division Multiplexer (DWDM) Platform running software releases 22.1.1 and 22.1.3 met IBM Qualification criteria for protocols listed in the table below.

<sup>1</sup> The FSP 3000 and 3000CC do not perform link data rate auto-negotiation. Therefore, use of these platforms for FCP requires cascaded Directors/switches to set the link data rate.

<sup>2</sup> DWDM client modules that support 10GbE RoCE Express for SMC-R are noted in the table above with <sup>R</sup>. DWDM client modules that support both 10GbE RoCE Express for SMC-R and 25GbE RoCE Express for SMC-R are noted in the table above with <sup>RR</sup>.

<sup>3</sup> The OPPM, RSM, or protection schemes cannot be used alone; they must be used in conjunction with client layer protection to ensure cross site connectivity is not lost during a switchover.

<sup>4</sup> To ensure bi-directional protection switching, at least one module pair in the system must support an APS channel. DWDM client modules that support APS are noted in the table above with <sup>A</sup>. The OPPM must be configured for channel card trigger in conjunction with APS.

<sup>5</sup> PS-IFB is not supported on the z16 A01, z16 A02, z16 Rack Mount, z15 T01, z15 T02, or z14 ZR1.

<sup>6</sup> Y-cable/power splitter protection is only supported for use with the 5TCE card variants.

\*Note: Fujitsu OEMs the Adtran FSP 3000 under the name "Flashwave 7420". The Fujitsu Flashwave 7420 branded platform has also been tested and qualified at release level 22.1.1 and 22.1.3 for all protocols and distances included in this qualification letter. Adtran FSP 3000CC\* Dense Wavelength Division Multiplexer (DWDM) Platform has been tested as a sub shelf with Fujitsu Flashwave 7420

**GDPS Application Limitations:**

- IBM GDPS support is limited to DWDM product applications which utilize point-to-point fixed dark fiber network interconnect between Parallel Sysplexes.

- DWDM end-to-end networks, including DWDM components, transport elements and dark fiber links, must not exceed the equivalent of 900 meters differential delay between transmit and receive paths used for GDPS links for Server Time Protocol (STP) message passing (which includes 10G CE LR and 1x IFB links).
- Fiber-based dispersion compensation units that have not been qualified by IBM are not supported for STP applications.
- Redundant DWDM platforms, utilizing two site-to-site fiber pairs over diverse routes, are recommended for fiber trunk protection of links used for STP message passing (10G CE LR and 1x IFB). STP links should connect using different trunk switching modules to ensure that a fiber trunk protection event does not interrupt all timing links simultaneously.

Results achieved were in a test environment under laboratory conditions. IBM does not make any representations or warranties regarding Adtran products. Adtran retains sole responsibility for its products, the performance of such products and all claims relating to such products, including without limitation its products' compliance with product specifications, industry standards and safety and other regulatory requirements.
