graphql_response_top_type_counts	Object	GraphQL APIs only. The number of times that an object of each type was retrieved by the given query. This field is stored in JSON format and is not indexed, so it is not available for visualizations. A limited number of query requests and responses are stored for each entry, based on the amount of data that each contains. The maximum amount of data that can be stored is subject to change.
headers.field_name	String	A component of the header section of a message. Note: The following types of headers are considered sensitive and will not show in analytics data for security reasons: <ul style="list-style-type: none"> <li>Any secret key configured in the API security</li> <li>Any header that contains <b>secret</b></li> <li>Any header that contains <b>Authorization</b></li> </ul>
host	String	The host name or IP address.
http_user_agent	String	The value of the User Agent header on the inbound request.
immediate_client_ip	String	The client IP address that is directly in front of the gateway. In most cases this is a load balancer.
latency_info.started	Number	The time delay (in milliseconds) between when the request was received and when the corresponding task was started by the gateway. Starting a task comprises multiple steps to prepare for executing an API; for example, completing the TCP/TLS handshake, verifying an app's client ID and secret, and matching the request URI to a Catalog, API, and Plan. When the gateway receives a request, the "Start" duration is set to 0. The duration of each step within the Start task is then added up, and the total represents the duration of the Start task.
latency_info.task	String	The API transaction that was processed.
log_policy	String	The defined logging policy. Values include none, event, headers, and payload.
org_id	String	The identifier for the provider organization that owns the API and associated Products.
org_name	String	The name of the provider organization that owns the API and associated Products.
plan_id	String	The Plan identifier.
plan_name	String	The name of the Plan. Note: The data indicates <b>N/A</b> when a client ID is not used or is invalid on the API. The gateway needs a client id to determine which app was invoking the API. From this app, the gateway can determine what plan the app is subscribed to on the product that contains the API. Without a client ID, the gateway is unable to determine what plan, product, or app was invoked because a single API can belong to multiple products (each of which have multiple plans and apps subscribed to those plans with client IDs).
plan_version	String	The version number of the Plan.
product_name	String	The Product name. Note: The data indicates <b>N/A</b> when a client ID is not used or is invalid on the API. The gateway needs a client id to determine which app was invoking the API. From this app, the gateway can determine what plan the app is subscribed to on the product that contains the API. Without a client ID, the gateway is unable to determine what plan, product, or app was invoked because a single API can belong to multiple products (each of which have multiple plans and apps subscribed to those plans with client IDs).
product_title	String	The title of the Product.
product_version	String	The version number of the Product.
query_string	String	The URL query string value on the inbound request.
rate_limit.count	Number	The number of API calls made in the defined rate limit time window.
rate_limit.limit	Number	The maximum number of requests an application is allowed to make to the API during a specified time window.
rate_limit.period	Number	The time window that is used to set a rate limit for API calls.
rate_limit.reject	String	An indication of whether calls that exceed the specified rate limit will be rejected. If true, the API call will be rejected with a 429 status code. If false, a record is created in the Activity log.
rate_limit.shared	String	An indication of whether the rate limit is shared at a Plan level by all operations, or whether a rate limit is specified on individual operations.
request_body	String	The body of the inbound request.

Field name	Type	Description
request_http_headers.field_name	String	A component of the HTTP header section of the inbound request; for example, the acceptable encodings, the identification string for the user agent, or the proxies through which the request was sent.
request_method	String	The method of the inbound request.
request_protocol	String	The protocol of the inbound request.
resource	String	The name of the operation.
resource_id	String	The operation identifier.
resource_path	String	The operation path.
response_body	String	The body of the outbound response.
response_http_headers.field_name	String	A component of the HTTP header section of the outbound response; for example, the MIME type of the content or the data and time when the message was sent.
status_code	String	The status code set on the outbound response.
time_to_serve_request	Number	The time elapsed (in milliseconds) from when the request was received by the backend application to when it sent a response.
transaction_id	String	The identifier for the API transaction.
uri_path	String	The URI path on the inbound request.

## Example: Event record with invocation details (activity logging setting)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Administering user access

If you have permission to administer users in IBM® API Connect, you can add and delete users. After users are removed from an organization through deletion, the user account remains in API Manager.

### About this task

You can also authorize users to perform different roles within your organization. To make any changes to the users that can access your organizations, use the followings tasks:

- [Setting the expiration for invitations](#)  
Set a time-out for invitations to expire.
- [Configuring notifications](#)  
Specify the sender name and email address to use for email notifications. You can preview the templates and customize the text if required. You can also style the notifications to match your business theme.
- [Viewing your user information](#)  
You can view the users that can access your IBM API Connect organization.

- [Adding provider organization users and assigning roles](#)  
If you have the permissions that are required to edit users in API Connect, you can add users to your provider organization, remove users, assign roles and perform other user administration tasks.
- [Creating custom roles](#)  
If you have permission to edit roles in IBM API Connect, you can create custom roles, and assign permissions, in a provider organization. You can create as many custom roles as you want.
- [Removing a user from a provider organization](#)  
If you have permission to edit users, you can remove a user from a provider organization.
- [Configuring LDAP group mappings on API Manager user roles](#)  
As an API Manager administrator, you can configure LDAP group mapping on API Connect roles in a provider organization by using the developer toolkit CLI.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Setting the expiration for invitations

Set a time-out for invitations to expire.

### About this task

Invitations contain a link, which expires after the specified the timeout.

### Procedure

1. In API Manager, click  Settings.
2. In the Settings navigation list, click Onboarding, then click Edit.
3. To specify a timeout value, select or type an integer value in the Number field and then choose a unit of time (Seconds, Minutes, or Hours) in the Unit field.
4. Click Save.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Configuring notifications

Specify the sender name and email address to use for email notifications. You can preview the templates and customize the text if required. You can also style the notifications to match your business theme.

### About this task

The API Manager emails are sent automatically when certain system events occur. The email templates are organized by scope, as explained in Table 1.

Table 1. Notification scopes

Scope	Events that trigger the notification
catalog	Activities related to Catalogs; such as application life cycle events, invitations to catalogs, product approvals, and subscription approvals.
consumer	Activities to consumer applications and subscription requests in the Developer Portal, invitations to Consumer organizations, and password reset requests for Developer Portal accounts.
provider	Invitations.
space	Invitations.

One of the following roles is required to configure email notifications:

- Administrator
- Owner
- A custom role with the **Settings:Manage** permission

**Note:** You can also customize notifications by using the developer toolkit CLI, or by using the API Connect REST APIs. See [API development and management commands](#), or [API Connect REST APIs](#), for more information.

### Procedure

1. In API Manager, click  Settings.
2. In the Settings navigation list, click Notifications, then click Edit.
3. Specify a sender by entering a Name and Email address, then click Save.
4. Optional: To enable template customization, move the Customize notification templates slider to the On position.  
Note: You can reload all the default notifications, as configured by a cloud administrator, by disabling and re-enabling template customization. However, doing so will overwrite any customizations that have been made. For more information on customizing notifications as a cloud administrator, see [Customizing email notification templates](#).

- To preview the text for a template, select Preview from the options menu  alongside the template name.
- To edit the text for the template, either click the template name, or select Edit in the options menu alongside the template name.  
When a template is opened, an attempt is made to get the language from the browser setting, but if this isn't possible the template defaults to English.

The text includes variables; for example, `{{catalog}}`. The notification text is based on Handlebars syntax. Most variables are enclosed in double curly braces `{{ }}`, but can be enclosed in triple curly braces `{{{ }}` to disable HTML escaping, when the variable is a URL link for example. For more information on Handlebars, see <https://handlebarsjs.com/>.

To obtain the complete list of variables that are available for a particular notification template, complete the following steps:

- Log in to the management server from the command line as a member of a provider organization; for details, see [Logging in to a management server](#). You can use the same management server URL, user name, and password in the login command that you use to log in to the API Manager user interface.
- Enter the following command:

```
apic notification-templates:get template_name --server mgmt_endpoint_url --scope org --org provider_organization --subcollection template_scope --fields variables --output -
```

where:

- `template_name` is the name of the required notification template, as displayed in the Template column in the user interface.
- `template_scope` is the scope name displayed in the Scope column alongside that template.
- `provider_organization` is the value of the `name` field for your provider organization.

For example:

```
apic notification-templates:get member-invitation --server https://myserver.com --scope org --org myorg --subcollection catalog --fields variables --output -
```

The variables that are available for the template are displayed; for example:

```
variables:
- org
- catalog
- activationLink
- expiresAt
```

The `--output -` parameter causes the command output to be written to the command line. You can specify `--output filepath` to have the output written to a .yaml file at the specified location, or omit it altogether to have a file written to the current folder.

- To view and edit the notification template in a different language, select one of the following supported languages from the View template in drop-down list:

- Chinese (Simplified)
- Chinese (Traditional)
- Czech
- Dutch
- English (US English)
- French
- German
- Italian
- Japanese
- Korean
- Polish
- Portuguese
- Russian
- Spanish
- Turkish

- Edit the Subject as required.

- Select the Content type that you want to use for the template, from HTML, PlainText, or Both. The default content type is PlainText.

An edit window for the selected content type is displayed, or both edit windows are displayed if Both is selected.

- Edit the body of the template as required.

For HTML content, only the tags and their attributes that are shown in the following table are allowed.

Table 2. List of allowed HTML tags and their attributes

HTML tag	Attribute
<a>	"class", "href", "hreflang", "style"
<em>	"class", "style"
<strong>	"class", "style"
<cite>	"class", "style"

If an HTML tag that is not allowed is used in a notification, the tag and its contents are displayed in the email as plain text.

Images can be used by adding a `<img`

`src="https://path/to/image.png"/>` tag in the template. The `src` attribute for the image must be a fully qualified web URL, and must be externally accessible so that the email recipients can access the image. It's not possible to reference local images, they must be fully qualified URLs. It's also not possible to embed or attach images or other files in the emails.

11. Click Save when done.

Note: Edits made to a template are saved only for the specific language version that is edited.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Viewing your user information

You can view the users that can access your IBM® API Connect organization.

### Procedure

To view your organization user information, complete the following steps:

In the navigation pane of the API Manager user interface, click  Members.

### Results

All of your user accounts are listed.

### What to do next

You can modify your user accounts; see [Adding provider organization users and assigning roles](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Adding provider organization users and assigning roles

If you have the permissions that are required to edit users in API Connect, you can add users to your provider organization, remove users, assign roles and perform other user administration tasks.

### About this task

There are two ways to add a user:

- Invite member - send an invitation email with an activation link that enables the user to complete the addition operation.
- Add member - specify the user and add them as a member of the provider organization immediately.

### Procedure

- To send an email invitation to a new user to register as a member of the provider organization, complete the following steps:
  1. In the navigation pane of the API Manager user interface, click  Members.
  2. Click Add > Invite member.
  3. Enter the email address of the user.
  4. Select the roles that you want to assign to the user.
  5. Click Invite.
- To specify the user and add them as a member of the Admin organization immediately, complete the following steps:
  1. In the navigation pane of the API Manager user interface, click  Members.
  2. Click Add > Add member.
  3. Select the required user registry.

Note: For a user registry to be available in the selection list, one of the following conditions must be satisfied:

    - The visibility of the user registry is set to Public.
    - The visibility of the user registry is set to Custom, and the specified list of provider organizations includes the one to which you are adding the user.

For more information, see [Setting visibility for a user registry](#).

The remaining procedure varies according to the type of the selected user registry, as follows:

- Local User Registry
  - Select whether the user is an Existing user or a New User.
    - For an existing user, complete the following steps:
      - Enter the name of an existing API Connect user that has previously been invited to register and has activated their account.
      - Select the roles that you want to assign to the user, then click Add. The user is added and their membership is immediately enabled. The specified user can log in to the API Manager user interface.
    - For a new user, complete the following steps:
      - Enter a unique user name for the new user.
      - Supply an email address, name details, and a password.
      - Select the roles that you want to assign to the user, then click Add. The user account is created, and the user membership is immediately enabled. The specified user can log in to the API Manager user interface.
- LDAP
  - Enter the name of a user that exists in the selected user registry.
  - Select the roles that you want to assign to the user, then click Add. The user is added, and the user membership is immediately enabled. The specified user can log in to the API Manager user interface with their LDAP user name.
- Authentication URL and OIDC
  - Enter the name of an existing API Connect user that has previously been invited to register and has activated their account.
  - Select the roles that you want to assign to the user, then click Add. The user is added, and the user membership is immediately enabled. The specified user can log in to the API Manager user interface.

## Results

---

The user is added to the list of provider organization members. If an email invitation was sent, the status is shown as `Pending` until the recipient of the email clicks the link in the email to complete the creation of their account, after which the status changes to `Enabled`.

## What to do next

---

The new user can access the API Manager user interface. The user's authorization within API Manager is defined by the roles that are assigned to them.

## Related tasks

---

- [Creating custom roles](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Creating custom roles

If you have permission to edit roles in IBM® API Connect, you can create custom roles, and assign permissions, in a provider organization. You can create as many custom roles as you want.

## About this task

---

You create custom roles at the provider organization level; those roles are inherited by the Catalogs and Spaces in the provider organization. You can assign permissions at the provider organization, Catalog or Space level.

For a description of the permissions, and details of the default user roles and default permissions assigned to those roles, see [API Connect user roles](#).

Note: In API Manager, the Organization Owner role has full access and cannot be edited or deleted. All other roles, including custom roles, can be deleted. If you delete a role, users lose that role. If a user loses that role, their account remains in API Manager, enabling you to add a role to the user at a future date.

## Procedure

---

To create a custom role, complete the following steps:

1. In the navigation pane of the API Manager user interface, click  Settings
2. Click Roles, then click Add.  
The Create a Role page opens.
3. Enter a role Title and an optional Summary. A Name is entered automatically.  
Note: The value in the Name field is a single string that is used to identify the role in developer toolkit CLI commands. The Title is used for display.  
To view the CLI commands to manage roles, see [apic roles](#).
4. Use the check boxes to assign permissions to the new role.
5. When you are finished, click Save.
6. To delete a role, click the options icon  alongside the role that you want to delete, click Delete, then click Delete again to confirm the role deletion.  
Note:
  - You can create and delete a role only at the provider organization level. You cannot create or delete a role at the Catalog level. Nor can you create or delete a role at the Space level.

You can, however, assign Catalog-specific permissions to the role; for details, see [Creating and configuring Catalogs](#). You can also assign Space-specific permissions; for details, see [Managing user access in a Space](#); for more information on Spaces, see [Using syndication in API Connect](#).

- If you assign Product-Drafts or Api-Drafts permissions to the role, these permissions are not inherited by the role in a Catalog or Space. These permissions apply to working with draft Products and APIs in a provider organization and are not relevant in a Catalog or Space.

## Results

---

The custom role is created and assigned the permissions that you selected.

## What to do next

---

Assign the custom role to a user.

## Related tasks

---

- [Adding provider organization users and assigning roles](#)
- [Creating and configuring Catalogs](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Removing a user from a provider organization

---

If you have permission to edit users, you can remove a user from a provider organization.

## About this task

---

After you have removed the user from your IBM® API Connect provider organization, their resources are deleted and the user cannot access any of the organization's artifacts.

Note: The user account of the deleted user remains in the associated API Connect user registry. The user can still log in to the API Manager user interface but only information links are available; there is no access to view or manage any resources.

If you later invite the same user again, they can re-activate their account. If you are using a Local User Registry, the user must re-activate their account by using the Sign Up option, **not** by completing the registration form and using the Sign Up option; attempting to re-register will fail. For details on how to invite a user to join your organization, see [Adding provider organization users and assigning roles](#).

## Procedure

---

To remove a user from a provider organization complete the following steps:

1. In the navigation pane of the API Manager user interface, click  Members.
2. Alongside the user that you want to delete, click the options icon , click Delete, then click Delete again to confirm the user deletion.  
Note: You cannot delete the owner of a provider organization.

## Results

---

The user is removed from the provider organization, and the user account remains in API Manager.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Configuring LDAP group mappings on API Manager user roles

---

As an API Manager administrator, you can configure LDAP group mapping on API Connect roles in a provider organization by using the developer toolkit CLI.

## Before you begin

---

You must have an LDAP user registry resource in the API Manager that has the `external_group_mapping_enabled` configuration set to `true`. See [Using the CLI to create an organization-specific LDAP user registry](#) for information.

One of the following roles is required to edit roles:

- Administrator
- Owner
- Custom role with the `Settings: manage permissions`

Note: The provider organization roles apply only to API Manager users. If you want to apply LDAP group mapping to Cloud Manager users, see [Configuring LDAP group mapping on Cloud Manager user roles](#). LDAP group mapping cannot be applied to Developer Portal users.

## About this task

You can map external LDAP groups to the API Connect preconfigured user roles (except for the Owner and Member roles), as well as to any custom user roles, to reflect your business needs.

Notes:

- After LDAP group mapping is enabled on a role, user onboarding always honors the group mappings.
- Once on-boarded, user membership in API Connect is valid throughout the login period (`access_token_ttl`), irrespective of any changes in the external LDAP registry. Membership is updated only on the next login, when the LDAP information is fetched and refreshed.
- One or more API Connect roles can be mapped to one or more LDAP groups, and one or more LDAP groups can be mapped to a role.
- When multiple LDAP groups are mapped to a single role, it means that a user from any one of the LDAP groups can logon to API Connect.
- If a user is removed from the external LDAP user registry, to ensure quick removal from API Connect you must also delete the user membership in API Connect.
- In API Manager you can map roles at the provider organization, Catalog and, if appropriate, Space level. However, you can only map roles at the child level of Catalog, and then the Catalog's child level of Space, if the parent level also has group mapping defined. Mapping at a child level overrides the mapping for the same role at the parent level. For example:  
If the Administrator Role at the provider organization level is mapped to the LDAP group of `cn=APIC-Administrators,ou=ibmggroups,o=ibm.com`, and the Administrator Role at a Catalog level is mapped to the LDAP group of `cn=APIC-Developers,ou=ibmggroups,o=ibm.com`, then any user that is added as a Catalog member must belong to the `cn=APIC-Developers,ou=ibmggroups,o=ibm.com` group. Note that provider organization level members that belong to the `cn=APIC-Administrators,ou=ibmggroups,o=ibm.com` group can still access the Catalog due to inheritance.

You can configure LDAP group mappings using one of the following methods:

- [Using the UI to configure LDAP group mappings](#)
- [Using the CLI to configure LDAP group mappings](#)

## Using the UI to configure LDAP group mappings

Use the API Manager UI to configure LDAP group mappings.

### Procedure

1. Login to the API Manager as a user with the appropriate permissions.
2. Click Settings > Roles > Add a new Role or edit existing role .
3. Select the following settings:
  - Enable external group mapping - select to enable external group mapping for this role.
  - LDAP user Registry - LDAP user registry list which has external group mapping enabled. User must select one of the LDAP user registry from this list.
  - LDAP group names - add one or more LDAP group names that you want to map to the user role.
  - User group prefix - add the prefix for the LDAP user group.
  - User group suffix - add the suffix for the LDAP user group.
4. Save your changes.

### Results

The role is updated with the LDAP group mapping information. Users can now log on to the API Manager, and automatically be assigned the correct access permissions for their role.

## Using the CLI to configure LDAP group mappings

Use the toolkit CLI to configure LDAP group mappings.

### About this task

For detailed information about how to use the CLI, see [Installing the toolkit](#), and [Overview of the command-line tool](#).

### Procedure

Perform the following steps to map external LDAP groups to API Manager user roles.

1. Log in to the management server CLI.  
Before you can update the role configuration, you must log in to your management server from the developer toolkit CLI as a member of a provider organization. Use the following command:

```
apic login --server mgmt_endpoint_url --username user_id --password password --realm provider/identity_provider
```

where `mgmt_endpoint_url` is the platform API endpoint URL.

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`. For full details of the login command, see [Logging in to a management server](#).

2. Run the following command to get the URL of the LDAP user registry resource in the API Manager that you want to map the user roles to:

```
apic user-registries:get ldap_user_registry --org organization_name --server mgmt_endpoint_url --output -
```

where:

- `ldap_user_registry` is the name or ID of your LDAP user registry resource.
- `organization_name` is the value of the `name` property of your provider organization.
- `mgmt_endpoint_url` is the platform API endpoint URL.

This command outputs the configuration details of your LDAP user registry, and the `url` is shown at the end of the list, for example:

```
type: user_registry
api_version: 2.0.0
id: 35e75bad-1d89-4a65-a70f-xxxxxx
name: ldap
title: LDAP
integration_url: >-
  https://server.com/api/cloud/integrations/user-registry/147b5fb1-e88e-41e3-90e9-xxxxxx
registry_type: ldap
user_managed: false
user_registry_managed: false
external_group_mapping_enabled: true
...
url: >-
  https://server.com/api/user-registries/3d58ce7e-16a8-493b-9684-xxxxxx/35e75bad-1d89-4a65-a70f-xxxxxx
```

3. Create a role yaml file that contains the following LDAP group mapping configuration properties:

```
external_group_mapping:
  user_registry_url: https://server.com/api/user-registries/3d58ce7e-16a8-493b-9684-xxxxxx/35e75bad-1d89-4a65-a70f-xxxxxx
  ldap_groups:
    - 'cn=apic-administrators,ou=ibmgroups,o=ibm.com'
    - 'cn=apic-developers,ou=ibmgroups,o=ibm.com'
  user_group_filter_prefix: (&(uniquemember=
  user_group_filter_suffix: )(objectClass=groupOfUniqueNames))
```

Where:

- `user_registry_url` is the URL of your LDAP user registry resource from Step [#task\\_apim\\_role\\_mapping\\_ldap\\_url](#).
- `ldap_groups` is a list of the LDAP group names that you want to map to the user role.
- `user_group_filter_prefix` is the prefix for the LDAP user group.
- `user_group_filter_suffix` is the suffix for the LDAP user group.

4. Run the following command to update the user role with the `external_group_mapping` configuration properties:

```
apic roles:update role_name --scope org --org organization_name --server mgmt_endpoint_url mapping_properties_file
```

Where:

- `role_name` is the name of the user role that you want to add the LDAP group mapping to.
- `--scope` is the organization level that you want the update to apply to. Valid values are:
  - `org` to apply the mapping at the provider organization level.
  - `catalog` to apply the mapping at the Catalog level.
  - `space` to apply the mapping at the Space level.
- `organization_name` is the value of the `name` property of your provider organization.
- `mgmt_endpoint_url` is the platform API endpoint URL.
- `mapping_properties_file` is the name of your mapping properties file from Step [#task\\_apim\\_role\\_mapping\\_role\\_file](#), for example `role_mapping_file.yaml`.

If you prefer to enter the configuration properties interactively on the command line, you can substitute the `mapping_properties_file` for a terminating hyphen character `-`, and enter the information manually, followed by pressing `CTRL D` to terminate the input.

If you want to create a custom role that includes LDAP group mapping, you can include the `external_group_mapping` configuration section in the `role_file`, and then create the new role by using the `apic roles:create` command.

For more information about the `apic roles` commands, see [apic roles](#) in the CLI reference section.

## Results

The role is updated with the LDAP group mapping information. Users can now log on to the API Manager, and automatically be assigned the correct access permissions for their role.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Changing your API Manager password

You can change your API Manager password in IBM® API Connect.

## Procedure

---

To change your password, complete the following steps:

1. Log in to the API Manager user interface.
2. Click the User icon  then click My Account.
3. In the Change password section, enter your current password and your new password, and confirm the new password.  
Passwords must satisfy the following requirements:

- Cannot be re-used for at least 8 password cycles
- Cannot contain more than 2 consecutive repeating characters
- Must include at least 8 characters
- Must include 1 or more characters from at least 2 of the following categories:
  - Lowercase letters
  - Uppercase letters
  - Numbers
  - Special characters – only the following special characters are allowed:

```
!
\"
#
$
%
&
\
(
)
*
+
,
-
.
/
:
;
<
=
>
?
@
[
\\
]
^
_
{
|
}
~
```

4. Click Change Password.

## Results

---

Your password is changed.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.  
For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Resolving login problems by increasing HTTP header size

You can resolve login problems for the API Manager UI by increasing the maximum HTTP client header size.

### About this task

---

Login attempts to the user interface might fail with error 502 (**Bad Gateway**). This error can occur when logging in from a browser that has a large number of cookies. The error occurs because size of the login request exceeds the maximum HTTP client header size.

The maximum HTTP client header size is limited for security reasons. To workaround this issue, you can clear the browser cache and cookies, or open an incognito window from the browser, and then retry the login.

Alternatively, you can increase the maximum HTTP client header size. Use caution when increasing the maximum size because larger headers can raise a security risk to your system.

## Procedure

---

1. **SSH** to your management system or appliance.
2. Enter the following commands:

```
kubectl get deployment -n namespace | grep apim-v2
kubectl edit deployment -n namespace apiconnect-apim-v2-deployment
```

3. In the `env` section of the deployment configuration, change `--max-http-header-size=12000` to a larger value that works for your environment. For example:

```
- name: NODE_OPTIONS
  value: --max-old-space-size=8094 --max-http-header-size=16000
```

4. Save the updated configuration.

5. Run `kubectl get pod -n namespace` a few times until the new `apiconnect-apim-v2` pod is up and running.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Reviewing a gateway's processing status

Review the processing status for the Gateway services that are enabled in your API Connect Catalogs and Spaces.

### About this task

Sometimes you might want to check the status of an API event that is being processed by the gateway. For example, you might want to ensure that a Product was published before and is available on the gateway before you invoke one of its APIs. Or perhaps it appears that API events are being processed too slowly and you want to see if all of the events for a particular gateway service are affected. You can review a gateway's processing status to see the which events were sent for processing and which events are still waiting in the queue.

Notes:

- You can only obtain processing status information for the DataPower® API Gateway. This feature is not supported for the DataPower Gateway (v5 compatible) service.
- Processing information is collected for each Catalog. If you view information for a particular Space, the display shows the results for the entire Catalog instead.

### Procedure

1. Open the Gateway services page:

- a. Log in to API Manager.
- b. In the navigation pane, click  Manage.
- c. Select a Catalog.
- d. Click the Catalog settings tab.
- e. On the Settings page, click Gateway services.

A list of all of the gateway services for the selected Catalog, including all of its Spaces, displays the gateway type and its endpoint URL. In addition, a status icon displays for each service name to provide a quick indication of that service's current status:

-  Normal: Between 0 and 10 events are waiting to be processed
-  Increased: Between 10 and 20 events are waiting to be processed
-  High: More than 20 events are waiting to be processed

You can view details about a service's status to gain insight into possible issues.

2. On the Gateway services page, click  next to a service and select View gateway processing status.

The Gateway processing status page displays a list of the events that were sent to the gateway. For each event, you can see the following information:

- Event type: The action performed by the event; for example, subscribing to a product, deleting an application, or creating a new consumer organization.
- Category: The feature area affected by the event; for example, subscriptions, applications, or consumer organizations.
- Time: The time when the event was processed by the gateway service.
- Status: The current event's processing status; for example, Queued (not yet sent for processing), Sent (but not processed yet), or Processed (complete). The number of events in the Queued and Sent states determine the status level for the service.

The display includes events that were not processed yet, as well as the last event processed. If a particular event is not listed as Sent or Queued, then that event was already processed.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Reference

Reference information for the API Manager component in IBM® API Connect.

- [API gateway response codes](#)  
When an API is called, different HTTP status codes are returned by the gateway to indicate whether the request was successfully completed.
- [Troubleshooting your billing configuration](#)  
Some issues can occur when you are setting up billing integration in IBM API Connect.

## Related information

- [IBM API Connect overview](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## API gateway response codes

When an API is called, different HTTP status codes are returned by the gateway to indicate whether the request was successfully completed.

The response codes used in IBM® API Connect correspond to the registered HTTP status codes that are typically generated to provide informational (1xx), successful (2xx), redirection (3xx), client error (4xx), or server error (5xx) responses, as described at <https://tools.ietf.org/html/rfc7231#section-6> and [Hypertext Transfer Protocol \(HTTP\) Status Code Registry](#).

In API Connect, successful responses vary depending on the API being called. Other response codes can also be generated, depending on the implementation of the assembly and the response from the external systems. The standard reasons listed for the registered HTTP status codes are considered adequate for most responses that are returned; these response codes and their causes are therefore not listed here.

In certain cases, a client or server error response code can be caused by a condition that is specific to API Connect. The following table contains a list of these error response codes and identifies possible causes for these codes being returned. For some error codes, multiple causes are possible.

Table 1. Error codes and their causes

Error Code	Cause
401 Unauthorized	<ul style="list-style-type: none"> <li>• The required client identification has not been successfully provided.</li> <li>• User authentication failed or did not take place.</li> </ul>
403 Forbidden	<ul style="list-style-type: none"> <li>• The application is not registered with the plan that is used.</li> <li>• The application is not active.</li> <li>• User authentication failed because multiple client IDs provided.</li> </ul>
404 Not Found	<ul style="list-style-type: none"> <li>• Information for the provider organization or environment was not found.</li> <li>• The API URL was not found in the organization or environment.</li> </ul>
405 Method Not Allowed	The API URL was found, but no operation was found that supports the requested HTTP verb.
406 Not Acceptable	The API cannot produce any responses that are supported by the application.
429 Too Many Requests	The rate limit has been exceeded for the plan or operation being used.
500 Internal Server Error	An error occurred while executing this request.
503 Service Unavailable	The status of an API was switched from online to offline, making the API unavailable across all Products in which it is contained. For more information, see <a href="#">Managing your Products in the API Manager UI</a> and <a href="#">Managing API Products using the developer toolkit</a> .

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Troubleshooting your billing configuration

Some issues can occur when you are setting up billing integration in IBM® API Connect.

You can use the following links to browse the issues:

1. [My customer payment is not completing with Stripe, but the Product is still being accessed.](#)
2. [My Product with billing is returning an error when I try to configure it with my Stripe account.](#)
3. [My customer previously had a Stripe subscription to a Product but can't access its billing details.](#)

### My customer payment is not completing with Stripe, but the Product is still being accessed.

When payment issues occur with the credit card payment provider, the credit card subscription is canceled, but the API Connect subscription is not canceled. You can disable an application until the payment issues are resolved by completing the following steps:

1. Navigate to the Settings page in the dashboard of your Stripe account.
2. In the Billing section navigate to the Subscriptions and emails page.
3. In the Manage failed payments section, change the Subscription status to If all retries for a payment fail, mark the subscription as unpaid.
4. Navigate to the Subscriptions page, and when the subscription has moved into the unpaid state open the subscription in the Stripe dashboard.
5. In the Metadata section, copy the subscription\_url value.

6. Use the developer toolkit CLI, and the UUID from the subscription\_url, to set the state of the application or subscription to disabled.

## My Product with billing is returning an error when I try to configure it with my Stripe account.

---

The most common cause of this is that your Developer Portal cluster servers or your Management cluster servers cannot communicate with Stripe. To resolve this, ensure that the Stripe API is enabled with HTTPS communication with your Management cluster servers and the Developer Portal on port 443. See [Firewall requirements on Kubernetes](#) and [Firewall requirements on VMware](#) for more information about this requirement.

Other causes might be issues with the subscription billing service, network stability, or the API keys might have been rolled and not updated in API Connect and the Developer Portal.

## My customer previously had a Stripe subscription to a Product but can't access its billing details.

---

There is more than one possible cause and resolution for this situation.

- The credit card transaction might not be completing correctly. If this situation happens, the subscription might be canceled with Stripe, but the API Connect subscription is not canceled. For instructions about how to disable a subscription, see [My customer payment is not completing with Stripe, but the Product is still being accessed](#).
- A recent change to a Product with billing might have triggered an action that was not completed correctly. Seemingly minor changes to the Product can start a number of actions that can overload a server. For example, when you replace a version of the Product with a new version, it starts an update to the Stripe server for every account that is subscribed to that Product. If the action fails to complete, the Plan's subscription status might not be reflected correctly with Stripe. You can identify this situation by viewing the Billing dashboard in the Resources section of the API Manager. The table displays the state of the job queue for the billing integration resource, and any issues with the job queue are displayed here. For more information about the job queue, and how to retry blocked jobs, see [Billing integration resource job queues](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Authoring policies

With the on-premise offering, you can control specific processing features in the Gateway server of IBM® API Connect by creating user-defined policies.

IBM API Connect enables organizations to easily promote business services as APIs to internal and external developer communities. API developers can rapidly create, proxy, assemble, and secure APIs through the API Manager user interface (UI). The API Manager assembly feature allows API developers to create complex REST or SOAP API operations that transform data, perform multiple service calls, aggregate data, and apply policies.

A policy is a piece of configuration that controls a specific aspect of processing in the IBM DataPower® Gateway server during the handling of an API invocation at run time. IBM API Connect provides a number of different types of policies, but you can also create user-defined policies to provide more processing control.

## When would you need a user-defined policy?

---

A user-defined policy enables you to control extra processing features in the Gateway server, such as security, or routing of requests. The user-defined policies feature is available only with the on-premise offering of IBM API Connect.

Create a user-defined policy in IBM API Connect when you need to augment the actions or activities that are performed by the API gateway. For example, you might want to perform the following operations:

- Implement your own proprietary logic for dynamic routing of requests.
- Enforce extra security constraints to your API.
- Make accessible an extra capability that is provided in DataPower that is not yet accessible in the IBM API Connect policy catalog.

**Note:** For best results, do not try to update your existing user-defined policies, because those are already in use by your APIs. Instead, create a new version of the policy that you want to update, and then modify the API assembly to use the newer version of the policy.

See the following topics for more information about user-defined policies, and how to create and import them into IBM API Connect:

- [Authoring policies for the DataPower Gateway \(v5 compatible\)](#)  
A user-defined policy for the DataPower Gateway (v5 compatible) consists of a package that contains a YAML definition file that describes the policy, together with the policy implementation files. You import the package into one or more Catalogs in your IBM API Connect environment to make the policy available to APIs that are published to those Catalogs.
- [Authoring policies for the DataPower API Gateway](#)  
A user-defined policy for the DataPower API Gateway consists of a package containing configuration details that define the actions of the policy. You publish the package to the DataPower API Gateway to make it available to APIs that are deployed there.

## Authoring policies for the DataPower Gateway (v5 compatible)

A user-defined policy for the DataPower® Gateway (v5 compatible) consists of a package that contains a YAML definition file that describes the policy, together with the policy implementation files. You import the package into one or more Catalogs in your IBM® API Connect environment to make the policy available to APIs that are published to those Catalogs.

### How do user-defined policies work?

A user-defined policy is implemented as a DataPower processing rule. After a policy is imported into an IBM API Connect Catalog, the policy is available to be placed into an assembly flow of an enforced API. When the API is published, and invoked by an application, the API Gateway executes all policies that are associated with this API. An API Gateway that is running in DataPower calls the IBM DataPower Gateway processing rules that those policies implement.

The following diagram provides an overview of how to create and execute a user-defined policy in IBM API Connect.

Figure 1. The user-defined policy process

For details on how to define and deploy user-defined policies for the DataPower Gateway (v5 compatible), see the following subtopics:

- [Describing your policy](#)  
Describe your user-defined policy by creating a definition file in YAML format to document metadata about the policy.
- [Creating a new user-defined policy](#)  
Create a user-defined policy by configuring a policy definition file and its implementation, and then packaging the policy and importing it into IBM API Connect.
- [Packaging and importing your policies into IBM API Connect](#)  
Make your user-defined policy available to API developers by packaging it and importing it into an IBM API Connect Catalog.
- [Reference](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Describing your policy

Describe your user-defined policy by creating a definition file in YAML format to document metadata about the policy.

### About this task

A policy YAML file contains the following sections:

- A specification version.
- An information section.
- An attach section.
- A properties section.
- A gateways section.

You can create a policy YAML file by using any editor of your choice. Both `.yaml` and `.yml` file extensions are supported, but the use of the `.yaml` file extension is recommended by [yaml.org](http://yaml.org).

Note: All keys and enumeration values that are specified in this topic are case-sensitive.

## Procedure

The following steps describe how to construct a policy YAML file.

1. Set the specification version by adding the following line to the beginning of the file: `policy: 1.0.0`.
2. Complete the information section with details about the policy by using the following syntax:

```
info:
  title: Title of policy
  name: shortnameofpolicy
  version: 1.0.0
  description: An example policy
  contact:
    name: name1
    url: url1
    email: email1
```

where:

- **title** is the title of the policy. Any string can be used, but the title should be kept short so that it can be displayed in the API Manager user interface.
- **name** is the short name for the policy and must contain only alphanumeric characters, the - (dash) character, and the \_ (underscore) character (blank spaces are not supported). The name is case-sensitive, and should be 20 characters or less so that it can be displayed in the API Manager user interface. In the example, the name is shown as `<policy-name>`.  
Important: The policy short name must be different from the OpenAPI names of the built-in policies, otherwise it will cause a policy conflict in the API assembly definition. For a list of the OpenAPI built-in policy names, see [execute](#). Also, consider including an appropriate unique prefix or suffix string in the short names of your user-defined policies to prevent possible name conflicts with future built-in policies.  
Note: The **name** property must be identical to the Node.js module name.
- **version** is the version number of the policy. This is a reserved property.  
Tip: The `version.release.modification` version numbering scheme is recommended, for example `1.0.0`.  
Note: The **info.version** in `policy.yaml` must match the **version** indicated in `package.json`.
- **description** (optional) is a short description of the policy.
- **contact** (optional) is the contact information for the policy, where:
  - **name** (string) is the identifying name of the contact person or organization.
  - **url** (string) is the URL that points to the contact information.
  - **email** (string) is the email address of the contact person or organization.

3. Complete the attach section by specifying which type of API flow the policy can be attached to.

```
attach:
  - rest
  - soap
```

where:

- **rest** indicates that this policy can be attached to a REST API flow.
- **soap** indicates that this policy can be attached to a SOAP API flow.

The attach section must contain at least one API flow type. If a policy can be attached to both API flow types, they must both be indicated in the attach section.

4. Complete the properties section by defining a JSON schema (based on JSON Schema Specification Draft 4, but rendered in YAML format) that contains the list of properties the policy will declare as required input. These properties are presented to the API author at development time, when the properties can be configured or mapped to values as required.

The JSON schema defines a root object that contains the following JSON properties:

- **type**
- **properties**
- **required**

The syntax and definition of these properties matches the JSON schema definition. The following code block shows an example of a simple schema that defines one required property (`a_property`):

```
properties:
  $schema: "http://json-schema.org/draft-04/schema#"
  type: object
  properties:
    a_property:
      label: a label
      description: a description
      type: a type
  required:
    - a_property
```

The root `type` of the schema must be an `object`, as shown in the example schema. You can define zero or more properties in the schema. Required properties are declared by using the `required` parameter, as shown in the example schema. The policy will not be accessible in the API Manager assembly editor, unless all the required properties have values. Each property is an object with the following items:

- **label** is a short name for the property and is displayed in the Name column of the API Manager assembly editor.
- **description** is a short description for the property and is displayed in the Description column of the API Manager assembly editor.
- **type** must be one of the following primitives that are supported:

- *integer*
  - *number*
  - *string*
  - *boolean* (this primitive is shown as a check box in the assembly editor)
  - *array*
  - **default** (optional) specifies a default value for the property.
  - **enum** (for properties with a **type** of *string*) is an array of valid values.
5. In your gateways section, specify that the policy is for the DataPower® Gateway. Enter the following code:

```
gateways:
- datapower-gateway
```

6. Save the new policy as a YAML file using the value of the **name** property (in the **info** section) as the file's name. Required: To ensure a successful import, the YAML file must use the name specified in the policy's **name** property.

## Results

You have created a user-defined policy definition YAML file that documents metadata about your policy.

## Example

The following code block shows an example of a policy definition file that contains all the supported primitives. This policy must be saved as `sampleimpl.yaml` to ensure that it can be imported into API Connect.

```
policy: 1.0.0

info:
  title: Sample Policy
  name: sampleimpl
  version: 1.0.1
  description: This is a sample policy.
  contact:
    name: Steve Product Manager
    url: http://developer.acme.com/contacturl
    email: steve-product-manager@someemailservice.com

attach:
- rest
- soap

properties:
  $schema: "http://json-schema.org/draft-04/schema#"
  type: object
  properties:
    samplestring:
      label: String Property
      description: Sample string property
      type: string
    sampleboolean:
      label: Boolean Property
      description: Sample boolean property
      type: boolean
    sampleinteger:
      label: Integer Property
      description: Sample integer property
      type: integer
    samplenumber:
      label: Number Property
      description: Sample number property
      type: number
    samplestringwithenum:
      label: Enum Property
      description: Sample string enum property
      enum:
        - one
        - two
        - three
      default: one
      type: string
    samplearray:
      label: Array of properties
      description: Sample array of properties
      type: array
      items:
        type: object
        properties:
          string:
            label: String Property
            description: Sample string property in array
            type: string
          boolean:
            label: Boolean Property
            description: Sample boolean property in array
            type: boolean
      required:
        - string
  required:
    - samplestring
    - sampleboolean
```

- `sampleinteger`
- `samplenumber`
- `samplearray`

gateways:

- `datapower-gateway`

In the following code block, an example of a policy definition file for modifying message payload is shown.

policy: 1.0.0

info:

```
title: Run GatewayScript
name: gatewayscript-policy
version: 1.0.0
description: Execute GatewayScript
contact:
  name: IBM DataPower Samples
  url: https://github.com/ibm-datapower/
  email: steve-product-manager@ibm.com
```

attach:

- `rest`
- `soap`

gateways:

- `datapower-gateway`

properties:

```
$schema: "http://json-schema.org/draft-04/schema#"
type: object
properties:
  source:
    label: "GatewayScript Source"
    description: "The location of the GatewayScript file to execute"
    type: string
    default: store:///identity.js
  value:
    label: "New Value"
    description: "The value to be added to the payload"
    type: string
    default: "Hello Policy"
```

required:

- `source`
- `value`

## What to do next

Create an implementation for your user-defined policy by using DataPower processing rules and actions. For more information, see [Implementing your policy](#).

## Related concepts

- [Authoring policies](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

DataPower Gateway (v5 compatible) only

## Creating a new user-defined policy

Create a user-defined policy by configuring a policy definition file and its implementation, and then packaging the policy and importing it into IBM® API Connect.

Review the following topics to learn how to create a user-defined policy.

Tip: Some sample policies are available on GitHub, and these policies can be downloaded and adapted for use with IBM API Connect. For more information, see [API Connect Policies on GitHub](#).

- [Implementing your policy](#)  
Create an implementation for your user-defined policy by using DataPower processing rules and actions.

DataPower Gateway (v5 compatible) only

---

# Implementing your policy

Create an implementation for your user-defined policy by using DataPower® processing rules and actions.

## Before you begin

---

You must create a policy YAML file before you create an implementation. For more information, see [Describing your policy](#).

You can create an implementation for your policy by using the usual tools available to IBM® DataPower Gateway developers. However, the DataPower user interface is typically the tool that is used to create processing rules and actions.

Note: You must be skilled in DataPower tooling and concepts, before you can create a policy implementation.

In order for your processing actions to work well under the API Gateway configuration, and also to enable the use of contextual information that is relevant to the processing actions, a library of functions and templates is available that you can use to assist you in writing the XSLT or GatewayScript transformations. This library provides the following mechanisms:

- Access to input property values (input from the assembly editor).
- Access to context values (the API Gateway runtime context).
- Access to the runtime payload message and media-type.
- Ability to modify the payload message.
- Ability to end the policy execution with an error.

## About this task

---

You create an implementation for your user-defined policy in the IBM DataPower Gateway. The implementation must adhere to the following conventions:

1. You must create a main processing rule, and this rule will be the starting point for the policy. The rule name must start with the name of the policy (the value of the **name** property in the "info" section of the policy YAML file), followed by -main; for example *checkmembership-main*.
2. There are no restrictions on what actions the processing rule can execute, on condition that the rule adheres to the naming convention in point 1. and the instructions that are detailed in this topic.
3. The names of the processing actions and all other objects also must start with the name of the user-defined policy (the value of the **name** property in the "info" section of the policy YAML file).
4. If your processing rule runs transformation actions that use XSLT or GatewayScript files, these files must be stored in the following location: `local://policy/<policy-name>`.
5. If you have certificate and key files that must be stored in the `cert:` folder, the names of these files also must start with the name of the user-defined policy (as defined in the policy YAML file).
6. If your policy is using GatewayScript transformations, your policy code must require `apim.custom.js`, for example:

```
var apic = require('local://isp/policy/apim.custom.js');
```

The following steps describe how to create an implementation for your user-defined policy:

- [Create a main processing rule](#).
- [Create one or more processing actions:](#)
  - [Configure access to input properties](#).
  - [Configure access to the runtime context](#).
  - [Configure access to the input payload](#).
  - [Configure access to the HTTP headers](#).
  - [Modify the payload in XSLT or gatewayscript](#).
  - [Configure the implementation to produce error information](#).
  - [Set variables](#).
- [Export your policy implementation](#).

## Procedure

---

1. Create a main processing rule that is called `<policy-name>-main` where `<policy-name>` is the name of your user-defined policy (the value of the **name** property in the "info" section of the policy YAML file).

Note: You must specify the following processing rule settings:

- Rule direction: Both Directions
- Non-XML Processing: on

2. Create one or more processing actions.

Each processing action should have a unique name and must start with the name of the user-defined policy (as defined in the policy YAML file).

Note: Different processing actions in DataPower might require different releases of the DataPower firmware. When using the GatewayScript actions, the minimum DataPower firmware that should be used is version 7.2.0.

The following processing actions are available:

- Configure access to the input properties in XSLT (`policyProperties`), or in GatewayScript (`apic.getPolicyProperty`).  
If required by the properties that are defined in the policy YAML file, when the policy is attached to an API the API developer must enter the input settings or variables for a particular property. This function provides the mechanism to retrieve these input settings or variables at run time. For an example code snippet, see [Access to input properties code snippet](#).
- Configure access to the runtime context in XSLT (`getContext`), or in GatewayScript (`apic.getContext`).  
When an API is invoked, runtime information about the request can be accessed by using a user-defined policy, and this information is known as the runtime context. The function `getContext` provides the mechanism to access this runtime context. For an example code snippet, see [Access to runtime context code snippet](#). For a complete list of context variables, see [API Gateway context variables](#).
- Configure access to the input payload in XSLT (`payloadRead`), or in GatewayScript (`apic.readInput(callback`)).

Some policies require access to the input message or payload that is provided by the application. Accessing the input message or payload during an assembly flow can be difficult, as this information might change as the policies and the assembly steps run. This function provides a mechanism to get the correct input message or payload at the time of policy execution. For an example code snippet, see [Access to input payload code snippet](#).

This function returns an XML node-set that contains the payload of the request. If the payload is in JSON format, a JSONx node-set is returned that can then be manipulated within an XSLT or GatewayScript stylesheet. If the payload is not in JSON or XML format, the node-set that is returned is empty.

Note: The `payloadType ()` function can be called to determine what type of payload (XML or JSONx) will be returned by the `payloadRead ()` or the `apic.readInput (callback)` function.

- Configure access to the HTTP headers in XSLT (`getContext`), or in GatewayScript (`apic.getContext`).

The HTTP header information of a request can be retrieved from the request context. The HTTP header names are normalized to lowercase. The function `getContext ()` provides the mechanism to access the HTTP header information. For an example code snippet, see [Access to HTTP headers code snippet](#).

Note: Access or modification of HTTP headers by using DataPower extensions, such as `dp:set-request-header`, is not advisable, as such actions might yield unexpected results when the policy is combined with other policies and assembly steps.

- Modify the payload in XSLT or GatewayScript.

When a policy implementation is required to change a payload message, you must configure the DataPower Transform Processing Action to set the Output context field to `OUTPUT` (referred to as the `OUTPUT` named context).

The output must be an XML node-set, which represents an XML or SOAP message, or a JSON message by using JSONx. To assist the API Gateway policy framework to accept the new or transformed message, call the `apim-output` template. For an example code snippet, see [Modify the payload code snippet](#).

Note: The modify the payload processing action works only with a proxy task. An HTTP or web service task always overwrites the output of a policy implementation.

- Configure the implementation to produce error information.

If you require your policy implementation to produce error information when there is a failure, you must configure the implementation by calling the error template. For an example code snippet, see [Configure error information code snippet](#).

- Set variables.

Use the `setVariable` template to set a runtime variable to a specified string value. This value can then be retrieved by using the function `getVariable ()`, or by mapping the value into a step. For an example code snippet, see [Set variables code snippet](#).

### 3. Export your policy implementation from DataPower.

From the DataPower user interface, export the objects and files that are referenced by your main processing rule as a compressed file. No other objects or files should be exported. The following file list is an example configuration of an export from DataPower:

Archive: `checkmembership.zip`

```
11819 11-19-2014 22:53 dp-aux/basetypes.xml
3028207 11-19-2014 22:53 dp-aux/drMgmt.xml
6456 11-19-2014 22:53 dp-aux/map-dmz.xml
7299 11-19-2014 22:53 dp-aux/management.xml
23130 11-19-2014 22:53 dp-aux/SchemaUtil.xml
216003 11-19-2014 22:53 dp-aux/cliiform.xml
5284 11-19-2014 22:53 local/policy/checkmembership/check.xml
5061 11-19-2014 22:53 export.xml
```

The example shows the exported configuration file (`export.xml`) that contains all the processing actions and DataPower objects, the referenced files, and the DataPower configuration schemas that are created by using the configuration export in the DataPower user interface.

## Results

You have created an implementation for your user-defined policy and exported this implementation from the DataPower user interface.

## What to do next

Create a user-defined policy package that can then be imported into IBM API Connect. For details, see [Packaging and importing your policies into IBM API Connect](#).

## Related concepts

- [Authoring policies](#)

## Related information

- [IBM DataPower Gateway](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

DataPower Gateway (v5 compatible) only

## Packaging and importing your policies into IBM API Connect

Make your user-defined policy available to API developers by packaging it and importing it into an IBM® API Connect Catalog.

## Before you begin

Before you can package a user-defined policy and import it into IBM API Connect, you must complete the following tasks:

1. [Describe your policy](#) in a YAML file.
2. [Implement your policy](#), by using DataPower processing rules and actions.

## Procedure

To package and import your user-defined policy, complete the following steps:

1. Create a .zip file that contains the following folder structure:

```
<policy-name>.yaml
implementation/
  policy-name.zip
```

where

- `<policy-name>.yaml` is your policy definition file. The YAML file must use the name that is specified in its `name` property.
- `implementation/policy-name.zip` is your policy implementation for a policy that is deployed to the DataPower Gateway. The policy implementation file contains the DataPower processing rules and actions that were exported from DataPower in step 2.

The name of the .zip file must start with the name of the user-defined policy (as defined in the policy YAML file). If the implementation requires certificate and key files, these files must be added to the implementation directory.

Note: Your package .zip file must contain a .zip policy implementation file.

2. Use the API Manager user interface to import your policy into a Catalog. For more information, see [Importing a user-defined policy into a Catalog](#).

Note:

- You must import your user-defined policy into every Catalog in API Manager that you require your policy to run in.
- For the policy to be displayed on the palette in the [API assembly editor](#), you must import the user-defined policy into the Sandbox Catalog.

## What to do next

Make your user-defined policy package accessible to the API Designer UI. To display user-defined policies in the API Designer UI, edit the .apiconnect/config file to point to the directory containing the policy.yaml file. You can edit the global config file (~/.apiconnect/config) or a project-specific config file (~/ProjectA/.apiconnect/config). Follow these steps:

1. Create one or more directories to hold your policy.yaml files that are accessible to Node.js, and copy the user-defined policy package into this directory. For example, create directories named /ProjectA/Policies and /ProjectB/Policies.
2. Extract the policy package so that the folder structure is visible, for example `policy.yaml` and `implementation/policy-name.zip`. The file containing the custom policies must be named `policy.yaml`.
3. Add the `userPolicies`: [ ] array object to the config file in `~/ProjectA/.apiconnect/` or `~/.apiconnect/`, and edit the array object so it contains the absolute path to the director(ies) containing the policy.yaml file.

Following is an example of an `~/.apiconnect/config` file showing the `userPolicies` entry pointing to the directory containing the policy.yaml file:

```
apim_server: us.apiconnect.ibmcloud.com
us.apiconnect.ibmcloud.com.meta:
  formFactor: BLUEMIX_PUBLIC
  serverCapabilities:
    authTypes:
      - basic
      - token
  toolkit:
    version_recommended: 2.1.30
    version_minimum: 2.1.30
catalog: >-
  apic-catalog://us.apiconnect.ibmcloud.com/orgs/sampleorg-myspace2/catalogs/sb
app: >-
  apic-app://us.apiconnect.ibmcloud.com/orgs/sampleorg-myspace2/apps/acme-bank
userPolicies:
  - /ProjectA/Policies
```

Note:

- The `userPolicies`: [ ] array object contains a list of absolute paths to the policy director(ies). The values can point to a parent location, for example `userPolicies`: ["/~/mypolicies"]. Alternatively, each policy location can be specified in the array, for example `userPolicies`: ["/~/mypolicies/policya", "/~/mypolicies/policyb"]. However, do not use both of these approaches in the same directory. For example, do not create policies in a directory structure like this `~/mypolicies`, `~/mypolicies/policya`, and `~/mypolicies/policyb`.
4. Open the API Designer UI. The user-defined policy is available on the policy assembly palette, and you can add the policy to your API definition.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

DataPower Gateway (v5 compatible) only

## Reference

Reference information for authoring policies in IBM® API Connect.

Example code snippets to help the creation of a user-defined policy implementation.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

DataPower Gateway (v5 compatible) only

## Implementation code examples

Example code snippets to help the creation of a user-defined policy implementation.

Note: If you are using GatewayScript, you must include the following command:

```
var apic = require(./apim.custom.js);
```

where *apic* is the common name used for the GatewayScript examples in this topic. However, *apic* could be any given name of your choice, for example you could use:

```
var apim = require(./apim.custom.js);
```

and then you would start your calls with *apim*.

- [Access to input properties code snippet](#)
- [Access to runtime context code snippet](#)
- [Access to input payload code snippet](#)
- [Access to HTTP headers code snippet](#)
- [Modify the payload code snippet](#)
- [Configure error information code snippet](#)
- [Set variables code snippet](#)

## Access to input properties code snippet

The following code block shows an example of how to access the input properties by using the XSLT `policyProperties()` function. The example defines a property that is named `a_property`, which is declared as an integer value, but is retrieved in XSLT as text.

```
<?xml version="1.0" encoding="UTF-8"?>
<xsl:stylesheet version="1.0"
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
  xmlns:dp="http://www.datapower.com/extensions"
  xmlns:func="http://exslt.org/functions"
  xmlns:apim="http://www.ibm.com/apimanagement" extension-element-prefixes="dp func apim">

  <!-- Contains the APIM functions -->
  <xsl:import
href="#_home_markdown_jenkins_workspace_Transform_in_SSMNED_10.0.4_com.ibm.apic.policy.doc_local:_isp_policy_apim.custom.xsl"
/>

  <xsl:template match="/">
    <xsl:variable name="p" select="apim:policyProperties()" />
    <xsl:message>
      The value of my input property is
      <xsl:value-of select="$p/a_property" />
    </xsl:message>
  </xsl:template>
</xsl:stylesheet>
```

If you are using GatewayScript, you must call the function:

```
apic.getPolicyProperty(propertyName)
```

where *propertyName* is the name of the input property that you want to access. If the input property name is blank, the action will return all input properties.

## Access to runtime context code snippet

The following code block shows an example of how to access the runtime context by using the XSLT `getContext()` function.

```
<?xml version="1.0" encoding="UTF-8"?>
<xsl:stylesheet version="1.0"
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
  xmlns:dp="http://www.datapower.com/extensions"
  xmlns:func="http://exslt.org/functions"
  xmlns:apim="http://www.ibm.com/apimanagement" extension-element-prefixes="dp func apim">

  <!-- Contains the APIM functions -->
  <xsl:import
href="#_home_markdown_jenkins_workspace_Transform_in_SSMNED_10.0.4_com.ibm.apic.policy.doc_local:_isp_policy_apim.custom.xsl"
/>

  <xsl:template match="/">
    <xsl:variable name="client-id" select="apim:getContext('client.app.id')"/>
    <xsl:message>
      The calling application is
    </xsl:message>
  </xsl:template>
</xsl:stylesheet>
```

```

    <xsl:value-of select="$client-id" />
  </xsl:message>
</xsl:template>

```

```
</xsl:stylesheet>
```

If you are using GatewayScript, you must call the function:

```
apic.getContext(varName)
```

where *varName* is the name of the context variable that you want to access.

For a complete list of context variables, see [API Gateway context variables](#).

## Access to input payload code snippet

The following code block shows an example of how to access the input payload by using the XSLT `payloadRead()` function.

```

<?xml version="1.0" encoding="UTF-8"?>
<xsl:stylesheet version="1.0"
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
  xmlns:dp="http://www.datapower.com/extensions"
  xmlns:func="http://exslt.org/functions"
  xmlns:apim="http://www.ibm.com/apimanagement" extension-element-prefixes="dp func apim">

  <!-- Contains the APIM functions -->
  <xsl:import
href="#_home_markdown_jenkins_workspace_Transform_in_SSMNED_10.0.4_com.ibm.apic.policy.doc_local:_isp_policy_apim.custom.xsl"
/>

  <xsl:template match="/">
    <xsl:variable name="input" select="apim:payloadRead()" />
    <xsl:message>
      The input payload is
      <xsl:copy-of select="$input" />
    </xsl:message>
  </xsl:template>

</xsl:stylesheet>

```

If you are using GatewayScript, you must call the function:

```
apic.readInput(callback)
```

A callback is required because the actual payload read is asynchronous. The callback method is called when the payload is ready.

This function returns an XML node-set that contains the payload of the request. If the payload is in JSON format, a JSONx node-set is returned that can then be manipulated within an XSLT or GatewayScript stylesheet. If the payload is not in JSON or XML format, the node-set that is returned is empty.

The following example shows how to use the `payloadType()` function to determine what type of payload (XML or JSONx) will be returned by the XSLT `payloadRead()` function.

```

<?xml version="1.0" encoding="UTF-8"?>
<xsl:stylesheet version="1.0"
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
  xmlns:dp="http://www.datapower.com/extensions"
  xmlns:func="http://exslt.org/functions"
  xmlns:apim="http://www.ibm.com/apimanagement" extension-element-prefixes="dp func apim">

  <!-- Contains the APIM functions -->
  <xsl:import
href="#_home_markdown_jenkins_workspace_Transform_in_SSMNED_10.0.4_com.ibm.apic.policy.doc_local:_isp_policy_apim.custom.xsl"
/>

  <xsl:template match="/">
    <xsl:variable name="payloadType" select="apim:payloadType()" />
    <xsl:message>
      <xsl:text>Payload type is [</xsl:text>
      <xsl:value-of select="$payloadType" />
      <xsl:text>]</xsl:text>
    </xsl:message>
  </xsl:template>

</xsl:stylesheet>

```

## Access to HTTP headers code snippet

The following code block shows an example of how to access the HTTP headers in XSLT by using the `getContext()` function.

```

<?xml version="1.0" encoding="UTF-8"?>
<xsl:stylesheet version="1.0"
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
  xmlns:dp="http://www.datapower.com/extensions"
  xmlns:func="http://exslt.org/functions"
  xmlns:apim="http://www.ibm.com/apimanagement" extension-element-prefixes="dp func apim">

  <!-- Contains the APIM functions -->
  <xsl:import
href="#_home_markdown_jenkins_workspace_Transform_in_SSMNED_10.0.4_com.ibm.apic.policy.doc_local:_isp_policy_apim.custom.xsl"
/>

  <xsl:template match="/">
    <xsl:variable name="content-type" select="apim:getContext('request.headers.content-type')" />
    <xsl:message>
      The request content type is

```

```

    <xsl:value-of select="$content-type" />
  </xsl:message>
</xsl:template>

```

```
</xsl:stylesheet>
```

If you are using GatewayScript, you must call the function:

```
apic.getContext(request.headers.headerName)
```

where `headerName` maps to the name of the header you want to access.

Note: Access or modification of HTTP headers by using DataPower® extensions, such as `dp:set-request-header`, is not advisable, as such actions might yield unexpected results when the policy is combined with other policies and assembly steps.

## Modify the payload code snippet

The output from a user-defined policy must be an XML node-set, which represents an XML or SOAP message, or a JSON message by using JSONx. The following code block shows an example of how to modify the payload in XSLT. To assist the API Gateway policy framework to accept the new or transformed message, call the `apim-output` template, as shown in the following example.

```

<?xml version="1.0" encoding="UTF-8"?>
<xsl:stylesheet version="1.0"
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
  xmlns:apim="http://www.ibm.com/apimanagement"
  xmlns:jsonx="http://www.ibm.com/xmlns/prod/2009/jsonx">

  <!-- Contains the APIM functions -->
  <xsl:include
href="#_home_markdown_jenkins_workspace_Transform_in_SSMNED_10.0.4_com.ibm.apic.policy.doc_local_isp_policy_apim.custom.xsl"
  />

  <xsl:template match="/">
    <!-- Creates a JSON document (empty object is for simplicity) -->
    <jsonx:object>
    </jsonx:object>

    <!-- Indicates the media type of the output being produced -->

    <xsl:call-template name="apim:output">
      <xsl:with-param name="mediaType" select="'application/json'" />
    </xsl:call-template>
  </xsl:template>
</xsl:stylesheet>

```

where `mediaType`:

- `'application/json'` is when the output is written in JSONx format.
- `'application/xml'` is when the output is written in XML format.

If you are using GatewayScript, you must call the function:

```
apic.output(mediaType)
```

where `mediaType` is:

- `application/json` is when the output is written in JSONx format.
- `application/xml` is when the output is written in XML format.

Specifying the media type allows the next steps in the assembly flow to understand how to process the new payload.

Tip: The output from a user-defined policy must be XML or JSONx. JSONx is an IBM standard format to represent JSON as XML. One way to convert output GatewayScript JSON data into JSONx, is to add a `Convert Query Params to XML` action to follow the GatewayScript action within the same policy rule. The `Convert Query Params to`

`XML` action must have an `Input Conversion` with the `Default`

`Encoding` set to `JSON`. The output from the GatewayScript action must be the input for the `Convert Query Params to XML` action for JSONx to be produced.

## Configure error information code snippet

The following XSLT code block shows an example of how to configure the policy implementation to produce error information by calling the `apim-error` template.

```

<?xml version="1.0" encoding="UTF-8"?>
<xsl:stylesheet version="1.0"
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
  xmlns:apim="http://www.ibm.com/apimanagement">

  <!-- Contains the APIM functions -->
  <xsl:include
href="#_home_markdown_jenkins_workspace_Transform_in_SSMNED_10.0.4_com.ibm.apic.policy.doc_local_isp_policy_apim.custom.xsl"
  />

  <!-- Indicates this policy has a failure and provides
additional information for the client application -->
  <xsl:template match="/">
    <xsl:call-template name="apim:error">
      <xsl:with-param name="httpCode" select="'401'" />
      <xsl:with-param name="httpReasonPhrase" select="'Unauthorized'" />
      <xsl:with-param name="errorMessage" select="'Please select a Plan'" />
    </xsl:call-template>
  </xsl:template>
</xsl:stylesheet>

```

```
</xsl:stylesheet>
```

where:

- **httpCode** is the code of the required error message.
- **httpReasonPhrase** is the reason for the error.
- **errorMessage** is the suggested action for the user.

If you are using GatewayScript, you must call the template:

```
apic.error(name, httpCode, httpReasonPhrase, message)
```

where:

- **name** is the name of the error.
- **httpCode** is the code of the required error message.
- **httpReasonPhrase** is the reason for the error.
- **message** is the suggested action for the user.

## Set variables code snippet

The following XSLT code block shows an example of how to set a runtime variable to a specified string value by calling the **setVariable** template.

```
<?xml version="1.0" encoding="UTF-8"?>
<xsl:stylesheet version="1.0"
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
  xmlns:dp="http://www.datapower.com/extensions"
  xmlns:func="http://exslt.org/functions"
  xmlns:apim="http://www.ibm.com/apimanagement" extension-element-prefixes="dp func apim">

  <!-- Contains the APIM functions -->
  <xsl:import
href="#_home_markdown_jenkins_workspace_Transform_in_SSMNED_10.0.4_com.ibm.apic.policy.doc_local:_isp_policy_apim.custom.xsl"
/>

  <xsl:template match="/">
    <xsl:call-template name="apim:setVariable">
      <xsl:with-param name="varName" select="'serviceEndpoint'" />
      <xsl:with-param name="value" select="'https://endpoint.host.com/data'" />
    </xsl:call-template>
    <xsl:message>
      <xsl:text>Variable [ </xsl:text>
      <xsl:value-of select="'serviceEndpoint'" />
      <xsl:text>] set to [ </xsl:text>
      <xsl:value-of select="'https://endpoint.host.com/data'" />
      <xsl:text>]</xsl:text>
    </xsl:message>
  </xsl:template>
</xsl:stylesheet>
```

where:

- **varName** is the name of the runtime variable that you want to set a value to.
- **value** is the string value that you want to set the variable to. This can be a literal value, or another variable. For example, to set your named variable to the value of the Content-Type header in a request, you would specify the **value** as `$(request.headers.content-type)`.

If you are using GatewayScript, you must call the template:

```
apic.setvariable(varName, varValue, action)
```

where:

- **varName** is the name of the runtime variable that you want to set a value to, or that you want to add or clear.
- **varValue** is the string value that you want to set the variable to. This can be a literal value, or another variable. For example, to set your named variable to the value of the Content-Type header in a request, you would specify the **varValue** as `request.headers.content-type`. This property is only required when **set** or **add** is specified as the action.
- **action** is the action that you want to apply to the variable. Valid options are:
  - **set**
  - **add**
  - **clear**

If no option is set, the default option of **set** is applied.

The following XSLT example shows how to retrieve the value of a runtime variable by using the **getVariable()** function.

```
<?xml version="1.0" encoding="UTF-8"?>
<xsl:stylesheet version="1.0"
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform"
  xmlns:dp="http://www.datapower.com/extensions"
  xmlns:func="http://exslt.org/functions"
  xmlns:apim="http://www.ibm.com/apimanagement" extension-element-prefixes="dp func apim">

  <!-- Contains the APIM functions -->
  <xsl:import
href="#_home_markdown_jenkins_workspace_Transform_in_SSMNED_10.0.4_com.ibm.apic.policy.doc_local:_isp_policy_apim.custom.xsl"
/>

  <xsl:template match="/">
    <xsl:variable name="varValue" select="apim:getVariable('serviceEndpoint')" />
  </xsl:template>
</xsl:stylesheet>
```

```
<xsl:message>
  <xsl:text>Variable [</xsl:text>
  <xsl:value-of select="'serviceEndpoint'" />
  <xsl:text>] = [</xsl:text>
  <xsl:value-of select="$varValue" />
  <xsl:text>]</xsl:text>
</xsl:message>
</xsl:template>

</xsl:stylesheet>
```

where

- `varValue` is the name of the runtime variable that you want to retrieve a value for.

If you are using GatewayScript, you must call the function:

```
apic.getvariable(varName)
```

where `varName` is the name of the runtime variable that you want to retrieve a value for.

API Gateway only

## Authoring policies for the DataPower API Gateway

A user-defined policy for the DataPower® API Gateway consists of a package containing configuration details that define the actions of the policy. You publish the package to the DataPower API Gateway to make it available to APIs that are deployed there.

There are two types of user-defined policies, *Catalog scoped* user-defined policies and *global scoped* user-defined policies:

Catalog-scoped user-defined policies

Catalog-scoped user-defined policies are available to APIs only in the Catalogs that you specify. Use a Catalog scoped user-defined policy if you want to limit the availability of your policy on a Catalog specific basis. The possible actions of a Catalog scoped user-defined policy are limited to the API Connect built-in assembly policies. For more information, see [Defining, packaging, and publishing a catalog-scoped policy for the API Gateway](#).

Global-scoped user-defined policies

Global-scoped user-defined policies are available to APIs in every Catalog in every provider organization. Use a global scoped user-defined policy in the following situations:

- You want to make your policy available everywhere rather than limiting its availability to specific Catalogs.
- Your policy uses a DataPower implementation, where configuration changes are made directly on the DataPower API Gateway.

For more information, see [Defining, packaging, and publishing a global-scoped policy for the API Gateway](#).

- [Defining, packaging, and publishing a catalog-scoped policy for the API Gateway](#)  
Create a catalog-scoped, user-defined policy that can be used in API assemblies within the catalog where the policy is published.
- [Defining, packaging, and publishing a global-scoped policy for the API Gateway](#)  
Create a global-scoped, user-defined policy that is available to APIs in any of the catalogs in any provider organization.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Defining, packaging, and publishing a catalog-scoped policy for the API Gateway

Create a catalog-scoped, user-defined policy that can be used in API assemblies within the catalog where the policy is published.

### About this task

---

When a catalog-scoped policy is published, you can only use it in the API Assembler's Policy palette for APIs contained within the same catalog where the policy was published. Complete the following tasks to define, package, and publish the catalog-scoped policy.

Tip: During this task, you will create several zip files. On Mac OS X, run the `zip` command on the command line with the following flags:

```
-x ".DS_Store" -x "__MACOSX"
```

Including the flags prevents the auto-generated .DS\_Store and \_\_MACOSX files from being added to the zip.

- [Structure of the catalog-scoped user-defined policy YAML file](#)  
Review the required structure of the YAML file that contains your catalog-scoped user-defined policy.

## Step 1: Define a catalog-scoped policy for API Gateway

---

Use the DataPower Web GUI to define a new policy that can be used in API assemblies within the catalog where the policy is published.

### Procedure

1. Log in to the DataPower Web GUI.
2. Create a new "test" domain and then switch to it.  
This test domain will be used as a "sandbox" to build and export the custom policies.
3. Navigate to Assembly Function and create a new object:
  - a. Name the object `<org-name>_<catalogname>_udp-<policyname>_<version>`.  
Example: "testorg\_stagecatalog\_udp-testpolicy\_1.0.0". Use the same name for all of the objects that you create in this task.  
Note: This naming convention specifies the provider organization and catalog where the policy will be available, as well as the policy's name and version.
  - b. Under the "Assembly" property, create a new Assembly.
  - c. Under the new Assembly, create a new Rule.
  - d. Under the new Rule, create a new API Action.
  - e. Optionally add an implementation file for the new Action.  
For example, an XSLT Action requires an XSL file. Create the file in the using the following path and name (where "udp" refers to user-defined policy):  
  
`local:///<udp-name>/<udp-name>.<file-extension>`
  - f. Click Apply and then save all of the new objects.
4. Export the new user-defined policy.
  - a. Navigate to the newly created Assembly Function.
  - b. Click Export to export the new user-defined policy to a file named `<policyname>_<version>.zip`.
  - c. Open the exported `<policyname>_<version>.zip` file and confirm that all referenced files are included.
  - d. Delete the dp-aux folder from the zip.  
This optional folder requires a lot of storage space and might cause a problem when you package and publish the new policy in the next task.

## Step 2: Package and publish a catalog-scoped policy for API Gateway

---

Decide how you want the new catalog-scoped policy to be managed, and then publish it to make it available to API assemblies within a particular catalog.

### About this task

Be sure to complete [Step 1: Define a catalog-scoped policy for API Gateway](#), before attempting to package and publish the new policy.

There are two methods for packaging and publishing a user-defined policy, based on how you want the policy to be managed:

- [Step 2, Option A: Package and publish a catalog-scoped policy directly in the DataPower configuration](#)
- [Step 2, Option B: Package and publish a catalog-scoped policy as a gateway extension that API Connect manages](#)

## Step 2, Option A: Package and publish a catalog-scoped policy directly in the DataPower configuration

---

Package and publish a catalog-scoped policy so it can be stored directly on the DataPower API Gateway.

### About this task

When you store a catalog-scoped policy on the DataPower API Gateway, the policy exists in the gateway's startup domain configuration and will be unaffected by the API Manager lifecycle. If you want to store the catalog-scoped policy directly on DataPower, you do not need to package it for API Manager. Instead, complete the following steps.

### Procedure

1. Import the custom policy created in [Step 1: Define a catalog-scoped policy for API Gateway](#) to the application domain for every DataPower node in the cluster.
2. Proceed to [Step 3: Create and publish a policy.yaml file](#), where you will create a file that describes the new policy so that API Manager can support it.

## Step 2, Option B: Package and publish a catalog-scoped policy as a gateway extension that API Connect manages

---

Package and publish a catalog-scoped policy as a gateway extension in API Connect.

### Before you begin

The xml-manager must be enabled on the default domain of every gateway that will have a gateway-extension published to it.

### About this task

When you publish a catalog-scoped policy as a gateway extension in API Connect, it is subject to the API Manager lifecycle. The individual assembly functions will not be added to the API Connect Gateway Service (only global-scoped policies are added to the service).

## Procedure

1. Rename the `<policyname>_<version>.zip` file (that you created in [Step 1: Define a catalog-scoped policy for API Gateway](#)) to `<org-name>_<cat-name>_<policyname>_<version>.zip`.  
The new file name indicates the provider organization and the catalog where the policy will be used.
2. Create a gateway-extension manifest.json file as explained in [Gateway extensions manifest](#).  
The manifest contains one or more entries. The following example contains a sample entry for the new catalog-scoped policy and references the new policy filename.

```
{
  "filename": "<org-name>_<cat-name>_<policyname>_<version>.zip",
  "deploy": "immediate",
  "type": "dp-import",
},
```

3. Create a new zip file called `gateway-extension.zip` that contains the following files:
  - manifest.json
  - `<org-name>_<cat-name>_<policyname>_<version>.zip`
4. Publish the new gateway extension using the API Conref Toolkit or the Cloud Manager UI:
  - API Connect Toolkit:  
Use the `apic gateway-extensions: create` command to publish the gateway extension as explained in the [apic gateway-extensions](#) topic.
  - Cloud Manager UI:  
Complete the following steps to publish the gateway extension from Cloud Manager:
    - Log in to Cloud Manager.
    - Click Topology  > Configure gateway extensions > Upload gateway-extension.zip file and upload your new gateway-extension.zip file.
5. Verify that the new catalog-scoped policy is available in the API Assembler's Policy palette.
  - a. Log in to API Manager and open the Catalog where you published the new catalog-scoped policy.
  - b. Create an API.
  - c. Open the API Assembler page and view the Policy palette; verify that your new catalog-scoped policy displays and can be added to the API.

## Step 3: Create and publish a policy.yaml file

---

Create a file that describes the properties of the catalog-scoped policy, and then publish it to make it accessible to API Manager.

### Procedure

1. Create a YAML file that describes the new catalog-scoped policy.
  - a. Create a file named `<policyname>.yaml`.
  - b. Paste the following content into the new file:

```
attach:
- rest
- soap
policy: 1.0.0
info:
  title: <policyname>
  name: <policyname>
  version: 1.0.0
  description: <description-here>
properties:
  $schema: 'http://json-schema.org/draft-04/schema#'
  type: object
  properties:
    exampleProperty:
      label: Test Property
      description: Enter any value
      type: string
    exampleProperty2:
      label: Another Test Property
      description: Enter any value
      type: string
  required:
  - exampleProperty2
gateways:
- datapower-api-gateway
```

- c. Modify the content as needed to correctly describe your new catalog-scoped policy.  
For more information, see [Structure of the catalog-scoped user-defined policy YAML file](#).
  - d. Save and close the file.
2. Create a new zip file called `<policyname>.zip` that contains the new YAML file.
  3. Publish the new policy using either the API Connect Toolkit or the API Manager:
    - API Connect Toolkit:  
Use the `apic policies: create` command to publish the gateway extension as explained in the [apic policies:create](#) topic.
    - API Manager:  
Complete the following steps to publish the new policy:
      - Log in to API Manager.
      - Click Manage Catalogs  > Select Catalog  > Gateways  > selected\_gateway  > View policies and upload your new policy.zip file.
  4. Verify that the new catalog-scoped policy is available in the API Assembler's Policy palette.

- a. In API Manager, select the Catalog where you published the new catalog-scoped policy.
- b. Create an API.
- c. Click  (next to Save) and for the Target Catalog, select the catalog where you published the new policy.
- d. Save the API.
- e. Open the API Assembler page and view the Policy palette; verify that your new catalog-scoped policy displays and can be added to the API.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Structure of the catalog-scoped user-defined policy YAML file

Review the required structure of the YAML file that contains your catalog-scoped user-defined policy.

The .yaml file for a catalog-scoped user-defined policy contains the following sections:

- [Specification version](#)
- [Information](#)
- [Attach](#)
- [Gateways](#)
- [Properties](#)
- [Assembly section](#)

---

### Specification version

Set the specification version by adding the following line to the beginning of the file:

```
policy: 1.0.0
```

---

### Information

Complete the information section with details about the policy by using the following syntax:

```
info:
  title: Title of policy
  name: shortnameofpolicy
  version: 1.0.0
  description: An example policy
  contact:
    name: name1
    url: url1
    email: email1
```

where:

- **title** is the title of the policy. Any string can be used, but the title should be kept short so that it can be displayed in the API Manager user interface.
- **name** is the short name for the policy. Must be a single word, and contain only alphanumeric characters, and the - (dash) and \_ (underscore) characters. The name is case-sensitive, and should be 20 characters or less so that it can be displayed in the API Manager user interface.  
Important: The policy short name must be different from the OpenAPI names of the built-in policies, otherwise it will cause a policy conflict in the API assembly definition. For a list of the OpenAPI built-in policy names, see [execute](#). Also, consider including an appropriate unique prefix or suffix string in the short names of your user-defined policy to prevent possible name conflicts with future built-in policies.  
Note: The **name** property must be identical to the Node.js module name.
- **version** is the version number of the policy. This is a reserved property.  
Tip: The *version.release.modification* version numbering scheme is recommended, for example *1.0.0*.  
Note: The **info.version** in policy.yaml must match the **version** indicated in package.json.
- **description** (optional) is a short description of the policy.
- **contact** (optional) is the contact information for the policy, where:
  - **name** (string) is the identifying name of the contact person or organization.
  - **url** (string) is the URL that points to the contact information.
  - **email** (string) is the email address of the contact person or organization.

For example:

```
info:
  title: Custom Invoke Policy
  name: custom-invoke
  version: 1.0.0
  description: Invokes httpbin
  contact:
    name: IBM DataPower Samples
    url: 'https://github.com/ibm-datapower/'
    email: steve-product-manager@ibm.com
```

---

### Attach

Complete the attach section by specifying which types of API flow the policy can be attached to.

- **rest** indicates that this policy can be attached to a REST API flow.
- **soap** indicates that this policy can be attached to a SOAP API flow.

The attach section must contain at least one API flow type. If a policy can be attached to both API flow types, they must both be indicated in the attach section.

For example:

```
attach:
- rest
- soap
```

## Gateways

---

Specify the DataPower® API Gateway, as follows:

```
gateways:
- datapower-api-gateway
```

## Properties

---

Complete the properties section by defining a JSON schema (based on JSON Schema Specification Draft 4, but rendered in YAML format) that contains the list of properties the policy will declare as required input. These properties are presented to the API author at development time, when the properties can be configured or mapped to values as required. The JSON schema defines a root object that contains the following JSON properties:

- **type**
- **properties**
- **required**

The syntax and definition of these properties matches the JSON schema definition. The following code block shows an example of a simple schema that defines one required property (*a\_property*):

```
properties:
  $schema: "http://json-schema.org/draft-04/schema#"
  type: object
  properties:
    a_property:
      label: a label
      description: a description
      type: a type
  required:
    - a_property
```

The root *type* of the schema must be an **object**, as shown in the example schema. You can define zero or more properties in the schema. Required properties are declared by using the **required** parameter, as shown in the example schema. The policy will not be accessible in the API Manager assembly editor, unless all the required properties have values. Each property is an object with the following items:

- **label** is a short name for the property and is displayed in the Name column of the API Manager assembly editor.
- **description** is a short description for the property and is displayed in the Description column of the API Manager assembly editor.
- **type** must be one of the following primitives that are supported:
  - *integer*
  - *number*
  - *string*
  - *boolean* (this primitive is shown as a check box in the assembly editor)
  - *array*
- **default** (optional) specifies a default value for the property.
- **enum** (for properties with a **type** of *string*) is an array of valid values.

For example:

```
properties:
  $schema: 'http://json-schema.org/draft-04/schema#'
  type: object
  properties:
    test:
      label: Test Property
      description: Enter any value
      type: string
  required:
    - test
```

## Assembly section

---

The assembly section defines the assembly policy flow that will be activated when the user-defined policy is invoked. For example:

```
assembly:
  execute:
    - invoke:
        version: 2.0.0
        title: custom-invoke
        header-control:
          type: blacklist
          values: []
        parameter-control:
          type: whitelist
          values: []
        timeout: 60
        verb: keep
        cache-response: protocol
        cache-ttl: 900
        stop-on-error: []
        target-url: 'http://httpbin.org/headers'
```

You can determine the correct content of this section in either of the following ways:

- Define the assembly flow by using the graphical assembly editor in either the API Designer or API Manager user interface, then copy the `assembly`: section from the Source tab. For more information on defining an assembly flow in the user interface, see [The Assemble view](#) and [API policies and logic constructs](#).
- Code the policies in the `execute`: subsection of the `assembly`: section by hand; for details, see [execute](#).

The assembly section can contain only the API Connect [built-in policies](#). However, you can include a [gatewayscript](#) policy that references native DataPower configuration.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Defining, packaging, and publishing a global-scoped policy for the API Gateway

Create a global-scoped, user-defined policy that is available to APIs in any of the catalogs in any provider organization.

### About this task

When a global-scoped policy is published, you can use it in the API Assembler's Policy palette for APIs in any catalog belonging to any provider organization. Complete the following tasks to define, package, and publish the global-scoped policy.

Tip: During this task, you will create several zip files. On Mac OS X, run the `zip` command on the command line with the following flags:

```
-x ".DS_Store" -x "__MACOSX"
```

Including the flags prevents the auto-generated `.DS_Store` and `__MACOSX` files from being added to the zip.

### Step 1: Define a global-scoped policy for API Gateway

Use the DataPower Web GUI to define a new policy that can be used in API assemblies in all catalogs belonging to all provider organizations.

#### Procedure

1. Log in to the DataPower Web GUI.
2. Create a new "test" domain and then switch to it.  
This test domain will be used as a "sandbox" to build and export the custom policies.
3. Navigate to Assembly Function and create a new object:
  - a. Name the object `<policyname>_<version>`.  
Example: "testpolicy\_1.0.0". Use the same name for all of the objects that you create in this task. Because the policy will be available in all provider organizations and catalogs, there is no need to specify that information in the object name.
  - b. Under the "Assembly" property, create a new Assembly.
  - c. Under the new Assembly, create a new Rule.
  - d. Under the new Rule, create a new API Action.
  - e. Optionally add an implementation file for the new Action.  
For example, an XSLT Action requires an XSL file. Create the file in the using the following path and name (where "udp" refers to user-defined policy):  
  
`local:///<udp-name>/<udp-name>.<file-extension>`
  - f. Click Apply and then save all of the new objects.
4. Export the new user-defined policy.
  - a. Navigate to the newly created Assembly Function.
  - b. Click Export to export the new user-defined policy to a file named `<policyname>_<version>.zip`.
  - c. Open the exported `<policyname>_<version>.zip` file and confirm that all referenced files are included.
  - d. Delete the `dp-aux` folder from the zip.  
This optional folder requires a lot of storage space and might cause a problem when you package and publish the new policy in the next task.

---

### Step 2: Package and publish a global-scoped policy for API Gateway

Decide how you want the new global-scoped policy to be managed, and then publish it to make it available to API assemblies.

#### About this task

Be sure to complete the steps in [Step 1: Define a global-scoped policy for API Gateway](#) before attempting to package and publish the new global-scoped policy. There are two methods for packaging and publishing a user-defined policy, based on how you want the policy to be managed:

- [Step 2, Option A: Package and publish a global-scoped policy directly in the DataPower configuration](#)
- [Step 2, Option B: Package and publish a global-scoped policy as a gateway extension that API Connect manages](#)

---

### Step 2, Option A: Package and publish a global-scoped policy directly in the DataPower configuration

Package and publish a global-scoped policy so it can be stored directly on the DataPower API Gateway.

#### About this task

When you store a global-scoped policy on the DataPower API Gateway, the policy exists in the gateway's startup domain configuration and will be unaffected by the API Manager lifecycle.

## Procedure

1. Import the `<policyname>_<version>.zip` file containing the new global-scoped policy to the application domain for every DataPower node in the cluster. Complete the following steps on every DataPower node in the cluster--if you omit a node, then the policy will not be available in the API Assembly's Policy palette.
  - a. On the DataPower node, navigate to the "API Connect Gateway Service" object.
  - b. Under the "User-defined policies" property, add a new Assembly Function by importing the `<policyname>_<version>.zip` file containing your new global-scoped policy.
  - c. Click Apply, and then Save.
2. Verify that the new global-scoped policy is available in the API Assembler's Policy palette.
  - a. Log in to API Manager.
  - b. Create an API.
  - c. Open the API Assembler page and view the Policy palette; verify that your new global-scoped policy displays and can be added to the API.

## Step 2, Option B: Package and publish a global-scoped policy as a gateway extension that API Connect manages

Package and publish a global-scoped policy as a gateway extension in API Connect.

### Before you begin

The xml-manager must be enabled on the default domain of every gateway that will have a gateway-extension published to it.

### About this task

When you publish a global-scoped policy as a gateway extension in API Connect, it is subject to the API Manager lifecycle.

## Procedure

1. Make a copy of the `<policyname>_<version>.zip` file containing your new global-scoped policy and remove the `<version>` number from the file name. This name change ensures that the relative path of the file meets the requirement to match the following regular expression: `implementation\[\/[\w_-]+\].zip`. You can retain the copy of the file with its original name for tracking purposes.

2. Create a local folder named `implementation` and store the renamed zip file in that folder.
3. Create a YAML file that describes the new global-scoped policy.
  - a. Create a file named `<policyname>.yaml`.
  - b. Paste the following content into the new file:

```
policy: 1.0.0
info:
  title: <policyname>
  name: <policyname>
  version: 1.0.0
  description: <description-here>
```

Only the `policy` and `info` sections are needed in the `<policyname>.yaml` for this task.

- c. Save and close the file.
4. Create a new zip file called `<policyname>_<version>.zip` that contains the following files:
    - The `implementation` folder
    - `<policyname>.yaml`
  5. Create a gateway-extension manifest.json file as explained in [Gateway extensions manifest](#). The manifest contains one or more entries. The following example contains a sample entry for the new global-scoped policy and references the original policy `<policyname>_<version>.zip` file that you created in [Step 1: Define a global-scoped policy for API Gateway](#):

```
{
  "filename": "<policyname>_<version>.zip",
  "deploy": "immediate",
  "type": "user-defined-policy",
},
```

6. Create a new zip file called `gateway-extension.zip` that contains the following files:
  - `manifest.json`
  - `<policyname>_<version>.zip`  
This is the file that you created in [step 4](#) of this task (it contains the `implementation` folder and the `<policyname>.yaml` file).
7. Publish the new gateway extension using one of the following methods:
  - API Connect Toolkit:  
Use the `apic gateway-extensions:create` command to publish the gateway extension as explained in the [apic gateway-extensions](#) topic.
  - Cloud Manager UI:  
Complete the following steps to publish the gateway extension from Cloud Manager:
    - Log in to Cloud Manager.
    - Click [Topology](#). . Configure gateway extensions and upload your new `gateway-extension.zip` file.
8. Verify that the new global-scoped policy is available in the API Assembler's Policy palette.
  - a. Log in to API Manager.
  - b. Create an API.
  - c. Open the API Assembler page and view the Policy palette; verify that your new global-scoped policy displays and can be added to the API.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Developer Portal: socialize your APIs

The Developer Portal is your one-stop-shop for sharing your APIs with application developers.

In addition to allowing application developers to find and subscribe to APIs, the Developer Portal provides additional features including forums, blogs, comments, and ratings, together with an administrative interface for customizing the Developer Portal to your brand and theme. See the following topics for more information.

### [Using the Developer Portal](#)

As well as enabling application developers to find and use your APIs, the Developer Portal also provides features such as API analytics, forums, blogs, and rating facilities.

### [Configuring the Developer Portal site](#)

Customize the look and feel of the Developer Portal site, and brand it for your organization.

### [Concepts in the Developer Portal](#)

Understand the various concepts and terminology that are referenced throughout the Developer Portal.

### [Getting started configuring the Developer Portal site](#)

A quick start guide to configuring your Developer Portal site.

### [Developer Portal tutorials](#)

Guided examples that take you through some of the most common user scenarios, as well as some of the more complex areas.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Using the Developer Portal

As well as enabling application developers to find and use your APIs, the Developer Portal also provides features such as API analytics, forums, blogs, and rating facilities.

The Developer Portal is a convenient place to share APIs with application developers. After a Developer Portal has been enabled through the API Manager, and one or more API Products have been published, application developers can browse and use the APIs. Typically, a Developer Portal is customized to fit the corporate branding and design requirements of a particular organization. For more information about configuring a Developer Portal site, see [Configuring the Developer Portal site](#). However, when the Developer Portal is first enabled it can be used as is, for example for test and development purposes, or for internal use only.

The following topics provide information about the main API consumer concepts in the Developer Portal, and how an application developer can navigate the default site. However, bear in mind that the actual consumer experience might be very different depending on how the site is configured. For tutorials guiding you through enabling a Developer Portal site, and navigating and using APIs as an application developer, see [Tutorial: Creating the Developer Portal](#) and [Tutorial: Creating Accounts and Applications on the Developer Portal](#).

- [Exploring APIs and Products in the Developer Portal](#)  
As an application developer, you can browse, test, and subscribe to APIs in the Developer Portal by exploring the available API Products.
- [Applications in the Developer Portal](#)  
You can view, edit, configure, and create applications in the Developer Portal.
- [Analytics in the Developer Portal](#)  
You can view analytics for APIs in the Developer Portal at the application and organization levels. This information is displayed in dashboard views that show the analytics metrics in the form of *visualizations* (represented as charts).
- [Consumer organizations in the Developer Portal](#)  
Consumer organizations provide a way of grouping application developers together. You can add, remove, and configure Consumer organizations in the Developer Portal.
- [User accounts, passwords, and support in the Developer Portal](#)  
You can change general elements such as user accounts and passwords in the Developer Portal.

---

## Related information

- [IBM API Connect overview](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Exploring APIs and Products in the Developer Portal

As an application developer, you can browse, test, and subscribe to APIs in the Developer Portal by exploring the available API Products.

Browsing available APIs

In API Connect API providers package their APIs into Products to offer one or more APIs to application developers. The providers then use Plans to control access to APIs and to manage API usage. Products are packages that contain both the APIs and the accompanying Plans.

From the Developer Portal home screen, click API Products to browse the available products. You can then select a Product to explore the available Plans and APIs further, including viewing API code snippets, and request and response examples.

Note: If you have an account on the Developer Portal, you can specify a default programming language for the code snippets to display in by editing the Code Snippet Language in your account settings.

#### Subscribing to a Plan

A Plan is a collection of API operations or subsets of operations from one or more APIs. In order to subscribe to a Plan, you must have an account on the Developer Portal and have created an App. For more information, see [User accounts, passwords, and support in the Developer Portal](#) and [Applications in the Developer Portal](#). Rate limits specify how many requests an App is allowed to make during a specified time interval. A Plan can have a shared rate limit for all the operations, or each operation can have a different rate limit. In addition, Plans can have multiple rate limits set per Plan and per operation, at second, minute, hour, day, and week time intervals. Plans can also have burst limits to prevent usage spikes that might damage infrastructure. Multiple burst limits can be set per Plan, at second and minute time intervals.

After you have identified the Plan that you want to use, click Subscribe and then select the App that you want to use with this Plan. If the Plan is not restricted, you can use it immediately. If the Plan is restricted, the subscription is shown as Pending Approval, and you cannot use the requested Plan until the administrator approves your request.

You cannot subscribe to a monetized Plan without first adding your payment information to your Consumer organization. You can register your payment information by editing the Billing tab for your Consumer organization. Note: you must either be the Consumer organization owner, or have `Settings: Manage` permissions for your organization to be able to edit the billing information. Consumer organizations can have at most one payment method. You can delete your payment method and add a different method, for example if your credit card expires. If you change your subscription to a Plan that has a different pricing structure, the subscription billing system will add a prorated amount to the next invoice of your subscription billing cycle.

#### Testing an API

You can test an API in the Developer Portal by using the interactive API document test tool. If the API operation that you want to test doesn't require a client ID, then you can use the test tool without the need to log in. For more information, see [Testing an API by using the Developer Portal test tool](#).

#### Calling an API in your application

When you have subscribed to a Plan and you begin coding your application, you must retrieve the operation URL in order to call the API. You can retrieve the operation URL from the API overview page. For more information, see [Calling an API](#).

- [How to use a URL to navigate directly to a Product or API in the Developer Portal](#)

You can navigate to a specific Product or API in the Developer Portal by using `x-ibm-name:version` in the URL.

- [Testing an API by using the Developer Portal test tool](#)

You can test the behavior of an API without the need to write any code by using the Developer Portal test tool. You provide the necessary API parameters within the test tool and click Invoke to see the response.

- [Calling an API](#)

When you have selected a Plan and you begin coding your application, you must retrieve the operation URL to call the API.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## How to use a URL to navigate directly to a Product or API in the Developer Portal

You can navigate to a specific Product or API in the Developer Portal by using `x-ibm-name:version` in the URL.

To find a Product or API in the Developer Portal you typically navigate there by searching in the UI, clicking on the relevant Product, and then selecting the API. However, if you know the `x-ibm-name:version` of your Product or API, you can insert that information into the URL to go there directly.

To navigate directly to a specific API, use the following URL syntax:

```
portal.site.url/productsselect/api_x-ibm-name:version
```

For example:

```
https://my.portal.com/myorg/sandbox/productsselect/petstore-header-clientid:1.0.0
```

To navigate directly to a specific Product, use the following URL syntax:

```
portal.site.url/product/product_x-ibm-name:version
```

For example:

```
https://my.portal.com/myorg/sandbox/product/my-product:1.0.0
```

To navigate directly to a specific API within a specific Product, use the following URL syntax:

```
portal.site.url/product/product_x-ibm-name:version/api/api_x-ibm-name:version
```

For example:

```
https://my.portal.com/myorg/sandbox/product/my-product:1.0.0/api/petstore-header-clientid:1.0.0
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

# Testing an API by using the Developer Portal test tool

You can test the behavior of an API without the need to write any code by using the Developer Portal test tool. You provide the necessary API parameters within the test tool and click Invoke to see the response.

## Before you begin

---

To use the Developer Portal test tool with an API that requires an App client ID, you must first complete the following tasks:

- Create an App. For more information, see [Registering an application](#).
- Subscribe to a Plan that contains the API that you want to test. For more information, see [Exploring APIs and Products in the Developer Portal](#).

## About this task

---

The Developer Portal test tool is an interactive API document test tool. If the operation that you want to test does not require a client ID, then you can use Developer Portal test tool without the need to sign in. However, if the operation that you want to interact with requires a client ID, then you must sign in to the Developer Portal first.

Using the Developer Portal test tool is subject to the rate limit that is applied to an operation or Plan. For example, if an operation has a rate limit of 10 requests per minute and you invoke the operation, the number of requests that can be made is reduced to nine. The limitations are triggered every time that you click invoke within the minute interval. This caveat affects the quota of the App that is selected to use with the Developer Portal test tool, but it does not affect the quota of the other Apps that are using the same operation or Plan.

To test an API in the Developer Portal, the Allow this API to be tested check box must be selected in the API Manager. For more information, see [Creating API definitions](#).

Restriction:

- There are security mechanisms that prevent you using the Developer Portal test tool to test an Implicit or Authorization Code grant type in an OAuth provider API. Other grant types in the same OAuth provider API **can** be tested. If your OAuth provider allows those actions to function correctly from the test tool, you can disable this option. For more information, see [Disabling test tool restrictions](#).
- You cannot use the Developer Portal test tool with suspended applications.
- You can only test an unenforced API if `testable=true`, and if the existing API implements CORS and is using HTTPS.

Note: GraphQL APIs can be tested from the Developer Portal user interface. However, not all authentication methods are supported. You must use one of the following authentication methods:

- Unsecured
- Client ID, passed in the header
- Client ID and secret, passed in the header

Also, `cost` metrics are not supported, and rate limits specific to GraphQL are not listed in Product plans.

## Procedure

---

1. To use the Developer Portal test tool with an API that does not require the client ID of an App, complete the following steps:

- a. Click API Products.  
All of the APIs that can be used by application developers are displayed.
- b. Click the name of the API that you want to test.
- c. Select an operation and then select Try It.
- d. Click Try this operation.
- e. Supply the values for required headers or parameters.
- f. If the operation is secured with Basic Authentication, supply the credentials.
- g. Click Send Request.

The result is displayed in the Response Body field. You can continue to test different parameter values as necessary.

Note:

The first time that you click Try It, you might be presented with a security error. Copy the URL from the Request URL field, open it in a browser window, and accept the security certificate. You are not presented with the security error again.

Also, for performance reasons, if the payload is large, more than 1500 DOM highlighted elements, you get the response, but it is not pretty printed.

2. To use the Developer Portal test tool with an API that does require the client ID of an App, complete the following steps:

- a. Sign in to the Developer Portal.
- b. If you have not already done so, you must create an App so that you can test an API that requires a client ID. For more information, see [Registering an application](#).
- c. Ensure that your App is subscribed to the Plan that contains the API that you want to test. For more information, see [Exploring APIs and Products in the Developer Portal](#).
- d. Click API Products.  
All of the APIs that can be used by application developers are displayed.
- e. Click the API that you want to test.
- f. Select the **Provide credentials for Client ID (API Key)** operation and then select Try It.  
The API Key Identification window displays.
- g. Use the Register an application in order to select a client ID drop-down list to select an App to test the API with.
- h. Click Save credentials.
- i. If a client secret is required, enter the value in the Client Secret field.
- j. Find the operation that you want to test, then click Try It.
- k. Supply the required parameters and values.
- l. If the operation is secured with Basic Authentication, supply the credentials.
- m. Click Send.

The result is displayed in the Response section. You can continue to test different field values as necessary.

Note: The first time that you click Invoke, you might be presented with a security error. Click the link that is provided to accept the security certificate. You are not presented with the security error again.

## Related tasks

- [Calling an API by using CORS](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Calling an API

When you have a selected a Plan and you begin coding your application, you must retrieve the operation URL to call the API.

## About this task

Be aware of the following points when you call APIs in IBM® API Connect:

- In the HTTP response message for status code 200 the reason phrase is replaced with OK.
- API error messages are displayed in English only.

## Procedure

To retrieve the operation URL, complete the following steps:

1. Click API Products, then select a product.
2. Click the API that you want to work with.  
The API overview page opens.
3. Select the operation you need and then copy the endpoint.  
This is the URL that the application calls, and its structure is defined:

Type of API	URL
REST APIs	<code>https://host/org/catalog/api/operation</code>
SOAP APIs	<code>https://host/org/catalog/api</code> for all operations in the WSDL.

where:

- *host* is the fully qualified host name of your gateway cluster.
  - *org* is the URL path of your organization.
  - *catalog* is the name of your Catalog.
  - *api* is the name of your API.
  - *operation* is the URL path of your operation.
4. Take note of any parameters, the request body, and the response body. Code your application to create the expected requests and handle the expected responses.

Depending on the Identify your application using setting for the API, you might have to provide a client ID, or client ID and client secret. To do this, complete the following steps:

5. To find the client ID, complete the following steps:
  - a. Click Apps, then click the application name that you want to work with.
  - b. Select the Show check box for Client ID.  
The client ID is displayed.
  - c. Provide the client ID with the header parameter `&client_id=`  
For example, the URL used in the API might be:

```
https://host/org/catalog/api/quote?loanAmount=20000
```

but when you call it with a client ID of 1234, change the URL to:

```
https://host/org/catalog/api/quote?loanAmount=20000&client_id=1234
```

Note: API Gateway only A client ID is generated automatically by API Connect when you register an application. However, if you specify a customized client ID, by using the CLI or REST API, then the length must not exceed 512 bytes, otherwise the gateway will reject the API request and return a 401 error.

6. The client secret is produced when you register an application. Provide the client secret with the query parameter `&client_secret=`. If you did not note the client secret when you registered the application, you must reset it; for information, see [Managing applications](#).

The client ID, or client ID and secret can be logged along with the URL. Web servers usually log the URL in their access logs, which would give away the client secret. If you do not want to expose your client ID or secret in the URL, complete the following steps.

7. For the client ID, set the header, `X-IBM-Client-Id`, as part of the HTTP message that the application sends when it calls the API.  
An example URL statement might be:

```
curl --header "X-IBM-Client-Id: 1234" https://host/org/catalog/api/quote?loanAmount=20000
```

Note: API Gateway only A client ID is generated automatically by API Connect when you register an application. However, if you specify a customized client ID, by using the CLI or REST API, then the length must not exceed 512 bytes, otherwise the gateway will reject the API request and return a 401 error.

8. For the client secret, set the header, `X-IBM-Client-Secret`, as part of the HTTP message that the application sends when it calls the API.  
For example, the URL would be:

```
https://host/org/catalog/api/quote?loanAmount=20000
```

and set the following HTTP headers:

```
X-IBM-Client-Id=1234  
X-IBM-Client-Secret=ABCD
```

## What to do next

---

Monitor the API and application usage. For more information, see [Managing applications](#).

- [Calling an API by using CORS](#)

CORS (cross origin resource sharing) is a technique that allows calls to be made from code that is running in a browser to a third-party server (such as APIs running on an API Connect Gateway). These calls are, by default, not allowed as per the same origin security policy that is applied to the browser sandbox. Without CORS support, web developers are required to use more complex techniques such as server-side proxies.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Calling an API by using CORS

---

CORS (cross origin resource sharing) is a technique that allows calls to be made from code that is running in a browser to a third-party server (such as APIs running on an API Connect Gateway). These calls are, by default, not allowed as per the same origin security policy that is applied to the browser sandbox. Without CORS support, web developers are required to use more complex techniques such as server-side proxies.

## About this task

---

API Connect Gateway servers support CORS to make it as easy as possible for web developers to use APIs within their web applications.

CORS is supported in the following browsers:

- Chrome 3+
- Firefox 3.5+
- Internet Explorer V11, or later
- Opera 12+
- Safari 4+

A CORS enabled browser automatically sends either a simple CORS request, consisting of the original request with the addition of the **Origin** header, or a preflight request followed by a simple CORS request.

An example CORS preflight request is as follows:

```
OPTIONS /org/env/api/resourceHTTP/1.1  
User-Agent: useragent details  
Access-Control-Request-Method: GET  
Access-Control-Request-Headers: header names  
Host: x.xx.xxx.xx  
Origin: https://example.com  
Accept: */*
```

You do not need to create CORS requests yourself, other than for testing or troubleshooting purposes.

A CORS response is received from the gateway; for example:

```
HTTP/1.1 200 OK  
X-Backside-Transport: FAIL FAIL  
Connection: Keep-Alive  
Transfer-Encoding: chunked  
Access-Control-Allow-Origin: https://example.com  
Access-Control-Allow-Credentials: true  
Access-Control-Allow-Headers: accept, accept-language, content-type, x-ibm-client-id  
Access-Control-Allow-Methods: methods allowed on the resource  
Vary: Origin
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Applications in the Developer Portal

---

You can view, edit, configure, and create applications in the Developer Portal.

Before you can subscribe to a Plan that contains the API or APIs that you want to use, you must first register an application by creating an App. You can create more than one App, and these Apps can be edited and deleted as required.

To learn about applications in the Developer Portal, use the following topic links.

- [Registering an application](#)  
Before you can use an API, you must register your application to the Developer Portal.
- [Managing applications](#)  
You can show or reset a client ID for an application, verify or reset a client secret, and view the details of the APIs in the application. You can also unsubscribe from a Plan that the application is subscribed to.
- [Editing an application](#)  
You can edit applications in the Developer Portal. If a user has the correct permissions, they can edit the content of any application in their organization.
- [Deleting an application](#)  
You can delete applications in the Developer Portal.
- [Changing an application image](#)  
You can change the image for an application in the Developer Portal.
- [Verifying an application client secret](#)  
You can verify an application client secret in the Developer Portal

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Registering an application

Before you can use an API, you must register your application to the Developer Portal.

### About this task

When you register an application, you are provided with a client ID and client secret for the application. You must supply the client ID when you call an API that requires you to identify your application by using a client ID, or a client ID and client secret.

You can, optionally, add further client ID/client secret pairs to an application, any of which can be used to identify the application when calling an API.

### Procedure

To register an application, complete the following steps:

1. Click Apps.  
The Apps page opens.
2. Click Create new app.
3. Optional: Specify a URL in the Application OAuth Redirect URL(s) field.  
You can specify multiple OAuth redirect URLs by clicking Add another item. If only one redirect URL is specified, and the application does not provide the `redirect_uri` in the OAuth request, then API Connect automatically uses the one redirect URL specified. However, if more than one redirect URL is specified, then the application must provide the `redirect_uri` in the OAuth request, or the OAuth request is rejected.
4. Click Submit.  
Your application is displayed.
5. The client secret is hidden; click the Show check boxes, make a note of your client secret because it is displayed only once.  
You must supply the client secret when you call an API that requires you to identify your application by using a client ID and client secret.  
Note: The client secret cannot be retrieved. If you forget it, you must reset it.
6. Optional: In the Certificate field, paste the public X509 certificate for your application, in PEM format.  
The Certificate field is available only if the APIs that have been published to the Developer Portal include at least one API that has been secured with TLS mutual authentication. You must complete this field if you want to call an API that has been secured with TLS mutual authentication. For more information, see [Composing a REST API definition](#).  
  
These certificates are sent to the management server and to the gateway, and are used for certificate verification when the application calls an API that has been secured with TLS mutual authentication.  
  
Important: When you paste the certificate, ensure that it contains no line breaks, and that the (-----BEGIN CERTIFICATE-----) prefix and (-----END CERTIFICATE-----) suffix are removed.
7. Optional: The client ID is hidden, to display the client ID for your application, click Subscriptions, then select the Show check box for Client ID.  
The client ID is displayed and can be hidden again by clearing the check box.
8. Optional: To verify your client secret, click Subscriptions, then click Verify, enter your client secret in the Secret field, then click Submit.  
You have confirmed whether your client secret is correct or incorrect.
9. To add an additional client ID and client secret to the application, complete the following steps:
  - a. Click Subscriptions.
  - b. Click Add alongside Credentials.  
The "Add new application credentials" window opens.
  - c. Enter a name and an optional summary, and click Submit.
  - d. Select the Show Client ID or Show Client Secret check box to display the client ID or client secret for the new credentials.
  - e. To add a description to a set of client credentials, or to change the current description, click Update alongside the required credentials.
  - f. To remove a set of client credentials from the application, click Delete alongside the required credentials.

If you add additional credentials to an application, any of the associated client ID/client secret pairs can be used to identify the application when calling an API.  
Note: If you add two or more sets of client credentials to an application, OAuth tokens are not shared between them; each client credential set uses a different OAuth token.
10. To add an image, click Upload image from the application overflow menu.  
A new window opens; click Browse, select an image from your directory, and click Submit.
11. Optional: To change the URL that authenticated OAuth flows for this application should be redirected to, click Edit from the application overflow menu, then enter a URL in the Application OAuth Redirect URL(s) field.
12. Optional: To change the application name or description, click the Edit from the application overflow menu.

## Results

---

Your application is registered.

## What to do next

---

Select a Plan to use with your application, see [Exploring APIs and Products in the Developer Portal](#).

## Related information

---

- [IBM API Connect overview](#)
- [Creating an API key security definition](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Managing applications

You can show or reset a client ID for an application, verify or reset a client secret, and view the details of the APIs in the application. You can also unsubscribe from a Plan that the application is subscribed to.

## About this task

---

On the application details page, you can display and reset a client ID and client secret. You might want to reset a client secret if it is compromised or you forget it. A client secret is only displayed once, so after you reveal it for the first time at a time of your choosing, you can use this window to verify that what you have is correct or reset it if necessary.

You can, optionally, add further client ID/client secret pairs to an application, any of which can be used to identify the application when calling an API.

## Procedure

---

To manage an application, complete the following steps:

1. Click Apps.  
The Apps page opens.
2. Select the application that you want to work with from the displayed list.
3. Click Subscriptions.
4. The client ID is hidden; to display the client ID, select the Show check box. The client ID is displayed, and can be hidden again by clearing the Show check box.
5. To reset your client ID, click Reset.  
Warning: API calls made by the application with the existing client ID will fail.
6. If the client secret is compromised or you forget it, click Reset to generate a new value for the client secret.
7. If you are unsure whether the value that you have for the client secret is correct, you can click Verify, enter the value, and click Submit to confirm whether or not it is correct.
8. To add an additional client ID and client secret to the application, complete the following steps:
  - a. Click Subscriptions.
  - b. Click Add alongside Credentials.  
The "Add new application credentials" window opens.
  - c. Enter a name and an optional summary, and click Submit.
  - d. Select the Show Client ID or Show Client Secret check box to display the client ID or client secret for the new credentials.
  - e. To add a description to a set of client credentials, or to change the current description, click Update alongside the required credentials.
  - f. To remove a set of client credentials from the application, click Delete alongside the required credentials.If you add additional credentials to an application, any of the associated client ID/client secret pairs can be used to identify the application when calling an API.  
Note: If you add two or more sets of client credentials to an application, OAuth tokens are not shared between them; each client credential set uses a different OAuth token.
9. To view more details about an individual API, click the API name.  
The operations are listed.
10. To unsubscribe from a Plan, click Unsubscribe alongside the Plan name.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Editing an application

You can edit applications in the Developer Portal. If a user has the correct permissions, they can edit the content of any application in their organization.

---

## Procedure

---

1. From the Developer Portal home page, click Apps.
2. Select the target application.
3. Click Edit from the application overflow menu.
4. Make any required changes, then click Submit.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Deleting an application

You can delete applications in the Developer Portal.

---

## Procedure

---

1. From the Developer Portal home page, click Apps.
2. Select the required application.
3. Click Delete from the application overflow menu.
4. Click Delete again to confirm.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Changing an application image

You can change the image for an application in the Developer Portal.

---

## Procedure

---

1. From the Developer Portal home page, click Apps.
2. Select the required application.
3. Click Upload image from the application overflow menu.
4. Browse for the target image, then click Submit.  
You can remove the image by clicking Remove.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Verifying an application client secret

You can verify an application client secret in the Developer Portal

---

## Procedure

---

1. From the Developer Portal home page, click Apps.
2. Select the target application.
3. Click Subscriptions.
4. Click Verify for the client secret.
5. Enter your secret string and click Submit.  
You receive a notification saying whether or not the secret that you entered is correct.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Analytics in the Developer Portal

You can view analytics for APIs in the Developer Portal at the application and organization levels. This information is displayed in dashboard views that show the analytics metrics in the form of *visualizations* (represented as charts).

Restriction:

- If the Catalog that is associated with this Developer Portal has two or more gateway services enabled then, for analytics data to be available, the gateway services must all be associated with the **same** analytics service. If the set of associated analytics services for the gateway services includes two or more different analytics services then the Developer Portal does **not** display analytics data. An analytics service is associated with a gateway service in the Cloud Manager user interface; see [Associating an analytics service with a gateway service](#).
- If the visualizations in your dashboard views display no data or show data only for a time period in the past, a possible reason might be that access to analytics data within API Connect has been switched off. Contact your API provider for confirmation.

Use the following topic links to learn how to access the various analytics available to you in the Developer Portal:

- [Application analytics in the Developer Portal](#)  
From the Developer Portal, you can view interactive analytic information about all of the APIs used by an application.
- [Organization analytics in the Developer Portal](#)  
From the Developer Portal, you can view interactive analytic information about all of the APIs within an organization.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Application analytics in the Developer Portal

From the Developer Portal, you can view interactive analytic information about all of the APIs used by an application.

### About this task

---

All members of the consumer organization can view analytics information relating to APIs used by an application.

### Procedure

---

1. Click Apps from the Developer Portal dashboard.
2. Click the name of the application for which you want to view analytic information.  
From the Dashboard tab, you can see your application analytics including, API Stats, Total Calls, and Total Errors.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Organization analytics in the Developer Portal

From the Developer Portal, you can view interactive analytic information about all of the APIs within an organization.

### About this task

---

All members of the consumer organization can view analytics information relating to the APIs that are used within an organization.

### Procedure

---

1. Click your userName from the Developer Portal dashboard.
2. From the drop-down menu, select My organization.
3. Click the Analytics tab.  
From the Analytics tab, you can see your organization analytics including, API Stats, Total Calls, and Total Errors.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Consumer organizations in the Developer Portal

Consumer organizations provide a way of grouping application developers together. You can add, remove, and configure Consumer organizations in the Developer Portal.

Developer Portal users must be a member of at least one Consumer organization. A Consumer organization can have multiple members and multiple applications. Members must register an application before they can subscribe to an API. A Consumer organization owns all the applications that are created within it. The members do not own any applications. As long as there is one member of a Consumer organization, all applications continue unchanged.

Note: Every account in the Developer Portal, including across different user registries for the same site, must have a unique email address, including the site Admin account. For example, if you configure three different user registries for a particular Developer Portal site, the email address *alice@acme.com* can be used to log in to the site from only one of the user registries. The default email address for the Admin account is the email address of the Catalog owner. It is not possible to create a user account (and associated Consumer organization) with the same email address as the Admin account (or that of the Catalog owner if their email address is different). Any attempts to create an account with the same email address results in the new account not functioning correctly, and returning the following error message when trying to log in: **A user already exists with this email address.**

To learn more about Consumer organizations in the Developer Portal, see the following topics.

- [Adding a Consumer organization from within the Developer Portal](#)  
You can create a new Consumer organization from within your user account in the Developer Portal. The new Consumer organization appears also in the API Manager UI after it is created.
- [Editing the name of a Consumer organization](#)  
You can edit the name of your Consumer organization from within the Developer Portal.
- [Switching Consumer organizations](#)  
You can switch from one Consumer organization to another in the Developer Portal.
- [Adding users to a Consumer organization](#)  
If the API Provider organization administrator has granted you permission to collaborate, you can invite users to join your Consumer organization. Those organization members can then access the Developer Portal and use the APIs that have been made available to the Consumer organization.
- [Removing a user from a Consumer organization](#)  
You can remove a developer from a Consumer organization in the Developer Portal.
- [Changing the ownership of a Consumer organization](#)  
You can change the ownership of a Consumer organization in the Developer Portal.
- [Deleting a Consumer organization](#)  
You can delete a Consumer organization in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Adding a Consumer organization from within the Developer Portal

You can create a new Consumer organization from within your user account in the Developer Portal. The new Consumer organization appears also in the API Manager UI after it is created.

### Procedure

---

1. Sign in to your user account in the Developer Portal.
2. Click the arrow next to your Consumer organization name on the Developer Portal home page.
3. Select Create organization from the drop-down menu.
4. In the Organization Title field, type the name of the new Consumer organization, then click Submit.

### Results

---

Your new Consumer organization is created, and you can switch to it by clicking on its name in the Organization drop-down menu on the home page.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Editing the name of a Consumer organization

You can edit the name of your Consumer organization from within the Developer Portal.

### Procedure

---

1. Sign in to your user account in the Developer Portal.
2. Click the arrow next to your Consumer organization name on the Developer Portal home page, and click My organization.
3. In the Manage tab, click the vertical ellipsis Manage organization icon, and click Edit organization.
4. Enter the new name for your Consumer organization in the Organization Title field, and then click Submit.  
You changed the name of your Consumer organization.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Switching Consumer organizations

You can switch from one Consumer organization to another in the Developer Portal.

### Procedure

---

1. If you are a member of more than one Consumer organization, click the menu of Consumer organizations in the Developer Portal home page.
2. Select the Consumer organization that you want to switch to, and ensure that any applications you register are registered to the correct catalog.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Adding users to a Consumer organization

If the API Provider organization administrator has granted you permission to collaborate, you can invite users to join your Consumer organization. Those organization members can then access the Developer Portal and use the APIs that have been made available to the Consumer organization.

### About this task

---

Depending on the permissions enabled by the Provider organization administrator, members can view applications and application activity, create and edit applications, manage client keys and subscribe to API Plans, or perform all activities.

**Note:** Every account in the Developer Portal, including across different user registries for the same site, must have a unique email address, including the site Admin account. For example, if you configure three different user registries for a particular Developer Portal site, the email address *alice@acme.com* can be used to log in to the site from only one of the user registries. The default email address for the Admin account is the email address of the Catalog owner. It is not possible to create a user account (and associated Consumer organization) with the same email address as the Admin account (or that of the Catalog owner if their email address is different). Any attempts to create an account with the same email address results in the new account not functioning correctly, and returning the following error message when trying to log in: **A user already exists with this email address.**

### Procedure

---

To invite users to join your Consumer organization, complete the following steps.

**Note:** The ability to invite users is only visible if the API Provider organization administrator has granted you permission to collaborate.

1. Sign in to your user account in the Developer Portal.
2. Click the arrow next to your Consumer organization name on the Developer Portal home page, and click My organization.  
The organization page is displayed.
3. On the Manage tab, select Invite.
4. Enter the email address of the new user in the Email field.
5. Under the Assign Roles heading, use the radio buttons to select a role for the new user, the roles are:
  - **Administrator**-- Can administer the Consumer organization, including invite new members, and can create, and edit applications, manage client keys, and subscribe to API Plans.
  - **Developer**-- Can create and edit applications, manage client keys, and subscribe to API Plans.
  - **Viewer**-- Can only view applications and application activity.

For full details of the permissions that are assigned to the Developer Portal roles, see [API Connect user roles](#).

6. Click Submit.  
An invitation is sent to the new user.

### Results

---

The user is added to the Consumer organization list of members, and they are sent an email inviting them to join the organization. The user must click the link that is provided in the email to activate their account, and complete the setup.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Removing a user from a Consumer organization

You can remove a developer from a Consumer organization in the Developer Portal.

## Before you begin

---

You must be the owner of your Consumer organization and have previously added the developer you wish to remove from the organization. Note that removing a user from a Consumer organization does not delete their user account, it only removes them from that organization.

## Procedure

---

1. Click your user name in the Developer Portal home page.
2. Click My organization in the menu.
3. Click Remove user for the user you want to remove.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Changing the ownership of a Consumer organization

You can change the ownership of a Consumer organization in the Developer Portal.

## Before you begin

---

You can change the ownership of a Consumer organization only if you are the owner of that organization. The user that you transfer ownership to must already be a member of the organization. To have an account on a Developer Portal, you must be a member of at least one Consumer organization.

## About this task

---

Transferring the ownership of a Consumer organization to another organization member, changes your role in that organization to App Developer.

## Procedure

---

1. Click your Organization name in the Developer Portal home page, and select the organization whose owner you want to change by using the drop-down arrow.

2. Click your Organization name in the Developer Portal home page, and select My organization.
3. Click the options icon, , and select Change ownership.

## Update the consumer organization owner

New Owner

apic demo user

Assign Previous Owner's Role

Administrator

Developer

Viewer

Cancel

Save

4. Select the **New Owner** by using the drop-down arrow.
5. Use the radio buttons to **Assign Previous Owner's Role**, then click Submit.

### Results

You successfully transferred ownership of a Consumer organization in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Deleting a Consumer organization

You can delete a Consumer organization in the Developer Portal.

### Before you begin

You can delete a Consumer organization only if you are the owner of that organization. To have an account on a Developer Portal, you must be a member of at least one Consumer organization. Therefore, if you are a member of only one Consumer organization, to delete that organization you must first either join or create another Consumer organization, or you can delete your whole developer account. For more information, see [Deleting your developer account](#).

### About this task

Deleting a Consumer organization in the Developer Portal permanently removes access to the organization, and all of its applications and subscriptions, for all members of the organization. Consider carefully the impact on any members of your Consumer organizations before you delete the organization. Any users that were members of only the deleted organization, must create a new Consumer organization when they next logon to the Developer Portal.

Important: When an organization is deleted, it cannot be reactivated. You might want to consider changing the ownership of a Consumer organization, rather than deleting it. For more information, see [Changing the ownership of a Consumer organization](#).

### Procedure

1. Click your Organization name in the Developer Portal home page, and select the organization that you want to delete by using the drop-down arrow. You must be in more than one Consumer organization.

2. Click your Organization name in the Developer Portal home page, and select My organization.
3. Click the options icon, , and select Delete organization.

4. Click Delete.

## Results

You permanently deleted a Consumer organization in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

# User accounts, passwords, and support in the Developer Portal

You can change general elements such as user accounts and passwords in the Developer Portal.

Note: Every account in the Developer Portal, including across different user registries for the same site, must have a unique email address, including the site Admin account. For example, if you configure three different user registries for a particular Developer Portal site, the email address *alice@acme.com* can be used to log in to the site from only one of the user registries. The default email address for the Admin account is the email address of the Catalog owner. It is not possible to create a user account (and associated Consumer organization) with the same email address as the Admin account (or that of the Catalog owner if their email address is different). Any attempts to create an account with the same email address results in the new account not functioning correctly, and returning the following error message when trying to log in: **A user already exists with this email address.**

To learn about general user features of the Developer Portal, see the following topics:

- [Creating a new developer account](#)  
You can create new developer accounts, and their associated Consumer organizations, in the Developer Portal.
- [Changing your account settings](#)  
You can edit your user account settings in the Developer Portal, such as changing your name, password, time zone, and language settings.
- [Deleting your developer account](#)  
You can delete your account in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Creating a new developer account

You can create new developer accounts, and their associated Consumer organizations, in the Developer Portal.

---

### Before you begin

You need to provide an email address to create a new account. That email address must be a valid email address, and the domain that is used is required to have a valid MX record that is determined by DNS. You can disable the security module that checks that the email domain has a DNS record.

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Navigate to Extend > Disable module.
4. In the search bar enter `check_dns`, then select the `check_dns` module and click Disable.
5. Click Disable to confirm that you want to disable the module.

---

### About this task

In order to use the Developer Portal, you must have a developer account, and be a member of at least one Consumer organization. When you create a developer account, a Consumer organization is created at the same time. You can be an owner, and a member of, multiple Consumer organizations. For more information about Consumer organizations, see [Consumer organizations in the Developer Portal](#).

Note: Every account in the Developer Portal, including across different user registries for the same site, must have a unique email address, including the site Admin account. For example, if you configure three different user registries for a particular Developer Portal site, the email address *alice@acme.com* can be used to log in to the site from only one of the user registries. The default email address for the Admin account is the email address of the Catalog owner. It is not possible to create a user account (and associated Consumer organization) with the same email address as the Admin account (or that of the Catalog owner if their email address is different). Any attempts to create an account with the same email address results in the new account not functioning correctly, and returning the following error message when trying to log in: **A user already exists with this email address.**

---

### Procedure

1. From the Developer Portal home page, click Create account.
2. Populate the available fields with the details of the developer account and Consumer organization that you want to create.
3. Click Sign up.  
The email address that you provided for the new developer account is sent an email that contains an activation link for the new developer account. Use this link to activate your new account.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Changing your account settings

You can edit your user account settings in the Developer Portal, such as changing your name, password, time zone, and language settings.

---

### About this task

You can edit various details about your user account, for example, change your password, update your code snippet language, change your time zone, select your preferred site language, and select an avatar.

## Procedure

---

1. Click your user name in the Developer Portal home page, and click My account.
2. To update your password, click Change Password, and update the fields as required.
3. To update other elements of your account, such as your name, time zone, and language, click Edit and update the fields as required.
4. Click Save to save your changes.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Deleting your developer account

You can delete your account in the Developer Portal.

### Before you begin

---

You must be the owner of the developer account that you want to delete, and you must not own more than one Consumer organization. If you do own more than one Consumer organization, you must either change the ownership of those organizations, or delete them, before you can delete your account. If you own only one Consumer organization, when you delete your account the Consumer organization is deleted at the same time as your account.

### About this task

---

When you delete your account, any Consumer organizations that you own must also be deleted or transferred to new owners. If there are other members in a Consumer organization that you delete, these members will no longer have access to that organization, or any of its applications and subscriptions. Consider carefully the impact on any members of your Consumer organizations before you delete your account. For more information, see [Deleting a Consumer organization](#). Important: When an organization has been deleted, it cannot be reactivated. You might want to consider changing the ownership of your Consumer organizations before you delete your account. For more information, see [Changing the ownership of a Consumer organization](#).

## Procedure

---

1. Click your user name in the Developer Portal home page, and select My account.
2. Click the Edit tab.
3. Click Delete account.
4. Click Delete to confirm deletion of the account.  
This action deletes your developer account and, if you own a Consumer organization, this organization is also deleted.

## Results

---

You successfully deleted your developer account in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Configuring the Developer Portal site

Customize the look and feel of your Developer Portal site, and brand it for your organization.

In IBM® API Connect Version 10 the Developer Portal is based on the open source Drupal 9 content management system, and consequently it is almost infinitely customizable. What an individual user is able to configure, depends on the role the user has been assigned, and the associated permissions of that role. A user can be assigned one of four Developer Portal roles:

#### Authenticated user

An authenticated user is, typically, an application developer, and can perform all of the actions that are described in the [Using the Developer Portal](#) section.

#### Forum Moderator, Content Author, or Administrator

In addition to performing all of the tasks that an Authenticated user role can, a Forum Moderator, Content Author, or Administrator role have additional permissions related to configuring the Developer Portal site. For more information, see [Working with roles in the Developer Portal](#).

Note: By default, the Developer Portal administration operations are available only if you have Administrator access.

Before you start to configure your Developer Portal site, you should familiarize yourself with the various concepts and terminology that is referenced throughout the Developer Portal. See [Concepts in the Developer Portal](#).

When you are ready to start configuring your Developer Portal site, see [Getting started configuring the Developer Portal site](#) for a quick start guide on customization. There is also a tutorial that you can follow that takes you through an example customization scenario; see [Tutorial: Creating a custom theme for the Developer Portal](#).

If you are migrating from Version 5 to Version 10, see [Migrating your Developer Portal from Version 5 to Version 10](#) for guidance about how to transfer any specific customizations, such as custom modules and themes, from the Drupal 7 baseline to the Drupal 9 baseline.

In addition to the previous options, Developer Portal configuration operations are described in detail in the following sections:

#### [Appearance](#)

Control and configure the general appearance of your Developer Portal site by setting and configuring a default theme.

Important: Editing API Connect themes, modules, or Drupal core on the filesystem is not permitted or supported. For more information, see [Creating a sub-theme](#) and [Extend](#).

#### [Content](#)

Control multiple content entities in the Developer Portal, including the customization and restriction of specific content.

#### [Structure](#)

Control the layout of the Developer Portal, such as configuring the front page, adding and changing blocks, and displaying Products and APIs in categories.

#### [Configuration](#)

As an administrator, you can control multiple aspects of the Developer Portal configuration, including managing security and general configuration tasks.

#### [People](#)

You can manage and customize the user experience in the Developer Portal, by altering permissions and assigning roles to specific users.

#### [Forums](#)

Create and control forums in the Developer Portal.

#### [Reports](#)

You can view reports about the general configuration and status of your Developer Portal site.

#### [Extend](#)

You can extend the Developer Portal by creating and installing custom modules, or installing additional Drupal 9 contributed modules.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Concepts in the Developer Portal

The Developer Portal is built on Drupal 9, an open source content management technology. A good understanding of Drupal concepts and terminology enhances your ability to work with the Developer Portal.

In Drupal, most content on the website is treated as variations on the concept of a **node**. Node types, such as static pages, blog posts, and news items, are all stored in the same way. The navigation structure of the site is designed separately by editing **menus**, **views**, and **blocks**. Finally, the **theme** of the system controls the overall appearance of the site to visitors. Access to these depends on the permissions that your role possesses. These are explained more fully in the following sections.

## Nodes

---

A node is a set of individual related content such as a page, a poll, an article, a forum topic, or a blog post. For example, when you create a blog post, and define the body text, you also define its title, content, author link, creation date, and taxonomy. Some of these elements are shown by the theme layer when the node is displayed, and some elements are metadata that control where and when the node is displayed at all. Each set of content in a Developer Portal site is a node. You can apply new features or changes to all content of a single node type.

## Fields

---

A field is somewhere that you can add extra metadata to a node. The following types of data are examples of fields:

- Title
- Body
- Comment body
- Tags
- Image

You can create different types of fields, and they can be defined at the content-type level for content items and comments, at the vocabulary level for taxonomy terms, and at the site level for user accounts. Field types are defined by modules, and managed by the Field module. In addition, other modules might enable fields to be defined for their data.

## Content types

---

A content type is a predefined collection of fields. Content types define the default fields that content editors use to add content in a Developer Portal site, and help structure the authoring and developing of content. Content types can be displayed in the Developer Portal. You can control which content types, and the order and format that they are displayed, in the Developer Portal.

## Themes

---

You can use themes to control the overall appearance of your Developer Portal site. You can modify the appearance of the theme in following ways:

1. Extend the code of an existing theme.
2. Identify and use a theme that is provided by the Drupal community or a third-party website, and modify the theme settings.

3. Create a complete custom theme from scratch.

However, you cannot directly edit the API Connect theme as editing is not supported. Any edited versions of these files are overwritten when a fix pack or iFix is installed. So, the way to create a custom theme is to create a custom subtheme of the standard API Connect theme that the Developer Portal uses by default. A subtheme inherits all of the settings of its parent theme, apart from the settings that are overridden. For more information, see [Creating a sub-theme](#).

Most themes use the Twig template engine for PHP.

---

## Regions

The specific areas of a Developer Portal site in which content can be placed. Regions are customized and styled in the theme.

---

## Blocks

Blocks are boxes of content that can be displayed in regions on your Developer Portal page. Blocks can be made available to your Developer Portal site by enabling specific modules. After a block is created, its appearance can be modified. You can also define which Developer Portal page or pages blocks appear on. Some modules can provide multiple blocks when they are enabled, while other modules might not define new blocks. For more information, see [Adding and changing the blocks displayed on Developer Portal pages](#).

---

## Modules

Modules are similar to the concept of plug-ins, in that they extend the core functions of the Developer Portal site. A set of modules is implemented by default with the Drupal core, and there are extra modules that can be enabled to extend the default functions. You can find and add more modules to your Developer Portal site from the internet. For more information, see [Extend](#).

---

## Views

You can use views to manipulate the content that is displayed on a page, block, and other visual elements in the Developer Portal site. Views can be used along with content types to format the appearance of your site to your specification. For more information, see [Using the Views module in the Developer Portal](#).

---

## Pages

Pages are used by the features that can modify the appearance of the Developer Portal to customize the appearance of your Developer Portal site. Pages can be customized to be as specific as you require, and can be configured to satisfy the context of the situation that they are used in.

---

## Users

After you log in to the Developer Portal site, you have a user record in the Developer Portal database. User ID 1 is always reserved for the administrator account. Regardless of whether other user accounts are using remote authentication such as LDAP, the administrator account is always a local account to enable administration of the Developer Portal site. For more information, see [People](#).

---

## Roles

A role is a collection of permissions that define the actions that a user can do in the Developer Portal site. Users can be given one or more roles. By default, a user that is logged in to the Developer Portal is in the Authenticated role. Other roles that can be assigned to a user include:

- Administrator
- Forum Moderator
- Content Author

You can also create new custom roles. For more information, see [Working with roles in the Developer Portal](#).

---

## Permissions

Permissions define the actions that a user can or cannot do in a Developer Portal site. Permissions are additive. If a permission that enables a user to do an action is not assigned, the user cannot do the action. If a user has multiple roles, and any of them contain a specific permission, the user is able to do that action. There are also permissions that have security implications, and you are recommended to assign those permissions to trusted roles. For more information, see [Controlling access to Developer Portal content](#).

---

## Templates

Template files define how the output of a particular component can look. They are formatted as Twig template files. The following are examples of where you can use templates:

- `html.html.twig` - the template for Developer Portal HTML pages
- `page.html.twig` - the body of Developer Portal HTML page
- `node.html.twig` - the template for all of the content nodes
- `comment.html.twig` - the template for all of the comment nodes
- `search-result.html.twig` - the template for search results
- `node--product.html.twig` - the template for nodes that use the Product content type
- `node--product--teaser.html.twig` - the template for the previews for the Product content type

For more information about overriding templates in the Developer Portal, see [Applying a modified content type template](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Getting started configuring the Developer Portal site

A quick start guide to the main tasks involved in configuring the Developer Portal to your brand or theme.

The Developer Portal is based on the open source Drupal 9 content management software, and consequently is almost completely customizable. The following sections take you through the most common tasks to get started with branding the Developer Portal to your organizational requirements, including links to the related topics in the main table of contents. Many more customizing options are described in the main table of contents, and the best way of finding help with a specific customization in this content, is to use the documentation search bar.

Important:

All of the customizations that are detailed in this topic are preserved when you update to new versions of API Connect. Drupal updates, as well as new functionality, defect fixes, and security updates, are made available through API Connect update packages as determined by IBM. These update packages can be applied by upgrading your deployment; see the upgrade instructions for your platform in [Installing and maintaining your IBM API Connect cloud](#). To find out what update packages are available, select your product on [IBM Fix Central](#).

Directly editing any API Connect themes, modules, or Drupal core on the file system is not permitted or supported, as edited versions of these files are overwritten when an update package is installed. Customizations must be done by using the proper mechanisms as described in this topic, such as custom modules and themes, and not by directly editing the source.

For more information about the API Connect support policy, see [IBM® API Connect Support Lifecycle Policy](#).

- [Create a custom theme](#)
- [Changing the page layout](#)
- [Changing the front page](#)
- [Advanced theme development](#)
- [Custom modules](#)
- [Hiding the admin login form](#)
- [What to do next - exploring the main configuration content](#)

## Create a custom theme

If you want your Developer Portal to have your corporate branding and style, you need to create a custom theme. Themes are composed primarily of Cascading Style Sheets (CSS) files, although they can include much more; see [Advanced theme development](#).

Directly editing the API Connect theme is not permitted or supported, as edited versions of these files are overwritten when a fix pack or iFix is installed. The way to create a custom theme is to create a custom sub-theme of the standard API Connect theme that the Developer Portal uses by default. A sub-theme inherits the parent theme's resources, and this means that your custom sub-theme CSS file needs to contain only the changes or overrides that you want to make from the default theme. The CSS file can contain as little or as many updates as you like.

For more information, see [Creating a sub-theme](#). You can also follow a tutorial that takes you through how to use the theme generator, customize a theme, and install a custom theme; see [Tutorial: Creating a custom theme for the Developer Portal](#).

While experience with Drupal is beneficial, the only skill you really need to create a sub-theme is CSS.

## Changing the page layout

While the theme defines *regions* of the page, such as a footer, or sidebar first, the page layout is defined by configuring which blocks appear in which regions. Blocks are controlled by using the Structure > Block layout options on the Developer Portal administrator dashboard. You can then further limit those blocks to show only on specific pages, or show on all pages except certain ones, to show only for certain roles, or for certain languages, and more.

For information about how to configure the page layout, see [Adding and changing the blocks displayed on Developer Portal pages](#).

Changing the page layout is done entirely in the Developer Portal UI as an Administrator.

## Changing the front page

The front page is a special case and does not use the blocks system that is mentioned previously. Instead, you configure it from the Structure > Pages options on the Developer Portal administrator dashboard.

For information about how to configure the front page, see [Configuring the front page](#).

Further options that you might want to consider when designing your front page include:

- Change the banner block content or image: [Changing the front page banner block](#).
- Display featured API Products by creating a featured content block: [Changing the front page Featured Content block](#).
- Create custom blocks with your own HTML content: [Adding and changing the blocks displayed on Developer Portal pages](#).
- Set up the social block to include your organization Twitter feed: [Integrating Twitter data into the social block](#).
- Add a carousel to the front page to display a series of images: [Implementing an image carousel](#).

Again, changing the front page is done entirely in the Developer Portal UI as an Administrator.

## Advanced theme development

---

The DOM structure for specific blocks and parts of the page is controlled by templates. These templates are Twig files that define the actual HTML output for a particular piece of content. You can override a Twig template by copying the original template into the templates folder of your custom sub-theme, and then editing the template to your specification. The Developer Portal then uses your template in preference to the original one. For more information, see [Applying a modified content type template](#).

Modifying Twig templates allows very fine-grained control over the structure of pages. However, it also means you might miss new features and defect fixes that are made to the original templates, as your Developer Portal is using your overrides instead of the originals. So, if you override a template, it is your responsibility to check the templates in the latest API Connect releases, and to ensure that any equivalent changes that are needed to your overrides to maintain functional equivalence are made.

If you're developing custom templates, knowledge of Twig templating language, Drupal, HTML, and CSS is recommended.

## Custom modules

---

If you need to modify the functional behavior of the Developer Portal, then you can create a custom module to do so. Drupal has an extensible programmatic API that is built around a system of *hooks*. By using these hooks in your custom modules you can change what happens when, for example, forms are displayed, forms are submitted, or make extra variables available to custom templates, and other options.

For more information on writing custom modules, see [Extend](#). You can also follow a tutorial that includes using a custom module, see [Tutorial: Adding validation to a field on the sign-up form](#).

Custom modules are written in PHP, and so Drupal experience and PHP knowledge are very beneficial.

## Hiding the admin login form

---

If your Developer Portal is public facing, you might want to hide the admin registry as an option on the login form. You can do this simply from the administrator dashboard, by clicking Configuration > System > IBM API Connect, and selecting Hide the admin registry on the login form. For more information, see [Hiding the admin registry on the login form](#).

## What to do next - exploring the main configuration content

---

There are an almost infinite number of configuration options available to you on the Developer Portal. Explore the following sections to find out more:

- [Appearance](#) - control general appearance elements, and learn how to create a custom theme.
- [Content](#) - add, configure, and control content elements, such as meta tags, custom pages, custom content types, and adding content to an API or Product.
- [Structure](#) - control how the content in your Portal is displayed, for example configuring the front page, changing block display, and using the Views module.
- [Configuration](#) - configure content moderation, perform general configuration tasks, and manage Developer Portal security.
- [People](#) - create and customize site configuration roles, control access to sites and to content, and create internal Consumer organizations to allow customization of specific API properties.
- [Forums](#) - create and control forums.
- [Reports](#) - list of available reports about the general configuration and status of your site.
- [Extend](#) - introduction to and instructions for creating custom modules, including information about developing in PHP, and how to use hooks in custom modules.
- [Developer Portal tutorials](#) - guided examples taking you through the simple and the more complex areas of configuration.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Appearance

Control and configure the general appearance of your Developer Portal site by setting and configuring a default theme.

To learn how to control the appearance of your Developer Portal site, use the following topic links.

- [Controlling general appearance elements in the Developer Portal](#)  
You can control general appearance aspects of the Developer Portal.
- [Adding custom JavaScript to a custom theme](#)  
To increase customization of the Developer Portal, you can add custom JavaScript to custom themes that you install.
- [Applying a modified content type template](#)  
You can apply a modified content type template to override a default content type template in the Developer Portal. For example, you can override the product content type template to change its layout.
- [Creating a sub-theme](#)  
Create a custom theme for your Developer Portal site by generating and configuring a sub-theme. A sub-theme is a theme that inherits all the resources of a specified parent theme. You can then override specific resources to configure your required customizations.
- [Installing additional themes](#)  
You can install additional themes in the Developer Portal.
- [Deleting themes](#)  
You can delete a theme from your Developer Portal site.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

# Controlling general appearance elements in the Developer Portal

You can control general appearance aspects of the Developer Portal.

To learn how to control general aspects of the Developer Portal appearance, use the following topic links:

- [Changing the shortcut icon](#)  
You can change the shortcut icon, or favicon, in the Developer Portal.
- [Changing the site email address](#)  
You can change the site email address in the Developer Portal.
- [Changing the site logo](#)  
You can change the site logo for your Developer Portal.
- [Changing the site name or site slogan](#)  
You can change the site name, or the site slogan, for your Developer Portal.
- [Changing the visibility of site branding](#)  
You can toggle the visibility of your site branding elements for your Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Changing the shortcut icon

You can change the shortcut icon, or favicon, in the Developer Portal.

---

### Before you begin

You must have administrator access to complete this task.

---

### About this task

The shortcut icon, or favicon, is displayed in the address bar or bookmarks of most browsers. Drupal provides a default favicon, the water drop logo, but if you want to make your Developer Portal stand out, you should provide your own. The default Drupal favicon is 32 pixels high by 32 pixels wide. As a favicon is displayed only in the address bar and favorites (bookmarks) list, any favicon that you create should be similarly small.

---

### Procedure

To change the shortcut icon, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Appearance in the administrator dashboard.
3. Click Settings for the default theme.
4. Click Favicon in the Override Global Settings section.
5. Deselect the Use the favicon supplied by the theme check box.
6. Provide a path to a custom icon on the server by entering it in the Path to custom icon field. Alternatively, you can browse for, and upload, a favicon image under the Upload favicon image subheading.
7. Click Save configuration.

Note: If the changes don't appear immediately in your browser, clear your browser's cache and reload the page. If you've bookmarked the site, you may need to delete the bookmark and then create it again, so the new favicon is used.

---

### Results

You have changed the favicon for the site.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Changing the site email address

You can change the site email address in the Developer Portal.

---

### Before you begin

You must have administrator access to complete this task.

## Procedure

---

To change the site email address, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration in the administrator dashboard.
3. Under the System heading, click Basic site settings.
4. In the SITE DETAILS section, enter the new site email address in the Email address field.
5. Click Save configuration.

## Results

---

You changed the email address for the site.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Changing the site logo

You can change the site logo for your Developer Portal.

## Before you begin

---

You must have administrator access to complete this task.

## Procedure

---

To change the site logo, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Appearance in the administrator dashboard.
3. Click Settings for the default theme.
4. Click Logo image in the Override Global Settings section.
5. Deselect the Use the logo supplied by the theme check box.
6. Provide a path to your custom logo by completing the Path to custom logo field. Alternatively, you can browse and upload a logo image under the Upload logo image subheading.
7. Click Save configuration.

Note: If the changes don't appear immediately in your browser, clear your browser's cache and reload the page.

## Results

---

You changed the site logo for your Developer Portal. How the site logo is used depends on the settings for your theme.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Changing the site name or site slogan

You can change the site name, or the site slogan, for your Developer Portal.

## Before you begin

---

You must have administrator access to complete this task.

## About this task

---

The site name is used to identify the site and can be displayed in browsers. You can also set a site slogan for your theme.

## Procedure

---

To change the site name or site slogan, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration > System > Basic site settings in the administrator dashboard.
3. In the SITE DETAILS section, enter the new site name in the Site name field, or enter a new slogan in the Slogan field.
4. Click Save configuration.

## Results

---

The site name or site slogan is updated. How the site name and the site slogan are used depends on the settings for your site theme. For more information, see [Changing the visibility of site branding](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Changing the visibility of site branding

You can toggle the visibility of your site branding elements for your Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

The site branding block includes the site logo, name, and slogan. You can choose which of these branding elements you want to be displayed in this block.

### Procedure

---

To change the visibility of your site branding elements, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure > Block layout in the administrator dashboard.
3. Find the Site branding block in the Navigation section, and click Configure.
4. In the TOGGLE BRANDING ELEMENTS section, use the check boxes to select which branding elements you want to be visible.
5. Click Save block to save your changes.

## Results

---

You changed the visibility of your site branding elements. How these elements are used depends on the settings for your theme.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Adding custom JavaScript to a custom theme

To increase customization of the Developer Portal, you can add custom JavaScript to custom themes that you install.

### Procedure

---

1. Add your JavaScript file to your theme. For example, in a sub-directory named js and the file **myfilename.js**.
2. Add the JavaScript file to your theme, by editing your {custom\_theme}.libraries.yml file and adding in the JavaScript file.

An example of the JavaScript file:

```
myfile:
  js:
    js/myfilename.js: {}
```

3. Add the following code to your theme's .info.yml file:

```
libraries:
- {custom_theme}/myfile
```

Note: You must replace {custom\_theme} with your theme name. Also, both files must reference **myfile**.

4. Zip up the directory and upload it to your portal site. For more information, see [Installing additional themes](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Applying a modified content type template

You can apply a modified content type template to override a default content type template in the Developer Portal. For example, you can override the product content type template to change its layout.

## Before you begin

---

You must have administrator access to complete this task.

You must also have a custom sub-theme, and a copy of an existing template that you want to update. For information about how to create a sub-theme, see [Creating a sub-theme](#).

To obtain a copy of an existing template, you can download a copy from the following locations on GitHub:

- [https://github.com/ibm-apiconnect/devportal/tree/master/ibm\\_apim/templates](https://github.com/ibm-apiconnect/devportal/tree/master/ibm_apim/templates)
- [https://github.com/ibm-apiconnect/devportal/tree/master/apic\\_api/templates](https://github.com/ibm-apiconnect/devportal/tree/master/apic_api/templates)
- [https://github.com/ibm-apiconnect/devportal/tree/master/apic\\_app/templates](https://github.com/ibm-apiconnect/devportal/tree/master/apic_app/templates)
- <https://github.com/ibm-apiconnect/devportal/tree/master/product/templates>
- <https://github.com/ibm-apiconnect/devportal/tree/master/consumerorg/templates>

Note that you must copy the template to your sub-theme, and then modify the content. Do not modify the content that is stored on GitHub.

## About this task

---

You can override the Developer Portal core templates by creating a custom sub-theme, and then adding your modified templates to the sub-theme folder. A sub-theme inherits all of the settings of its parent theme, apart from the settings that are overridden, such as by applying modified templates. After you have applied a modified content types template, these changes take precedence over the default content types template. The Developer Portal templates are formatted as Twig template files. The following levels are examples of where you can use templates:

- `html.html.twig` - the template for Developer Portal HTML pages
- `page.html.twig` - the body of Developer Portal HTML page
- `node.html.twig` - the template for all of the content nodes
- `comment.html.twig` - the template for all of the comment nodes
- `search-result.html.twig` - the template for search results
- `node--product.html.twig` - the template for nodes that use the Product content type
- `node--product--teaser.html.twig` - the template for the previews for the Product content type

For more information about Twig templates, see [Working with Twig templates](#) and [Debugging Twig templates](#) on the Drupal documentation website. Modifying Twig templates allows very fine-grained control over the structure of pages. However, it also means you might miss new features and defect fixes that are made to the original templates, as your Developer Portal is using your overrides instead of the originals. So, if you override a template, it is your responsibility to check the templates in the latest API Connect releases, and to ensure that any equivalent changes that are needed to your overrides to maintain functional equivalence are made.

Important:

Directly editing any API Connect theme files is not permitted or supported, as edited versions of these files are overwritten when a fix pack or iFix is installed.

## Procedure

---

To override a default content type template:

1. Apply the modifications that you require to the default template that you obtained.  
Warning: Although the ability to override templates is supported, if you override a template they are your responsibility. Templates can be from multiple sources and compatibility with an earlier version is not ensured. You must check the templates in the latest API Connect release to check whether you need to make equivalent changes to your overrides to maintain functional equivalence.
2. Create a directory in your custom sub-theme, and name it `templates`.
3. Add your modified template to the `templates` directory.  
Note: The modified template file name must be identical to the original name of the template file that it is overriding.
4. Log in to the Developer Portal UI as an administrator.
5. If the administrator dashboard is not displayed, click `Manage` to display it.
6. Install your custom sub-theme onto the Developer Portal by clicking `Appearance > Install new theme on the administrator dashboard`.
7. Click `Choose file`, select your sub-theme, and then click `Install`.
8. Click `Install newly added theme`, find your new theme in the list of `Uninstalled themes`, and click `Install` and set as default to set your new custom sub-theme as the default theme for your site.  
Your new theme, which contains the modified template file, is now set as the default theme, and is listed in the `Installed themes` section.

## Results

---

You successfully modified and applied a template to override a default content type template in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Creating a sub-theme

Create a custom theme for your Developer Portal site by generating and configuring a sub-theme. A sub-theme is a theme that inherits all the resources of a specified parent theme. You can then override specific resources to configure your required customizations.

## Before you begin

You must have administrator access to complete this task.

## About this task

Directly editing the API Connect theme isn't permitted or supported, as edited versions of these files are overwritten when a fix pack or iFix is installed. So, the way to create a custom theme is to create a custom sub-theme of the standard API Connect theme that the Developer Portal uses by default. You can also create a sub-theme that is based on one of the following color templates:

Emerald Green

The screenshot shows the Acme Bank website with an Emerald Green theme. The header features the Acme Bank logo and navigation links: API Products, Apps, Blogs, Forums, and Support. A search bar contains 'myorg' and a user profile icon. The main banner has a dark background with a blue and green diagonal gradient. The text reads: 'Brace yourselves. APIs are coming.' followed by 'Explore, subscribe to and be creative with our APIs. We can't wait to see what you come up with!' and a green button labeled 'Explore API Documentation'. Below the banner are four columns: 'Let's get started!', 'Sign up' (with subtext 'Create a new account and get started with our APIs. It's free to join.' and a clock icon), 'Explore our APIs' (with subtext 'Take a look at our API products and quickly find APIs to construct a fully featured application' and a network icon), and 'Create' (with subtext 'Subscribe to a plan and create your application to make use of our APIs.' and a document icon). A decorative bar at the bottom consists of several vertical bars in shades of green.

Golden Brown

The screenshot shows the Acme Bank website with a Golden Brown theme. The layout is identical to the Emerald Green version, but the banner background is a solid golden yellow. The 'Explore API Documentation' button is dark brown. The decorative bar at the bottom consists of several vertical bars in shades of brown and gold.

Ruby Red

The screenshot shows the Acme Bank website with a Ruby Red theme. The layout is identical to the other versions, but the banner background is a solid light blue. The 'Explore API Documentation' button is red. The decorative bar at the bottom consists of several vertical bars in shades of red and grey.

Selecting a color template provides you with a base theme that you can build on more easily to produce your required site branding and styling. Create a sub-theme by using the theme generator in the Developer Portal UI, customize the appearance as required, and then upload the compressed file back onto the site.

Important:

- You're not permitted to include any IBM® API Connect code within any custom themes that you create. Also, directly editing any API Connect themes on the file system is not permitted or supported, as edited versions of these files are overwritten when a fix pack or iFix is installed.
- All custom development is your responsibility. Although the use of custom themes is supported, IBM API Connect do not provide support in their development or modification.

For a guided example on creating a sub-theme, see [Tutorial: Creating a custom theme for the Developer Portal](#). In this example, you create a sub-theme, and then customize the styling by editing the `overrides.css` file.

## Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. On the administrator dashboard, click Appearance, > Generate sub-theme.  
The Generate sub-theme page is displayed.
3. Enter a Sub-theme name, and select the Sub-theme type that you would like to use. The name can contain only lowercase characters a - z, and numerals 1 - 9.
  - CSS - Cascading Style Sheets; the language that is used to describe how to display the HTML elements in the theme.
  - SCSS - Sass CSS; a superset of CSS. SCSS contains all the features of CSS, but is extended to include the features of Sass as well. However, SCSS must be compiled into CSS before it can be installed and used in the Developer Portal.
4. Select the template to base your sub-theme on:
  - Default - the standard connect\_theme that the Developer Portal is based on.
  - Business Mono - a black and white color theme.
  - Sapphire Blue - a blue color theme.
  - Emerald Green - a green color theme.
  - Golden Brown - a brown color theme.
  - Ruby Red - a red color theme.
5. Click Generate.  
Your sub-theme is available to download from the Generate sub-theme page.
6. Click your new sub-theme and save it to your preferred location.
7. Extract the resources from the sub-theme file, and then edit the specific resources to configure the customizations that you require.  
Define your theme by creating metadata in the `your_theme_name.info.yml` file. You can then customize the appearance of your theme by configuring the `overrides.css` file. For detailed information about how to customize themes, see [Theming Drupal](#).
8. After you have completed your customizations, compress the sub-theme resources back into the .zip file.  
Note that the following file extensions are also supported: tar, tgz, gz, and bz2.
9. Install your new sub-theme onto the Developer Portal by clicking Appearance, > Install new theme.
10. Click Choose file, select your sub-theme, and then click Install.
11. Click Install newly added theme, find your new theme in the list of Uninstalled themes, and click Install and set as default to set your new custom sub-theme as the default theme for your site.  
Your new theme is now set as the default theme, and is listed in the Installed themes section.

## Results

---

You created and installed a new sub-theme for your Developer Portal site.

## What to do next

---

You can edit the display settings for your new theme, by clicking Settings next to your theme.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Installing additional themes

---

You can install additional themes in the Developer Portal.

## Before you begin

---

You must have administrator access to complete this task.

## Procedure

---

To install additional themes, complete the following steps:

1. Click Appearance in the administrator dashboard.
2. Click + Install new theme.
3. You can enter a path to the theme in the Install from a URL field. Alternatively, you can upload a theme under the Upload a module or theme archive to install heading.
4. Click Install.
5. Click Enable newly added themes.
6. Click Enable and set default for the theme that you want to be displayed in the Developer Portal.  
Your theme is displayed in the Developer Portal when you navigate to the home page.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Deleting themes

You can delete a theme from your Developer Portal site.

---

## Before you begin

You must have administrator access to complete this task.

---

## About this task

If you have a custom theme which is disabled, you can remove it from the Developer Portal. Deleting a theme is useful if you have identified a theme that you do not want to use again.

---

## Procedure

1. Click Appearance from the administrator dashboard.
2. Identify the custom theme that you want to delete, and ensure that it is disabled.
3. Click Delete against the theme.  
The theme is now deleted from your Developer Portal site.

---

## Results

You deleted a disabled theme in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Content

Control multiple content entities in the Developer Portal, including the customization and restriction of specific content.

A *content entity* is an item of content data, which can consist of text, HTML markup, images, attached files, and other data that is intended to be displayed to site visitors. Content entities can be defined by the core software or by modules. Content entities are grouped into *entity types*, which have different purposes and are displayed in different ways on the site. Most entity types are also divided into *entity sub-types*, which are divisions within an entity type to allow for smaller variations in how the entities are used and displayed.

The Developer Portal site contains the following content entity types:

- API
- Application
- Article
- Basic page
- Blog post
- Book page
- Consumer Organization
- FAQ
- Forum Topic
- Product

Within content entity items the data is stored in individual *fields*, each of which holds one type of data, such as formatted or plain text, images or other files, or dates. Field types can be defined by the core software or by modules.

Fields can be added by an administrator on content entity sub-types, so that all the entity items of a given entity sub-type have the same collection of fields available. When you create or edit entity items, you are specifying the values for the fields on the entity item.

To learn how to configure the content entities of your Developer Portal site, use the following topic links.

- [Adding content elements in the Developer Portal](#)  
You can add content elements in the Developer Portal.
- [Configuring and restricting content in the Developer Portal](#)  
You can configure and restrict certain content elements in the Developer Portal.

## Adding content elements in the Developer Portal

You can add content elements in the Developer Portal.

To learn how to add various content elements in the Developer Portal, use the following topic links:

- [Adding and configuring meta tags](#)  
You can customize the Developer Portal by adding and configuring meta tags.
- [Adding custom pages](#)  
You can create custom pages within the Developer Portal. You can add a basic page for static content, or an article for news content.
- [Integrating Twitter data into the social block](#)  
You can retrieve and integrate data from a Twitter account of interest and display it into a social block in a Developer Portal site.
- [Adding content in multiple languages](#)  
You can create content in multiple languages in the Developer Portal.
- [Adding custom pages to APIs and Products](#)  
After you create a custom page in the Developer Portal, you can add a link to the new page to any APIs and Products that exist in the Developer Portal.
- [Adding new frequently asked questions](#)  
You can add new FAQs to the Developer Portal.
- [Applying an image to an API or Product](#)  
You can apply an image to an API or a Product in the Developer Portal.
- [Attaching a documentation file to APIs](#)  
You can attach a file to APIs in the Developer Portal, and display them as documentation attachments. You can attach multiple files to APIs.
- [Configuring blogs](#)  
You can post new blog entries in the Developer Portal, and configure them to suit your requirements. You can also turn blogs off.
- [Configuring the taxonomy menu block](#)  
To display your tag hierarchy in the Developer Portal, you must configure the taxonomy menu block.
- [Customizing the URL alias for a specific API or Product page](#)  
You can customize the URL of an API or Product page from the default alias that they are assigned.
- [Embedding multimedia in site content](#)  
You can embed multimedia elements in site content in the Developer Portal.
- [Linking from one piece of site content to another](#)  
You can link from one piece of site content to another in the Developer Portal.
- [Linking to social media sites](#)  
You can link to social media sites from the Developer Portal. You can configure where and how these links are displayed and which sites you want to link to.
- [Managing tags in the Developer Portal](#)  
These instructions show you how to add new tags to your taxonomy, and how to manage the tag hierarchy in the Developer Portal. You can use tags to classify your Developer Portal content.
- [Posting a poll](#)  
You can post a poll in the Developer Portal.
- [Adding images to site content](#)  
You can add .jpg, .png and .gif images to your site content in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Adding and configuring meta tags

You can customize the Developer Portal by adding and configuring meta tags.

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

Meta tags provide preview information that is displayed for a link to a website. The preview information can include images, descriptions, tags, and links. Meta tags are used when you link to external website, for example Facebook, Twitter, and Slack.

You can see which entities have the meta tag form available on their respective edit pages by default, and can be configured, Configuration, Search and metadata, Metatags, Settings:

- CONTENT
  - API
  - APPLICATION
  - ARTICLE
  - BLOG POST
  - BOOK PAGE
  - CONSUMER ORGANIZATION
  - FAQ
  - FORUM TOPIC
  - BASIC PAGE
  - PRODUCT
- TAXONOMY TERM
  - FORUMS
  - TAGS
- USER
  - USER

---

## Procedure

1. In the administrator dashboard, click Extend, Update, then click List.
2. Enter `meta tag` in the Filter list field.
3. Select the check boxes for the Meta tags you want to enable, click Enable.

- [Disabling external search engine indexing](#)

If you do not want your Developer Portal site content to be indexed by external search engines, then you can disable the indexing.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Disabling external search engine indexing

If you do not want your Developer Portal site content to be indexed by external search engines, then you can disable the indexing.

---

## Before you begin

You must have administrator or content author access to complete this task.

---

## About this task

By disabling the external search indexing, you can increase the confidentiality of your content and restrict its exposure.

---

## Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.
2. On the administrator dashboard, click Configuration.
3. In the SEARCH AND METADATA section, click Metatag.
4. Click Edit for the GLOBAL type.
5. Expand the ADVANCED section and, in the Robots section, select Prevents search engines from indexing this page.
6. Click Save.

---

## Results

You have disabled external search engine indexing.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Adding custom pages

You can create custom pages within the Developer Portal. You can add a basic page for static content, or an article for news content.

---

## Before you begin

You must have administrator or content author access to complete this task.

## About this task

---

Use basic pages for your static content, such as an "About us" page. Typically, a basic page is used for static content that can be linked into the main navigation bar, although this is not a requirement. Use articles for time-sensitive content, like news, press releases, or blog posts.

## Procedure

---

To add custom pages, complete the following steps.

1. Log in to the Developer Portal as an administrator or content author.
2. If the administrator dashboard is not displayed, click **Manage** to display it.
3. In the administrator dashboard, click **Content**.
4. Click **+Add content**, then click either **Basic page** or **Article**, depending on the type of content you want to display.
5. Enter a page title, select the language, and enter the content.
6. Specify the remaining page options as required.
  - If you want your new page to be linked to from a menu, you must complete the Menu settings section.
7. Optional: Click **Edit summary** and specify a summary page description.
8. Click **Save** to publish the new page immediately. If you don't want to publish the new page immediately, ensure that you deselect **Published** before saving.

## Results

---

You added a new custom page to the Developer Portal. You can edit the page after it is created by clicking **Edit** for the custom page.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Integrating Twitter data into the social block

You can retrieve and integrate data from a Twitter account of interest and display it into a social block in a Developer Portal site.

### Before you begin

---

You must have administrator access to complete this task.

You must have a Twitter App for the Twitter account of interest. The Twitter App contains information that is used to configure the social block. For information on creating Twitter Apps, see <https://apps.twitter.com/>.

## Procedure

---

1. If the administrator dashboard is not displayed, click **Manage** to display it.
2. On the administrator dashboard, click **Configuration**.
3. In the **WEB SERVICES** section, click **IBM Social Block settings**.
4. Using the information from your Twitter App, enter the Consumer Key, Consumer Secret, Access Token, and Token Secret in the corresponding fields.
5. Click **Save configuration**.

Twitter data from a Twitter account of interest has been integrated with the Developer Portal, and is displayed on the social block of the site.

- **Editing the social block**

After you have integrated Twitter data into the Developer Portal social block, you can edit the content, appearance, and functionality of the social block.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Editing the social block

After you have integrated Twitter data into the Developer Portal social block, you can edit the content, appearance, and functionality of the social block.

### Before you begin

---

You must have administrator access to complete this task.

You must have Twitter data integrated into the Developer Portal social block. For more information, see [Integrating Twitter data into the social block](#).

## Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. On the administrator dashboard, click Structure > Pages.
3. Click Edit next to the Welcome page (or next to the page that contains the social block that you want to edit).
4. From the Variants navigation tree, select Panels > Content, and click Edit next to the Social Block. The Edit block window is displayed.
5. Edit the social block by configuring any of the following options:

Title

Update the title as required.

Number of tiles to display

Configure the number of tiles that you want to display on the social block by entering a number in the Number of tiles to display field. The default number of tiles that are displayed on the social block is 9, and there is a limit of 100 tiles.

FORUM

Use the check boxes to specify the forum topics that you want to display.

Get tweets from

From the Get tweets from drop-down list, select whether you want to display Twitter data from users or a search term.

Twitter search parameter

Enter the Twitter search parameter.

Types of tweets to display

Select the types of tweets that you want to display from the drop-down list. You can select to display tweets, or tweets and replies.

6. After you have configured the social block, click Update block. Your social block is configured, and the configurations are implemented when you return to the home page.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Adding content in multiple languages

You can create content in multiple languages in the Developer Portal.

---

### Before you begin

You must have administrator or content author access to complete this task.

---

### About this task

You can provide custom pages in multiple languages to your APIs and Products to improve your customer experience and understanding. By default, multiple languages are enabled in the Developer Portal.

Note: In API Manager, translations for APIs and products must be done within a document. For more information, see [Using x-ibm-languages to create multilingual API and Product documentation](#).

---

### Procedure

1. Log in to the Developer Portal as an administrator or content author.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. On the administrator dashboard, click Content.
4. If you are creating a new page to be translated, click +Add content.
  - a. Click Basic page, then select type, for example **Basic page**.
  - b. Enter a title for your custom page in the Title field.
  - c. Enter your information in the Body field.
  - d. Click Save.
  - e. Click Translate.
  - f. Click Add for the language you want to translate.
  - g. Provide the language content.
  - h. Click Save (this translation).
5. If you are translating an existing page, find the page that you want to update in the list.
  - a. Click Translate from the drop-down list for the page.
  - b. Click Add for the language you want to translate.
  - c. Provide the language content.
  - d. Click Save (this translation).

---

### Results

You successfully created a translated version of your content.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Adding custom pages to APIs and Products

After you create a custom page in the Developer Portal, you can add a link to the new page to any APIs and Products that exist in the Developer Portal.

### Before you begin

---

You must have administrator or content author access to complete this task.

You must have an API or Product to add the custom page to.

### About this task

---

You can add custom pages to your APIs and Products to provide further information on their use and value.

For example, you can create a custom documentation page on the implementation of an API in a specific circumstance, and add this custom documentation page to the API.

### Procedure

---

1. Log in to the Developer Portal as an administrator or content author.
2. If the administrator dashboard is not displayed, click **Manage** to display it.
3. On the administrator dashboard, click **Content**, then click **+Add content**.
4. Click **Basic page**.  
The **Create Basic page** window is displayed.
5. Enter a title for your custom page in the **Title** field.
6. Enter your information of interest in the **Body** field.
7. If you want to add the custom page to a specific Product, enter the Product name in the **Link to one or more specific Products** field. As you type into this field, a list of available Products is displayed for you to select. You can add more Products by clicking **Add another item**. If you want to add the custom page to all Products, select the **Link to all Products** check box.
8. If you want to add the custom page to a specific API, select the **APIs** tab, and then enter the API name in the **Link to one or more specific APIs** field. As you type into this field, a list of available APIs is displayed for you to select. You can add more APIs by clicking **Add another item**. If you want to add the custom page to all APIs, select the **Link to all APIs** check box.
9. Optional: Configure the additional settings of the custom page to your specification.
10. Click **Save**.

### Results

---

Your custom page is created and linked to the APIs or Products that you have specified. You can edit the page after it is created, and update the APIs and Products that it is linked to, by clicking **Edit** for the custom page.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Adding new frequently asked questions

You can add new FAQs to the Developer Portal.

### Before you begin

---

You must have administrator or content author access to complete this task.

### About this task

---

To add new FAQs, you create a new FAQ node and add questions and answers to that node. Each FAQ node represents an FAQ topic, and each topic can contain multiple questions and answers.

### Procedure

---

To add new FAQs, complete the following steps:

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click **Manage** to display it.
3. Click **Content** in the administrator dashboard.
4. Click **+Add content**.
5. Click **FAQ**.  
The **Create FAQ** page displays.
6. Provide a **Title** for the new FAQ topic.
7. Enter the question in the **Question** field, and enter the answer in the **Answer** field.
8. Optional: If you have more content for this FAQ topic, click **Add another item** and complete the **Question** and **Answer** fields. Repeat this step as required.

- Click Save to save your new FAQ topic.  
Your new FAQ topic is displayed in the Support section of the Developer Portal.

---

## Results

You successfully added new FAQs to the Developer Portal.

---

## What to do next

You can edit the current content of FAQs by clicking Content in the administrator dashboard, finding the FAQ content that you want to edit, and clicking Edit against that FAQ.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.  
For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Applying an image to an API or Product

You can apply an image to an API or a Product in the Developer Portal.

---

## Before you begin

You must have administrator or content author access to complete this task.

---

## Procedure

To add an image to an API or Product, complete the following steps:

- If the administrator dashboard is not displayed, click Manage to display it.
- Click Content in the administrator dashboard.
- Click Edit next to the API or Product that you want to edit.
- Under the Image heading, click Choose File to select an image.
- Click Save and keep published, to publish the updated content, or select Save and unpublish if you want to publish the updated content later.  
You have added a new picture to the selected API or Product.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.  
For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Attaching a documentation file to APIs

You can attach a file to APIs in the Developer Portal, and display them as documentation attachments. You can attach multiple files to APIs.

---

## Before you begin

You must have administrator or content author access to complete this task.

---

## About this task

You can attach only one file at a time. The default file upload size limit applies to the files that you want to attach, and you can attach up to 10 files to an API by default.

Note: You can change the default limit for the number of files that you want to attach.

An administrator can configure the types of file that are uploaded, and the number of files that a user can upload.

The following file types can be uploaded:

- txt doc pdf
- xls ppt pptx
- docx xlsx rtf
- odt ods odp md json
- yaml tgz tar zip

---

## Procedure

- If the administrator dashboard is not displayed, click Manage to display it.
- Click Content in the administrator dashboard.
- Click Edit next to the API you want to attach the file to.
- In the Documentation section, click Browse and identify the file that you want to upload, then click Open.
- Click Upload, then click Save.

6. Optional: Clear the Display checkbox for the file if you want to upload and attach the file to the API, but not show it in the Developer Portal.
7. Optional: Enter a description for your file in the Description field. This description can be used as the label of the link to the file.
8. Optional: If you uploaded multiple files, you can use the drag handle next to the file name to rearrange them.

---

## Results

---

You successfully attached a documentation file to your API.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Configuring blogs

You can post new blog entries in the Developer Portal, and configure them to suit your requirements. You can also turn blogs off.

---

### Before you begin

---

You must have administrator or content author access to complete this task.

---

### Procedure

---

To post a new blog entry, complete the following steps:

- If the administrator dashboard is not displayed, click Manage to display it.
- Click Content in the administrator dashboard.
- Click Add content.
- Click Blog post.
- Fill in the Title and Body fields.
- Click Save and keep published, to publish the updated content, or select Save and unpublish if you want to publish the updated content later. You have posted a new blog entry.

To configure a blog post, complete the following steps:

- If the administrator dashboard is not displayed, click Manage to display it.
- Click Content in the administrator dashboard.
- Click Edit next to the blog post that you want to configure.
- You can configure the selected blog from this view.
- Click Save and keep published, to publish the updated content, or select Save and unpublish if you want to publish the updated content later. You have configured the selected blog post.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Configuring the taxonomy menu block

To display your tag hierarchy in the Developer Portal, you must configure the taxonomy menu block.

---

### Before you begin

---

You must have administrator or content author access to complete this task.

---

### About this task

---

Along with controlling how your tag hierarchy is displayed through configuring your taxonomy menu block, you can configure options for the taxonomy tree. The following options can be configured for your taxonomy menu block:

- Vocabulary
- Parent option
- Depth
- Node options and content
- Region settings
- Visibility settings

Important: The taxonomy block will appear after configuration only if there are tags for it to display.

---

### Procedure

---

1. In the Administrator dashboard, click Structure > Blocks.
2. Click configure for the Taxonomy Menu Block (Tags) block.
3. Configure the options that are available for your taxonomy menu block.
4. When you have configured your taxonomy menu block, click Save block.  
You have configured your taxonomy menu block, and your tag hierarchy is displayed based on your configurations.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Customizing the URL alias for a specific API or Product page

You can customize the URL of an API or Product page from the default alias that they are assigned.

### Before you begin

---

You must have administrator or content author access to complete this task.

### About this task

---

Creating a custom URL alias is useful if you want to make the URL relevant to the API or Product page.

### Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. On the administrator dashboard, click Content.
3. Identify the API or Product page that you want to customize the URL alias for, and click Edit.
4. Expand URL path settings.
5. In the URL alias text field, enter the custom URL alias that you want to assign your API or Product page.  
Note: URL aliases must all be unique.
6. Click Save and keep published, to publish the updated content, or select Save and unpublish if you want to publish the updated content later.

### Results

---

You have applied a custom URL alias for your specified API or Product page, and it is displayed in the URL of your browser when the API or Product page is selected.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Embedding multimedia in site content

You can embed multimedia elements in site content in the Developer Portal.

### Before you begin

---

You must have administrator or content author access to complete this task.

### Procedure

---

To embed multimedia in site content, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Content in the administrator dashboard.
3. Under the TITLE heading, click the title of the required content.
4. Click the Edit tab.
5. Use the Insert Media Embed icon  in the WYSIWYG editor to embed multimedia in the content.  
Note: The Insert Media Embed icon is available only if you have selected Full HTML mode.
6. Click Save and keep published to publish the new page immediately, or select Save and unpublish if you want to publish the page later.  
You have embedded multimedia in the selected site content.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Linking from one piece of site content to another

You can link from one piece of site content to another in the Developer Portal.

### Before you begin

---

You must have administrator or content author access to complete this task.

### Procedure

---

To link from one piece of site content to another, complete the following steps:

1. Click Content in the administrator dashboard.
2. Under the TITLE heading, click the title of the required content.
3. Select the Edit tab.

4. Use the Link to content icon in the WYSIWYG editor.
5. Click Save.  
You have linked the selected site content to another site content element.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Linking to social media sites

You can link to social media sites from the Developer Portal. You can configure where and how these links are displayed and which sites you want to link to.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

1. Click Structure in the administrator dashboard.
2. Click Blocks.
3. Under the Disabled heading, locate the Follow site block.
4. Select the location for your social media block from the drop-down list for Follow Site in the REGION column.  
The Follow Site block will appear under the heading that corresponds to the region you selected in the REGION drop-down list.
5. Required: Click Save blocks before you begin configuring your new block.
6. Click configure for the Follow Site block.
7. In the Block title field, type the name of your block.
8. Under the Default block title heading, select one of the following leading text options for your block using the radio buttons for each option:
  - "Follow *your.portal.site* on"
  - "Follow me on"
  - "Follow us on"
9. Use the User pages check box to decide whether you want your block to display on your user's profile pages.
10. Use the Alignment and Icon Style drop-down lists to adjust the appearance of your block.
11. Click Save block.
12. Click Configuration in the administrator dashboard.
13. Under the WEB SERVICES heading, click Follow.
14. Type the URL under the URL heading for each of the social media sites you want your users to access. The following is an example of a link to the @ibmapiconnect twitter handle:  
  
`https://twitter.com/ibmapiconnect`
15. Click Submit.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Managing tags in the Developer Portal

These instructions show you how to add new tags to your taxonomy, and how to manage the tag hierarchy in the Developer Portal. You can use tags to classify your Developer Portal content.

## Before you begin

---

You must have administrator or content author access to complete this task.

## Procedure

---

To manage your tags, complete the following steps

1. If the administrator dashboard is not displayed, click Manage to display it.
  2. Click [Structure > Taxonomy > Tags](#) in the administrator dashboard.  
The List window for Tags is displayed.
  3. You can add new terms, delete, and reorganize terms from this view.
    - a. To add a new term, click Add term, define the new term, then click Save.
    - b. To delete a term, select Delete from the OPERATIONS menu next to the term that you want to delete. Then click Delete to confirm.
    - c. To reorganize terms, ensure that the row weights are hidden by clicking Hide row weights if necessary, then use the drag-and-drop handles to manage the tag hierarchy. Terms can be dragged to organize a parent grouping hierarchy. Then click Save.
- [Tagging APIs based on their lifecycle phase](#)  
In the Developer Portal, you can have APIs automatically tagged with their lifecycle phase; realized, identified, or specified.

## Related tasks

---

- [Editing tags for a specific item](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Tagging APIs based on their lifecycle phase

In the Developer Portal, you can have APIs automatically tagged with their lifecycle phase; realized, identified, or specified.

## Before you begin

---

You must have administrator or content author access to complete this task.

## About this task

---

APIs are tagged in the API Manager with a lifecycle phase as follows:

- Realized (default) - The API is in the implementation phase.
- Identified - The API is in the early conceptual phase and is neither fully designed nor implemented.
- Specified - The API has been fully designed and passed an internal milestone, but has not yet been implemented.

You can configure the Developer Portal to tag APIs with their lifecycle phase automatically.

## Procedure

---

Tagging APIs with their phase is disabled by default. To enable the function:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. On the administrator dashboard, click Configuration.
3. In the SYSTEM section, click IBM API Connect.
4. Select Automatically tag APIs with their phase, and then click Save configuration.

## What to do next

---

You can manage the tag hierarchy of your APIs. For more information, see [Managing tags in the Developer Portal](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Posting a poll

You can post a poll in the Developer Portal.

## Before you begin

---

You must have administrator or content author access to complete this task.

## Procedure

---

To post a poll, complete the following steps:

1. Click Content in the administrator dashboard.
2. Click Add content.
3. Click Poll.
4. Enter the poll question in the Poll question field.
5. Under the Choice heading, add answers to the available fields as choices.
6. From the Poll duration drop-down menu, select a time limit for the poll.
7. Click Save.

You have posted a poll.

## What to do next

---

See [Editing sample content](#) to learn how to add a links to your poll to sample content.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Adding images to site content

You can add .jpg, .png and .gif images to your site content in the Developer Portal.

## Before you begin

---

You must have administrator or content author access to complete this task.

## Procedure

---

To upload images for use in site content, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Content in the administrator dashboard.
3. Under the TITLE heading, click the title of the required content.
4. Click the EDIT tab.

5. Use the Image icon in the WYSIWYG editor to add an image.
6. Click Save and keep published to publish the new page immediately, or select Save and unpublish if you want to publish the page later.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Configuring and restricting content in the Developer Portal

You can configure and restrict certain content elements in the Developer Portal.

To learn how to configure and restrict content in the Developer Portal, use the following topic links:

- [Creating content types](#)  
Content types define default fields for editors to add content on your Developer Portal site and are the building blocks for authoring content. You can control which content types are available
- [Configuring documentation upload limitations](#)  
You can attach documentation to an API by uploading it in the Developer Portal. You can configure the API content type to place limitations on the uploaded documentation.
- [Configuring image upload limitations](#)  
You can attach an image file to an API by uploading it in the Developer Portal. You can configure the API content type to place limitations on the uploaded image files.
- [Configuring the appearance of ratings in the Developer Portal](#)  
You can configure the appearance of ratings in the Developer Portal.
- [Customizing the privacy policy statement](#)  
You can define and customize a privacy policy statement that sets out the privacy conditions of your Developer Portal site. The privacy policy can be linked to from the cookie compliance banner.
- [Customizing the terms of use statement](#)  
You can define and customize a terms of use statement that sets out the terms and conditions that your users must accept to use your Developer Portal site.

- [Editing a site comment](#)  
You can edit site comments in the Developer Portal.
- [Editing sample content](#)  
You can edit sample content, such as basic pages, in the Developer Portal.
- [Editing tags for a specific item](#)  
You can edit tags for a specific item in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Creating content types

Content types define default fields for editors to add content on your Developer Portal site and are the building blocks for authoring content. You can control which content types are available

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

After you create your content type, it is added to the following list of default content types that are present in the Developer Portal:

- API
- Application
- Article
- Basic page
- Blog post
- Book page
- Consumer organization
- Forum topic
- Product

The content type that you create, and the default content types, can be edited and configured further to your specifications.

### Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure in the administrator dashboard.
3. Click Content types.
4. Click +Add content type.
5. Enter a name for your content type in the Name field.
6. Optional: Enter the text that you want to appear on the Add new content page, in the Description field.
7. Enter a title field label for your content type in the Title field label field.
8. Optional: Configure any of the following options for your content type:
  - Submission form settings
  - Publishing options
  - Language settings
  - Display settings
  - Menu settings
9. After you have configured your content type to your specifications, click Save and manage fields.  
You have created a new content type.

### What to do next

---

You can add fields to your new content type; see [Adding fields to content types](#).

- [Adding fields to content types](#)  
Fields can be added to content types in the Developer Portal for customization, and to add functionality.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Adding fields to content types

Fields can be added to content types in the Developer Portal for customization, and to add functionality.

## Before you begin

---

You must have administrator access to complete this task.

## About this task

---

You can specify the type of data that a field can store, and the form element to edit the data with. The type of form element that is available is dependent on the type of data that your field stores.

Note: You can specify the number of values that a field can store, including an unlimited amount. You can configure the value after the field is created. Reducing the number of values that can be stored after the field is created might lead to data loss.

## Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure in the administrator dashboard.
3. Click Content types, and identify the content type that you want to add a field to.
4. Click Manage fields for the content type, then click Add field.
5. Select a field type or select an existing field to reuse, then enter a label for your field in the Label field.  
The label that you specify for your field is displayed in the UI.
6. Optional: If you want to edit the machine name that is automatically created based on your label, click Edit and enter the new name.  
You cannot change the machine name after the field is created.
7. Click Save and continue.
8. Modify the field type specific settings as required, then click Save field settings.  
You have added a field to your content type.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Configuring documentation upload limitations

You can attach documentation to an API by uploading it in the Developer Portal. You can configure the API content type to place limitations on the uploaded documentation.

## Before you begin

---

You must have administrator access to complete this task.

## About this task

---

The set of configurable limitations that you can place on uploading documentation is different to the set of limitations that you can place on uploading images.

The file size limit that is applied when you upload documentation is also different to the limit that is applied when you upload images.

## Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure in the administrator dashboard.
3. Click Content types.
4. For the API content type, click Manage fields.
5. For the Documentation field, click Edit.
6. Configure the type of files that are allowed to be uploaded in the Allowed file extensions field.
7. Enter the file size upload limit in the Maximum upload size field.  
The default size is 10MB, while the maximum upload size possible is 64MB.
8. Click Save settings.  
You have configured the documentation upload limitations.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Configuring image upload limitations

You can attach an image file to an API by uploading it in the Developer Portal. You can configure the API content type to place limitations on the uploaded image files.

## Before you begin

---

You must have administrator access to complete this task.

## Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure in the administrator dashboard.
3. Click Content types.
4. For the API content type, click Manage fields.
5. For the Image field, click Edit.
6. Configure the type of image files that are allowed to be uploaded in the Allowed file extensions field.
7. Specify the maximum and minimum allowed image sizes in the Maximum image resolution and Minimum image resolution fields.
8. Enter the file size upload limit in the Maximum upload size field.  
The default size is 2MB, while the maximum upload size possible is 64MB.
9. Click Save settings.  
You have configured the image upload limitations.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Configuring the appearance of ratings in the Developer Portal

You can configure the appearance of ratings in the Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

You can configure the appearance of ratings for only the following content types in the Developer Portal:

- APIs
- Applications
- Products

Note: The Applications and Products content types rating functionality is set to hidden by default.

## Procedure

---

These following steps describe how to customize the rating on a selected API, Application, or Product. To ensure that the configured rating is also displayed in the list view of APIs, Applications, or Products, then you must repeat these steps on the Teaser tab in the Manage Display window:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure in the administrator dashboard.
3. Click Content types.
4. Select Manage display from the list in OPERATIONS column, next to the required content type.

5. Click the Settings icon , then select the style you require, then click Update.

### Format settings: Voting api formatter

#### Styles

Bootstrap stars ▼

Readonly

Show results

Show own vote

Show own cast vote instead of results. (Useful on add/ edit forms with rate widget).

**Update** **Cancel**

6. Click Save. You have configured the appearance of the ratings feature for the required content type.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Customizing the privacy policy statement

You can define and customize a privacy policy statement that sets out the privacy conditions of your Developer Portal site. The privacy policy can be linked to from the cookie compliance banner.

### Before you begin

You must have administrator access to complete this task.

### Procedure

To define or customize a privacy policy, complete the following steps:

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. Click Content, then enter `privacy` into the title search filter, and click Filter.  
The Privacy Policy content item is displayed in the list of content.
4. Click Edit next to the Privacy Policy content item.
5. Update the content as required. For example, you can complete the following tasks:
  - a. Edit the text of the privacy policy statement.
  - b. Set the display settings.
  - c. Link the content to Products and APIs.
  - d. Enter an explanation of the changes that have been made to the privacy policy since the last version.
6. Click Save to save your changes.

### Results

The privacy policy statement is successfully updated.

### What to do next

You can set your cookie compliance banner to link to your updated privacy policy. For more information, see [Enabling a cookie compliance banner](#).

### Related tasks

- [Enabling a cookie compliance banner](#)
- [Customizing the terms of use statement](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Customizing the terms of use statement

You can define and customize a terms of use statement that sets out the terms and conditions that your users must accept to use your Developer Portal site.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

To define or customize a terms of use statement, complete the following steps:

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. Click Content, then enter `terms` into the title search filter, and click Filter.  
The Terms of use content item is displayed in the list of content.
4. Click Edit next to the Terms of use content item.
5. Update the content as required. For example, you can complete the following tasks:
  - a. Edit the text of the terms of use statement.
  - b. Set the display settings.
  - c. Link the content to Products and APIs.
  - d. Enter an explanation of the changes that have been made to the terms of use since the last version.
6. Click Save to save your changes.

### Results

---

The terms of use statement is successfully updated.

### What to do next

---

You can force new users to accept the terms and conditions on the Developer Portal. For more information, see [Forcing new users to accept terms and conditions](#).

### Related tasks

---

- [Enabling a cookie compliance banner](#)
- [Customizing the privacy policy statement](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Editing a site comment

You can edit site comments in the Developer Portal.

### Before you begin

---

You must have administrator or content author access to complete this task.

### Procedure

---

To edit a site comment, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Content in the administrator dashboard.
3. Click the Comments tab.
4. In the OPERATIONS column, click Edit alongside the comment that you want to edit.
5. Edit the content of the comment as required.
6. Click Save.  
You have edited the selected comment.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Editing sample content

You can edit sample content, such as basic pages, in the Developer Portal.

### Before you begin

---

You must have administrator or content author access to complete this task.

### Procedure

---

To edit sample content, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Content in the administrator dashboard.
3. In the OPERATIONS column, click Edit alongside the content item that you want to edit.
4. Edit the sample content of the selected element as required.
5. Click Save and keep published, to publish the updated content, or select Save and unpublish if you want to publish the updated content later.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Editing tags for a specific item

You can edit tags for a specific item in the Developer Portal.

### Before you begin

---

You must have administrator or content author access to complete this task.

You must have some tags that are available to apply to your content; see [Managing tags in the Developer Portal](#).

### Procedure

---

To edit tags for a specific item, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Content in the administrator dashboard.
3. In the list of content items, click Edit alongside the content item that you want to update.
4. In the Tags section, select the required tag.
5. To add another tag, click Add another item, then select the required tag.
6. If you want to publish the updated content, ensure the Published check box is selected. Deselect the check box if you want to publish the updated content later.
7. Click Save.

### Related tasks

## Deleting a site comment

You can delete site comments in the Developer Portal.

### Before you begin

---

You must have administrator or content author access to complete this task.

### Procedure

---

To delete a site comment, complete the following steps

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Content in the administrator dashboard.
3. Click the Comments tab.
4. From the UPDATE OPTIONS list, select Delete the selected comments.
5. Select the comments that you want to delete, then click Update.  
The confirmation screen displays.
6. Click Delete comments.  
You have deleted the selected comments.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Deleting blocks

You can delete blocks in the Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure in the administrator dashboard.
3. Click Pages.
4. In the OPERATIONS column, find the welcome page row and select Edit from the drop-down list.
5. Expand Panels, then click Content.
6. In the OPERATIONS column, find the block that you want to delete and select Delete for the drop-down list.
7. Click Delete to confirm, then click Update and save.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Disabling blogs

You can disable blogs on your Developer Portal.

## Before you begin

You must have administrator access to complete this task.

Before any changes are made, **B**logs show as an option on the front page like this:

## Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure > Menus from the administrator dashboard.
3. In the OPERATIONS column, click Edit menu for **Main navigation**.
4. Clear Enabled for the **Blogs Menu link**, then click Save.

### Title \*

Main navigation Machine name: main

### Administrative summary

Site section links

### Menu language

English ▼

MENU LINK	ENABLED	OPERATIONS
⊕ Home	<input checked="" type="checkbox"/>	Edit ▼
⊕ API Products	<input checked="" type="checkbox"/>	Edit ▼
⊕ Apps	<input checked="" type="checkbox"/>	Edit ▼
⊕ Blogs	<input type="checkbox"/>	Edit
⊕ Forums	<input checked="" type="checkbox"/>	Edit ▼
⊕ Support	<input checked="" type="checkbox"/>	Edit

Save

## Results

You removed the **B**logs option from the front page. The options on the front page of your Developer Portal now look like this:

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Deleting forums from the front page

You can delete the help information on forums from the front page of your Developer Portal.

## Before you begin

You must have administrator access to complete this task.

Before any changes are made, the front page help bar looks like this:

## Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure in the administrator dashboard.
3. Click Block layout > Custom block library.
4. In Block description, enter `Get help`, then click Apply.

Block description	Block type
<input type="text" value="Get help"/>	<input type="text" value="- Any -"/>
<input type="button" value="Apply"/>	

BLOCK DESCRIPTION	BLOCK TYPE	UPDATED	OPERATIONS
<a href="#">Get Help [en]</a>	Basic block	05/07/2020 - 19:52	<input type="button" value="Edit"/>

5. In the OPERATIONS column, click Edit for `Get Help`.
6. In the **Body** section, delete the forum information, then click Save.

## Results

You removed the forum information from the front page of your Developer Portal and the front page now looks like this:

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Turning comments for specific content types on or off in the Developer Portal

You can turn the comments for specific content types on or off in the Developer Portal.

## Before you begin

You must have administrator access to complete this task.

## Procedure

To turn comments for specific content types on or off in the Developer Portal, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure in the administrator dashboard.
3. Click Content types.
4. In the OPERATIONS column, click Manage fields for the required content type.
5. In the OPERATIONS column, click Edit for the Comments field.

Note:

- If there is no Comments field, you can enable commenting for the selected content type by adding one as follows:
  - Click Add field.
  - From the Add a new field list, select Comments.
  - Enter a field label, then click Save and continue.

- Select the required comment type, then click Save field settings.
  - You can completely disable commenting for the selected content type, and permanently remove all current comments, by selecting Delete.
6. Select the required option in the DEFAULT VALUE section.
    - a. To allow commenting, select Open.
    - b. To keep existing comments but disallow further commenting, select Closed.
    - c. To hide all comments, select Hidden.
  7. When done, click Save settings.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Turning comments off for an individual item

You can turn off comments for individual items within a content type.

### Before you begin

---

Users with edit permission for the selected content type can perform this task.

### Procedure

---

To turn off comments for a single item, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Content in the administrator dashboard.
3. In the OPERATIONS column, click Edit for the required content item.
4. Click Comment settings in the side pane.
5. Select Closed to turn comments off for the selected item.
6. Click Save.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Turning off ratings for specific content types in the Developer Portal

You can turn off ratings for specific content types in the Developer Portal by hiding the ratings field.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

To turn off ratings for specific content types in the Developer Portal, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure in the administrator dashboard.
3. Click Content types.
4. In the OPERATIONS column for the required content type, select Manage fields from the drop-down list.
5. Click on the Manage form display tab. In the FIELD list, select Rating and drag and drop it into the Disabled section, then click Save.
6. Click on the Manage display tab. Content items are displayed by using different view modes, such as Default, Card, and Teaser, and these modes are shown at the beginning of the Manage display page. For each view mode that is applicable to the content type you're editing, click the mode, and in the FIELD list select Rating, and drag and drop it into the Disabled section.
7. Click Save.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Turning the ability to tag specific content types off in the Developer Portal

You can turn the ability to tag specific content types on or off in the Developer Portal.

## Before you begin

---

You must have administrator access to complete this task.

## Procedure

---

To turn the ability to tag specific content types on or off in the Developer Portal, complete the following steps:

1. Click Structure in the administrator dashboard.
2. Click Content types.
3. Click Manage fields next to the required content type.
4. From the Tags field, click Edit.
5. Click Delete, then confirm the Delete as the action cannot be undone.  
You have turned the ability to tag specific content types off.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Structure

---

Control the layout of the Developer Portal, such as configuring the front page, adding and changing blocks, and displaying Products and APIs in categories.

To learn how to control the layout of the content on your Developer Portal site, use the following topic links.

- [Configuring the front page](#)  
You can configure the Developer Portal front page.
- [Adding a menu](#)  
You can add a menu to the Developer Portal, and define the items that are included in the menu.
- [Adding and changing the blocks displayed on Developer Portal pages](#)  
You can add new blocks, and modify the existing blocks that are displayed on Developer Portal pages.
- [Changing the front page banner block](#)  
You can change the front page banner content and image that is displayed on the home page when a user first logs in to the Developer Portal.
- [Changing the front page Featured Content block](#)  
You can display featured Products or APIs on the front page of your Developer Portal by configuring the Featured Content block.
- [Changing the items in the main menu](#)  
You can change the items in the main menu that is displayed on all pages in the Developer Portal.
- [Changing the ratings display](#)  
You can change the appearance of the content ratings in the Developer Portal.
- [Displaying APIs and Products in categories](#)  
You can create taxonomies in the Developer Portal, which dictate the categorization of APIs and Products, and how they are displayed. The taxonomies that you define can be used by API developers to categorize APIs and Products in YAML files.
- [Implementing an image carousel](#)  
You can customize your Developer Portal home page to display images in a carousel. The image carousel provides your Developer Portal home page with a continuous slide show that is customized to your specifications.
- [Making your application's image public](#)  
You might want to display your application's image in an oauth authentication page to reassure customers that they are authenticating the correct application in the Developer Portal. That authentication uses a URL to the image that is stored on the Developer Portal. However, by default, those images are private unless you are logged in, which doesn't work if you want to display it in an oauth page. The solution is for the admin to change the `application_image` field to use public instead of private.
- [Providing navigation by tag hierarchy](#)  
You can provide the ability for users in the Developer Portal to navigate by using tag hierarchy.
- [Using the Views module in the Developer Portal](#)  
By using the Views module, you can fetch content from your Developer Portal site, and present it to users in different formats such as lists, graphs, and tables.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Configuring the front page

You can configure the Developer Portal front page.

## Before you begin

---

You must have administrator access to complete this task.

## About this task

---

Create a customized welcome page for your users. Note that blocks that are placed on the front page of the Developer Portal are visible to all users, regardless of whether the blocks have access restrictions placed on them. The visibility of blocks to all users also extends to the Featured Content block.

## Procedure

---

To configure the front page, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure, then click Pages.
3. Alongside the welcome entry, click Edit.
4. Use the options provided to configure the front page.  
Here you can edit the page information, access, and configuration of the welcome page.
5. Click Update and save to save your changes.

## What to do next

---

You can create a custom page. For more information, see [Creating custom pages](#).

- [Disabling blogs](#)  
You can disable blogs on your Developer Portal.
- [Deleting forums from the front page](#)  
You can delete the help information on forums from the front page of your Developer Portal.

## Related tasks

---

- [Changing the front page banner block](#)
- [Changing the front page Featured Content block](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Disabling blogs

You can disable blogs on your Developer Portal.

## Before you begin

---

You must have administrator access to complete this task.

Before any changes are made, **Blogs** show as an option on the front page like this:

## Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure, then click Menus from the administrator dashboard.
3. In the OPERATIONS column, click Edit menu for **Main navigation**.
4. Clear Enabled for the **Blogs Menu link**, then click Save.

### Title \*

Machine name: main

### Administrative summary

### Menu language

MENU LINK	ENABLED	OPERATIONS
Home	<input checked="" type="checkbox"/>	Edit
API Products	<input checked="" type="checkbox"/>	Edit
Apps	<input checked="" type="checkbox"/>	Edit
Blogs	<input type="checkbox"/>	Edit
Forums	<input checked="" type="checkbox"/>	Edit
Support	<input checked="" type="checkbox"/>	Edit

Save

## Results

You removed the **Blogs** option from the front page. The options on the front page of your Developer Portal now look like this:

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Deleting forums from the front page

You can delete the help information on forums from the front page of your Developer Portal.

### Before you begin

You must have administrator access to complete this task.

Before any changes are made, the front page help bar looks like this:

## Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure in the administrator dashboard.

3. Click Block layout > Custom block library.
4. In Block description, enter `Get help`, then click Apply.

Block description	Block type
<input type="text" value="Get help"/>	- Any -
<input type="button" value="Apply"/>	

BLOCK DESCRIPTION	BLOCK TYPE	UPDATED	OPERATIONS
<a href="#">Get Help [en]</a>	Basic block	05/07/2020 - 19:52	<input type="button" value="Edit"/>

5. In the OPERATIONS column, click Edit for `Get Help`.
6. In the **Body** section, delete the forum information, then click Save.

## Results

You removed the forum information from the front page of your Developer Portal and the front page now looks like this:

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Adding a menu

You can add a menu to the Developer Portal, and define the items that are included in the menu.

## Before you begin

You must have administrator access to complete this task.

## Procedure

To add a menu, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure > Menus.
3. Click Add menu, provide a title, and an optional summary and menu language, and click Save.
4. To add items to your menu, click Add link, and configure the menu link details that you require.
5. Click Save to save your changes.  
A new block for your menu is created automatically, and your menu is now in the **Menus** list.

## What to do next

You can use block configuration options to control which pages your menu is displayed on, and where it is positioned. You can use your menu with, or instead of, other menus available within the site. For more information, see [Changing the blocks displayed on Developer Portal pages](#).

You can also update an existing menu, or change your menu. For more information, see [Changing the items in the main menu](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Adding and changing the blocks displayed on Developer Portal pages

You can add new blocks, and modify the existing blocks that are displayed on Developer Portal pages.

## Before you begin

You must have administrator access to complete this task.

## About this task

Blocks are boxes of content that are rendered into an area, or region, of a page. The content can be custom HTML, Github Markdown, or plain text, and you can specify the appearance, size, position, and also configure which pages a block appears on by editing its visibility settings. You can also modify an existing block to change its appearance, size, position, and visibility.

- [Add a new block](#)
- [Edit the content of an existing block](#)
- [Modify the layout or visibility of an existing block](#)

## Procedure

To add a new basic block, complete the following steps.

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure, then click Block layout.  
All of the blocks that are in the system are displayed by theme. From the Block layout page you can assign blocks to a region, and control the order of the blocks within the region. Blocks are positioned on a per-theme basis, so if you enable more than one theme on your site, you can place blocks differently for each theme.
3. Click Place block > Add custom block.  
The Add custom block page is displayed.
4. Complete the Block description field.
5. Enter the content that you require for your block into the Body section.  
You can set the text format to Full HTML, Basic HTML, Restricted HTML, or Github Markdown. You can use the edit icons in the Body section to configure your

content. Click the Source icon  to enter code source, such as HTML.

**Block description \***

A brief description of your block.

**Body**

body p

Text format **Full HTML**

[About text formats](#)

6. Click Save.  
The new custom block is saved and the Configure block page is displayed.
7. Complete the block Title field.
8. In the Visibility section, specify how you want the block to be displayed.  
You can specify the content types, configure the language settings, restrict the block to show only on pages that display specific content types, set which pages the block is displayed on, and restrict which user roles the block is visible to.

**Visibility**

<b>Content type</b>	<b>When the user has the following roles</b> <ul style="list-style-type: none"><li><input type="checkbox"/> Anonymous user</li><li><input type="checkbox"/> Superuser</li><li><input type="checkbox"/> Authenticated user</li><li><input type="checkbox"/> Forum Moderator</li><li><input type="checkbox"/> Content Author</li><li><input type="checkbox"/> Administrator</li></ul>
<b>Language</b> Not restricted	
<b>Content types</b> Not restricted	
<b>Pages</b> Not restricted	
<b>Roles</b> Not restricted	

9. In the Region section, select the region where the block should be displayed.
10. Click Save block.

The new custom block is added to your Developer Portal site.

To edit the content of an existing block, from the Block layout page complete the following steps.

11. Click the Custom block library tab (or select Structure > Block layout > Custom block library from the administrator dashboard).
12. Click Edit alongside the required block.
13. Change the block description and body content as required.
14. Click Save to save your changes.

To modify the layout or visibility settings of an existing block, from the Block layout page complete the following steps.

15. To change the region in which a block is positioned, select the required Region from the drop-down list next to the required block.

16. To change the vertical sort-order of a block within a region, drag the block to the required position.
17. To edit the visibility settings of an existing block, click Configure from the Operations drop-down menu next to the required block.
18. To enable or disable an existing block, select Enable or Disable from the Operations drop-down menu next to the required block.
19. Click Save blocks to save your changes.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Changing the front page banner block

You can change the front page banner content and image that is displayed on the home page when a user first logs in to the Developer Portal.

### Before you begin

---

You must have administrator or content author access to complete this task.

### About this task

---

You can change the front page banner by editing the Welcome Banner block in the custom block library.

### Procedure

---

To change the front page banner block, complete the following steps.

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure > Block layout.
3. Select the Custom block library tab.
4. Click edit against the Welcome Banner block entry.  
The Edit Basic block Welcome Banner page is displayed.
5. Edit the Body section with the content and image that you require.  
You can set the text format to Full HTML, Basic HTML, Restricted HTML, or Github Markdown. You can use the edit icons in the Body section to configure your content. Click the Source icon  to view and edit the code source, such as HTML.
6. Configure the language and translation settings as required.
7. Click Save to save your changes.

### Results

---

You successfully updated the front page banner block.

### Related tasks

---

- [Configuring the front page](#)
- [Adding and changing the blocks displayed on Developer Portal pages](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Changing the front page Featured Content block

You can display featured Products or APIs on the front page of your Developer Portal by configuring the Featured Content block.

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

You can configure the Featured Content block on the front page of your Developer Portal. By default this block displays a list of the most recently created Products, but you can configure the block to display Products or APIs, and select how the featured content is chosen.

### Procedure

---

1. Log in to the Developer Portal as an administrator.

- If the administrator dashboard is not displayed, click Manage to display it.
- Click Structure > Pages.
- Click Edit against the welcome page.  
The edit menu for the Welcome page is displayed.
- Select Panels > Content from the navigation column, and then click Edit against the Featured Content block.  
The Edit block page for the Featured Content block is displayed.

Edit block
✕

Configure the node selection settings for this Featured Content block. For each node the block will display its image, title and summary. If no summary is present then a truncated form of the description field will be used instead.

To modify the content shown for a node either Edit that node in the portal or edit the YAML document for that node in the API Manager.

Note that the node selection is per user, and so depending on the visibility settings, different users may see different nodes.

**Block description**  
Featured Content block

**Title \***

Display title

**Node type \***

Feature APIs or Products?

**Number of tiles to display \***

How many tiles should be shown?

**Node selection algorithm \***

Select how the featured content should be chosen. For example, based on creation or modification time, name, or random.

**Custom nodes**

Manually specify the nodes to feature. ';' separated. (This field is only used if using 'Custom' node selection.)

**Region \***

[Update block](#)

- Configure the Feature Content block as required.  
You can choose to display the title or not, select whether to use Products or APIs, for your node type. You can choose how many tiles to display, and select which algorithm is used to select the node. If you start typing in the **Custom nodes** field, you can choose from the options you are given.
- Click Update block, then Update and save, to save your changes.

## Results

You successfully configured the Featured Content block on the front page of your Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Changing the items in the main menu

You can change the items in the main menu that is displayed on all pages in the Developer Portal.

### Before you begin

You must have administrator access to complete this task.

### About this task

The following screen capture shows an example of a main menu:

However, you can add new menu items, remove items, and change the item order.

### Procedure

To change the items in the main menu, complete the following steps:

- Log in to the Developer Portal as an administrator.
- If the administrator dashboard is not displayed, click Manage to display it.
- Click Structure > Menus > Main navigation.

[+ Add link](#)

**Title \***  
 Machine name: main

**Administrative summary**

**Menu language**

MENU LINK	ENABLED	OPERATIONS
<a href="#">+ Home</a>	<input checked="" type="checkbox"/>	<a href="#">Edit</a> ▾
<a href="#">+ API Products</a>	<input checked="" type="checkbox"/>	<a href="#">Edit</a> ▾
<a href="#">+ Apps</a>	<input checked="" type="checkbox"/>	<a href="#">Edit</a> ▾
<a href="#">+ Blogs</a>	<input checked="" type="checkbox"/>	<a href="#">Edit</a>
<a href="#">+ Forums</a>	<input checked="" type="checkbox"/>	<a href="#">Edit</a> ▾
<a href="#">+ Support</a>	<input checked="" type="checkbox"/>	<a href="#">Edit</a>

[Save](#)

4. Use the options provided to change the menu items.
5. Click Save to save your changes.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Changing the ratings display

You can change the appearance of the content ratings in the Developer Portal.

### Before you begin

You must have administrator access to complete this task.

### About this task

The following screen capture shows an example of the default appearance of ratings:

You can change this display if you want to.

## Procedure

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. Click Structure, Content types.
4. Click the Manage fields drop-down against the content type you want to change, for example **Product**.
5. Click Edit on the **Rating** row. Then, select the Field settings tab.

These settings apply to the *Rating* field everywhere it is used.

Vote type \*

Normal vote ▾

Vote plugin \*

Fivestar rating ▾

Allowed number of values

Limited ▾

5

Save field settings

6. Change the style settings as required and click Save field settings.  
Here is an example of an alternative Ratings style:

The screenshot shows the top navigation bar of the Developer Portal with links for IBM API Connect, Developer Portal, API Products, Apps, Blogs, Forums, and Support. Below the navigation bar, the breadcrumb 'Products /' is visible. The main content area displays the 'Weather Service' product, version 1.0.0, with a 'good' rating represented by a blue progress bar. Below the product name, there is a 'Summary' section with the text 'Rest and SOAP APIs for a Weather Service'.

## Results

You successfully changed the ratings display for a content type in your Developer Portal.

Note: There are different view modes, and the settings would need to be changed for each view mode for each content type.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Displaying APIs and Products in categories

You can create taxonomies in the Developer Portal, which dictate the categorization of APIs and Products, and how they are displayed. The taxonomies that you define can be used by API developers to categorize APIs and Products in YAML files.

You might want to create taxonomies to control which set of APIs and products can and cannot be used in the Developer Portal.

By default, all taxonomies must be created in the Developer Portal. For more information, see [Managing tags in the Developer Portal](#).

After you create your taxonomies for your APIs and Products, API developers can assign content to those taxonomies manually in the Developer Portal, or by using categories in YAML files.

However, if you create categories for your APIs and Products in the API Manager or API Manager UI, you can have your APIs and Products that are displayed in those categories in the Developer Portal. For more information on how to create categories for your APIs and Products in the API Manager or API Manager UI, see [Organizing your APIs into categories](#) and [Organizing your Products into categories](#). For information on how to have your APIs and Products that are displayed in those categories in the Developer Portal, see [Enabling dynamic category creation](#).

You can add more Developer Portal taxonomies to the categories that are defined in the API Manager or API Manager UI.

You can also provide the ability for users in the Developer Portal to navigate by using tag hierarchy. For more information, see [Providing navigation by tag hierarchy](#).

- [Enabling dynamic category creation](#)

You can display APIs and Products in pre-defined categories in the Developer Portal. You can define the categories that the APIs and Products are displayed in, in the API Manager or API Manager UI.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Enabling dynamic category creation

You can display APIs and Products in pre-defined categories in the Developer Portal. You can define the categories that the APIs and Products are displayed in, in the API Manager or API Manager UI.

---

### Before you begin

You must have administrator access to complete this task.

Your APIs and Products must be categorized in the API Manager or API Manager UI, and they must be published. For more information, see [Organizing your APIs into categories](#) and [Organizing your Products into categories](#).

---

### About this task

By organizing your APIs and Products into categories, you can provide a hierarchical display for your APIs and Products in the Developer Portal.

**Note:** Organizing APIs and Products into a hierarchical view in the API Manager UI is different from tagging in the Developer Portal.

The categories that are defined in the API Manager or API Manager UI can be overridden by creating taxonomies in the Developer Portal. For more information, see [Displaying APIs and Products in categories](#).

---

### Procedure

1. To enable the Developer Portal to display the categories for your APIs and Products:
  - a. On the administrator dashboard, click Configuration > System > IBM API Connect.
  - b. In the Categories section, select the Create taxonomies for categories if they do not already exist check box.
  - c. Click Save configuration.
2. To enable the Developer Portal to display the change to the categories you made in step 1, you must republish your APIs and products.

---

### Results

You enabled the Developer Portal to display the categories that you defined for your APIs and Products. You can see the categories that you defined, including the number of APIs and Products that are in each category, by selecting your APIs and Products in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Implementing an image carousel

You can customize your Developer Portal home page to display images in a carousel. The image carousel provides your Developer Portal home page with a continuous slide show that is customized to your specifications.

---

### Before you begin

You must have administrator access to complete this task.

---

### About this task

By implementing an image carousel, you can replace the default welcome banner or any previously set images.

---

### Procedure

1. Create a content type of Image for your carousel.
  - a. Click Structure > Content types > Add content type.
  - b. Enter the name of your content type in the Name field.  
For example, *Slide show picture*.
  - c. Optional: Specify the description of your content type in the Description field.  
For example, *A picture to display in the slideshow*.
  - d. Click Save and manage fields for your newly created content type.
  - e. Click Add field.
  - f. Select Image for Add a new field, and enter a label for your field.

- For example, *slide image*.
- g. Click Save and continue.  
The Field settings page for your new field is displayed.
  - h. In the DEFAULT IMAGE section, click Choose file to assign the image that you want as your default image for your slide show if no other images are found.
  - i. Optional: Complete the Alternative text and Title fields.
  - j. Click Save field settings.
  - k. In the Manage fields tab for your newly created content type of *Slide show picture*, delete the `Body` field by clicking Delete on the OPERATIONS drop-down menu. Click Delete again to confirm.
2. Upload the images that you want to appear in your carousel.
    - a. Click Content  $\gg$  Add content, then click the content type that you added in step [1](#).
    - b. Enter a title for your image in the Title field.  
For example, if you had an image of a lighthouse, you can label the content as *Lighthouse*.
    - c. Click Choose file under Slide image and select an image for your slide show. Complete the Alternative text field with some text to use when the image cannot be loaded.
    - d. Click Save.
    - e. Repeat sub-steps [2.a](#) to [2.d](#) until you are satisfied with the content of the slides for your carousel.
  3. Create a view for your carousel.
    - a. Click Structure  $\gg$  Views  $\gg$  Add new view.
    - b. Complete View name.  
For example, Slide show.
    - c. Select the Create a block check box in the BLOCK SETTINGS section.
    - d. Select Slick Carousel for the display format.
    - e. Enter the number of slides you have for your carousel in the Items per block field, then click Save and edit.  
The Edit page for your slide show view is displayed.
    - f. Click the title of the view and enter `<none>` into the text field. Click Apply.
    - g. In the FIELDS section click Add, select the check box for slide image, and click Add and configure fields.
    - h. Ensure the check box for Create a label is not selected, and click Apply.
      - i. In the FIELDS section, click Content: Title  $\gg$  Remove.
      - j. In the FORMAT section, click Settings for Slick Carousel, and then set Skin Main to Default.
    - k. Scroll down to the CAPTION FIELDS section, and select the Content: slide image and Override main optionset check boxes.
    - l. In the OVERRIDABLE OPTIONS section, select the Autoplay, Dots, and Draggable check boxes.
    - m. Click Apply.
    - n. In the FILTER CRITERIA section, click Content: Published  $\gg$  Remove.
    - o. Click Save to save the Slide show view.
  4. Configure your home page to host the carousel.
    - a. Click Structure, then click Pages.
    - b. Click edit for the welcome page, then click content in the Panels section.
    - c. To remove the current welcome banner, click the down-arrow under the OPERATIONS column for the Welcome Banner, and select Delete. Click Delete again to confirm.
    - d. To add your carousel, click Add new block and select the slide show view you created in step [3](#). Deselect Display title and click Add block.
    - e. Click Update and save.

---

## Results

Your Developer Portal front page now has a slide show carousel.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Making your application's image public

You might want to display your application's image in an oauth authentication page to reassure customers that they are authenticating the correct application in the Developer Portal. That authentication uses a URL to the image that is stored on the Developer Portal. However, by default, those images are private unless you are logged in, which doesn't work if you want to display it in an oauth page. The solution is for the admin to change the `application_image` field to use public instead of private.

---

## Before you begin

You must have administrator access to complete this task.

---

## About this task

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Navigate to Structure  $\gg$  Content types  $\gg$  Application  $\gg$  Manage fields
4. Navigate to the Image label, then in the **Edit** drop down, select **storage settings**.
5. Click **Public files for Upload destination**.
6. Click **Save field settings**.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Providing navigation by tag hierarchy

You can provide the ability for users in the Developer Portal to navigate by using tag hierarchy.

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

The Categories block provides the ability to navigate by tag hierarchy. The Categories block is disabled by default, so you need to enable the block and then configure it to your requirements.

### Procedure

---

To provide navigation by tag hierarchy, complete the following steps:

1. Click Extend, in the filter box enter `Hierarchical Taxonomy Menu`.
2. Select **Hierarchical Taxonomy Menu**, then click Enable.
3. Click Structure > Block layout.

All of the blocks in the `connect_theme` are displayed.

4. Scroll to the region that you want to add the block to, for example Collapse left, click Place block.
5. Find the **Hierarchical Taxonomy Menu** block in the list and click Place block.
6. Complete any configuration tasks that you require for the **Collapse left** block, including selecting the correct taxonomy to use.
7. Click Save block to save your changes.

You can add new blocks, and modify the existing blocks that are displayed on Developer Portal pages. For more information, see [Adding and changing the blocks displayed on Developer Portal pages](#).

## Using the Views module in the Developer Portal

By using the Views module, you can fetch content from your Developer Portal site, and present it to users in different formats such as lists, graphs, and tables.

The Views module is a powerful SQL query builder that can access almost all the information in your Developer Portal site database and display it in any format.

There are many uses cases for views, but the following list shows some of the common ones:

- You want to display some of the content differently, such as Products, APIs, and applications.
- You want to display a block with the five most recent posts of some kind.
- You want to change the way that articles are displayed.
- You want to provide an unread forum posts list.
- You want to provide a monthly archive of posts.

For information about how to create a view in the Developer Portal, see the following topic. You can also follow a tutorial about creating a custom sort order view; see [Tutorial: Using a custom weighting sort order on the product list page](#).

- [Creating views in the Developer Portal](#)  
You can create new views in the Developer Portal, such as content lists of Products, APIs, and applications, by using the Views module.
- [Configuring the search results view in the Developer Portal](#)  
You can configure the way that the search results are displayed in the Developer Portal.
- [Configuring the default number of items in a view list in the Developer Portal](#)  
You can configure the default number of items that are displayed in a view list in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Creating views in the Developer Portal

You can create new views in the Developer Portal, such as content lists of Products, APIs, and applications, by using the Views module.

## Before you begin

---

You must have administrator access to complete this task.

## About this task

---

Creating views in the Developer Portal enables you to control the presentation of specific content for users. For more information about views, see [Using the Views module in the Developer Portal](#).

## Procedure

---

To create a view, complete the following steps.

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. On the administrator dashboard, click Structure > Views > Add new view.  
The Add view page is displayed.
4. Complete the View name and, optionally, the Description.
5. Complete the VIEW SETTINGS section with details of what you want your view to show, and how you want it to be sorted.  
For example, to create a view of APIs that are sorted by title, select Show Content, of type API, and sorted by Title.
6. Select whether to Create a page, Create a block, or both, for your view.  
A page is a full-screen page in the Developer Portal. Whereas a block would be a site block that you can then place on whatever pages you want to show a smaller view of the content, for example the 10 newest APIs.
7. Complete the options that you require for your view. For example, the display format, the number of items per page or block, whether to include a pager, whether to create a menu link, and whether to include an RSS feed.
8. Click Save and edit.  
Your new view opens in the Edit tab.
9. Refine your view further.  
Here you can further modify the display of your view or add new displays. More options include formatting of the view, what fields to include in a table or grid format, filtering and sorting criteria, add header or footer details, as well as advanced options around contextual filters, relationships, and behavior when there are no results to display. The Edit tab also includes a preview area, so you can check your view before publishing.
10. Click Save to make your changes permanent.  
When saved, your new view is visible in the Structure > Views pane.

## Results

---

You created a new view in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Configuring the search results view in the Developer Portal

You can configure the way that the search results are displayed in the Developer Portal.

## Before you begin

---

You must have administrator access to complete this task.

## About this task

---

In the Developer Portal, the search results are displayed as a view, and so you can control the presentation of this search content. For more information about views, see [Using the Views module in the Developer Portal](#).

## Procedure

---

To configure the search results view, complete the following steps.

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. On the administrator dashboard, click Structure > Views.  
The list of views is displayed.
4. Find the Search content view in the list, and click Edit.
5. Edit the Search content view settings as required.  
Here you can modify the display of the view or add new displays. For example, you can configure the formatting of the view, the filtering and sorting criteria, add header or footer details, as well as more advanced options around contextual filters, relationships, and behavior when there are no results to display. There is also a preview area so you can check the view before publishing.
6. Click Save to make your changes permanent.

## Results

---

You updated the view of the search results in the Developer Portal.

## What to do next

---

You can configure the search index and server that are used to generate the search results. For more information, see [Configuring search indexes and servers](#).

## Related information

---

- [📄 Drupal Views module](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

# Configuring the default number of items in a view list in the Developer Portal

You can configure the default number of items that are displayed in a view list in the Developer Portal.

## Before you begin

---

You must have administrator access to complete this task.

## About this task

---

In the Developer Portal, you can manage how many items in a list are shown for each page on a view. For more information about views, see [Using the Views module in the Developer Portal](#).

## Procedure

---

To configure the search results view, complete the following steps.

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. On the administrator dashboard, click Structure > Views.  
The list of views is displayed.
4. In the list, find the view name that you want to update, for example, Products, then click Edit.
5. Click Pager.
6. Select Display a specified number of items, click Apply.
7. Set the Items per page as required, click Apply.
8. Click Save to make your changes permanent.

## Results

---

You updated the default number of items in a view of the search results in the Developer Portal.

## What to do next

---

The Views module is a powerful SQL query builder that can access almost all the information in your Developer Portal site database and display it in any format. For more information, see [Using the Views module in the Developer Portal](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

# Configuration

As an administrator, you can control multiple aspects of the Developer Portal configuration, including managing security and general configuration tasks.

To learn how to configure specific aspects of your Developer Portal site, use the following section links.

- [Configuring content moderation](#)  
By configuring content moderation, you can configure a review and approval process for content types in the Developer Portal. You can specify which roles can perform which actions by assigning them the appropriate permissions.
- [General configuration tasks](#)  
You can perform general configuration tasks in the Developer Portal as an administrator.

- [Managing Developer Portal security](#)

You can manage multiple security elements in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Configuring content moderation

By configuring content moderation, you can configure a review and approval process for content types in the Developer Portal. You can specify which roles can perform which actions by assigning them the appropriate permissions.

### Before you begin

An example use case for configuring content moderation would be for a professional documentation writer to review an APIs documentation before it is published on the Developer Portal. They might, for example, notify the API Developer of typographical errors, suggest improvements to operation descriptions, or attach an image file. Edits might then be made before the documentation was republished to the API and then published to the Developer Portal.

You must have a Developer Portal enabled, and you must have administrator access to complete this task.

### About this task

By using content moderation, you can configure the workflow of your Developer Portal site so that you can moderate content types, such as APIs and Products. However, you cannot moderate Consumer organizations or applications.

### Procedure

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Enable the required modules:
  - a. On the administrator dashboard, click Extend.
  - b. In the search bar enter **workflows**, then select the Workflows module and click Enable.
  - c. In the search bar enter **content moderation**, then select the Content Moderation module and click Enable.
4. Navigate to Configuration > Workflow > Workflows
5. Check that **Editorial** is listed as a workflow. If it isn't listed:
  - a. Click + **Add workflow**.

**Label \***

Machine name: editorial [\[Edit\]](#)

**Workflow type \***

Content moderation ▼

Save

- b. Enter **Editorial** as the label.
  - c. Select the workflow type **Content moderation**.
  - d. Click **Save**.
6. Set up the workflow:
    - a. Click **Edit** on the **Editorial** workflow.
    - b. Click the **Add a new state** link.

Label \*

Editorial

Machine name: editorial

▼ STATES

STATE	OPERATIONS
 Draft	
 Published	
 Review	

[Add a new state](#)

c. Enter the value **Review** in the **State label** field, leave the **Published** and **Default revision** check boxes cleared then click Save.

State label \*

Review

Machine name: review [\[Edit\]](#)

Published

When content reaches this state it should be published.

Default revision

When content reaches this state it should be made the default revision; this is implied for published states.

d. Drag the **review** state to between the **Draft** and **Published** states then click 'Save'. If the drag handles are not visible, then click the **Hide row weights** link in the **STATES** section to make them appear.

Label \*

Editorial

Machine name: editorial

▼ STATES

 \* You have unsaved changes.

STATE	OPERATIONS
 Draft	
 Review*	
 Published	

[Add a new state](#)

e. Click the **Add a new transition** link.

f. Enter the value **Review** in the **Transition Label** field, tick the **Draft** check box in the **From** section and click **Review** in the **To** section then click Save.

g. Drag the **Review** transition to between the **Create New Draft** and **Published** transitions, then click Save.

h. Click the **Edit** operation on the **Create New Draft** transition.

i. In the **From** check box list, untick **Published** and tick **Review** then click Save.

j. Click the **Edit** operation on the **Published** transition.

k. In the **From** check box list, untick **Draft** and tick **Review** then click Save.

l. Click **Select** for the **Content types** item in the **THIS WORKFLOW APPLIES TO** section.

m. Select the **Product** content type then click Save.

7. Set up the permission schema for the workflow:

a. Click **People > Roles > Add a new role**.

b. In the **Role Name** field, enter the value **Editor** then click Save.

c. Drag the **Editor** role to between the **Content Author** and **Administrator** roles then click Save.

d. Click the **Permissions** tab and scroll down to the **Content Moderation** permission section.

- e. For the EDITOR role, select all the permissions in the **Content Moderation** section.
  - f. For the CONTENT AUTHOR role, select the permissions **Editorial workflow: Use Create New Draft transition, View any unpublished content, and View the latest version** then click Save permissions.
  - g. Ensure that the EDITOR and CONTENT AUTHOR roles have the permission **Use the administration toolbar**.
8. Assign the permissions to users in the portal. If you do not already have some registered users in your portal, create a new consumer organization and invite two new users to it.
- a. Click People.
  - b. Tick the check box next to one of the users in the list, but not the admin user, then from the **Action** drop-down select **Add the Content Author role to the selected user(s)** then click **Apply to selected items**.
  - c. Tick the check box next to another one of the users in the list, but not the admin user, then from the **Action** drop-down select **Add the Editor role to the selected user(s)** then click **Apply to selected items**.

---

## Results

You successfully configured content moderation on your Developer Portal. You can now use the API manager user interface to publish a product to the portal, and transition the product from draft to review state.

- **[Editing, reviewing, and publishing moderated content](#)**

If you have published content from API Manager UI to your Developer Portal or created content within the Developer Portal, you can edit and review the content through the Moderated content page before you publish it in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Editing, reviewing, and publishing moderated content

If you have published content from API Manager UI to your Developer Portal or created content within the Developer Portal, you can edit and review the content through the Moderated content page before you publish it in the Developer Portal.

---

## Before you begin

You must have administrator access to complete this task.

You must have content that is published to the Developer Portal from the API Manager UI.

Your role must have the necessary permissions that enable you to perform the tasks. For more information on assigning the necessary tasks, see [Configuring content moderation](#).

---

## About this task

In addition to editing content through the content moderation page, you can specify whether the content needs further review, or even publish the content if you have the permission.

---

## Procedure

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. On the administrator dashboard, click Content.
4. Click the Moderated content tab.
5. If you have the necessary permissions to edit your content type, for example, you are a **Content author**:
  - a. Click the Title of the content type that you want to edit, then click the Edit.
  - b. Edit your content to your specification, then click Save.  
You are redirected to the **View** tab.
  - c. When you have finished editing your content type on the **edit** tab, ensure that the **Review** state is selected from the **Change to** drop down, then click Save.
6. If you have the necessary permissions to review and publish your content type, for example, you are a **Reviewer**:
  - a. On the administrator dashboard, click Content.  
The content page is displayed listing all content.
  - b. Click the Moderated content tab.
  - c. Click the Title of the content type that you want to review.
  - d. Optional: If the content that you are reviewing requires editing, click Edit, apply the changes to your content type, then click Save.  
You are redirected to the View tab.

---

## Results

You edited, reviewed, and published your draft content type.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## General configuration tasks

You can perform general configuration tasks in the Developer Portal as an administrator.

To learn how to configure specific aspects of your Developer Portal site, use the following topic links.

- [Adding a page load progress indicator](#)  
You can extend your Developer Portal site by adding a page load progress indicator. This option might be useful on servers that have a slow connection to the API Manager, or for customers that are using OIDC and have slow response times from their OIDC provider.
- [Adding custom fields to user records](#)  
You can add custom fields to user records in the Developer Portal.
- [Checking the site status report](#)  
You can check the site status report in the Developer Portal.
- [Clearing the server caches](#)  
You can clear the server caches from within the Developer Portal.
- [Configuring a proxy](#)  
You can configure the proxy settings in your Developer Portal.
- [Configuring Stripe in the Developer Portal](#)  
You can offer free use of your Product Plans to your API consumers, or you can offer Products with paid Plans. To enable API consumers to subscribe to Products with paid Plans, you must first configure the Stripe payment method in your Developer Portal.
- [Configuring cron to run scheduled tasks](#)  
You can configure cron to run scheduled tasks in the Developer Portal.
- [Configuring search indexes and servers](#)  
You can configure search indexes and servers in the Developer Portal by using the Search API module.
- [Configuring the date and time](#)  
You can configure the date and time in the Developer Portal.
- [Configuring the notifications event log settings](#)  
You can configure the settings of the notifications event log for the activity feed on your Developer Portal.
- [Configuring the settings of a Consumer organization](#)  
You can configure the settings of your Consumer organization from within your Developer Portal. The default settings allow users to delete their accounts and organizations, create more consumer organizations, rename their organization, and change the owner of their organization.
- [Configuring the site default timezone](#)  
You can configure the site default timezone in the Developer Portal.
- [Configuring the site error handling](#)  
You can configure the site error handling in the Developer Portal.
- [Configuring which buttons are displayed in the WYSIWYG rich text editor](#)  
You can configure which buttons are displayed in the WYSIWYG rich text editor in the Developer Portal.
- [Configuring which languages are available](#)  
You can configure which languages are available in the Developer Portal.
- [Customizing user account settings](#)  
You can customize the user account options that are displayed to users when they register and use the Developer Portal.
- [Disabling languages](#)  
You can extend your Developer Portal site by managing which languages are available for use on the site.
- [Disabling test tool restrictions](#)  
The default OAuth provider contains security mechanisms that prevent the ability to obtain authorization tokens in the Developer Portal test tool when you use Implicit or Authorization Code grant types. If your OAuth provider allows those actions to function correctly from the test tool, you can disable this option.
- [Enabling a cookie compliance banner](#)  
You can add a cookie compliance banner to your Developer Portal site by configuring the EU Cookie Compliance module.
- [Enabling code languages for code snippets](#)  
You can specify the languages that code snippets for APIs can be displayed in.
- [Enabling code snippets for SOAP APIs](#)  
By default, code snippets are only shown for REST APIs. You can enable code snippets for SOAP APIs.
- [Forcing new users to accept terms and conditions](#)  
You can extend your Developer Portal site by forcing new users to accept the terms and conditions before they are able to create accounts.
- [Hiding the admin registry on the login form](#)  
You can hide the admin registry as an option on the login form. The use case for this option might be a public facing Developer Portal where you want to remove the admin access from customer view.
- [Hiding the certificate in the header for APIs secured with mutual TLS](#)  
You can hide the certificate in the header for APIs secured with mutual TLS. By default, the `x-client-certificate` header is shown in an API when mutual TLS is configured. You can choose to turn off this option in your Developer Portal.
- [Importing and exporting taxonomies](#)  
You can import and export taxonomies in the Developer Portal.
- [Restricting access by IP address](#)  
You can restrict access to a role or a user by IP address in the Developer Portal.
- [Restricting or preventing access from search engines](#)  
You can restrict or prevent access to your Developer Portal from search engines. You might want to control the access if you have a development or test site.
- [Toggling the site in and out of maintenance mode](#)  
You can put the Developer Portal site into maintenance mode for short periods of time. During maintenance mode only an administrator is able to access the site, and all other users who enter the site URL get a maintenance message set by the administrator.
- [Viewing available updates](#)  
You can view available updates in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Adding a page load progress indicator

You can extend your Developer Portal site by adding a page load progress indicator. This option might be useful on servers that have a slow connection to the API Manager, or for customers that are using OIDC and have slow response times from their OIDC provider.

---

### Before you begin

You must have administrator access to complete this task.

---

### Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.
2. In the administrator dashboard, click Extend.  
The List tab for the Extend page opens, and the list of installed modules is displayed. The list shows all the modules that are installed. The enabled modules are displayed with a selected check box. The disabled modules are displayed without a selected check box.
3. Enter `page_load_progress` into the search filter.  
The **Page Load Progress** content item is displayed in the list of content.
4. By default, the **Page Load Progress** module is enabled. However, if not, select the check box and click Enable.  
You have now enabled the default settings for the **Page Load Progress** module.
5. To change the default settings for the module, navigate to Configuration > User interface > Page Load Progress.
6. Decide which settings you want to change, for example, **Time to wait before locking the screen**, and click Save.  
Note: Changing the settings does not apply to the OIDC buttons. If it is enabled, the OIDC buttons use the page load process indicator, but do not allow any configuration.
7. To enable the permissions, navigate to People > Permissions.
8. Scroll down to **Page Load Progress**, check the boxes for anonymous and authenticated for **Use Page Load Progress**.

Page Load Progress						
Administer Page Load Progress	<input type="checkbox"/>	<input checked="" type="checkbox"/>				
Use Page Load Progress	<input checked="" type="checkbox"/>					

9. Click Save permissions.

---

### Results

You successfully enabled the **Page Load Progress**. Now, the page loading spinner is automatically added to the login and register forms for OIDC buttons.

---

### What to do next

You can customize the appearance of the modal page and spinner in CSS in a custom theme.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Adding custom fields to user records

You can add custom fields to user records in the Developer Portal.

---

### Before you begin

You must have administrator access to complete this task.

---

### About this task

Any data that is added to a custom field for user records will remain in the Developer Portal database.

---

### Procedure

1. In the administrator dashboard, click Configuration > People > Account settings.
2. Click the MANAGE FIELDS tab.
3. Click Add field.
4. Specify the type of data that your field can store by selecting the type from the Add a new field list.

5. Enter a label for your field in the Label field.
6. Optional: If you want to edit the machine name that is automatically created based on your label, click Edit and enter the new name.
7. Click Save and continue.
8. Configure any additional values for the new field then click Save field settings.  
You have added a custom field to your user record.

---

## What to do next

You can configure the contents of your custom field depending on what type of data you specified it could store.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Checking the site status report

You can check the site status report in the Developer Portal.

---

## Before you begin

You must have administrator access to complete this task.

---

## Procedure

To check the site status report, complete the following steps:

1. Click Reports in the administrator dashboard.
2. Click Status report.
3. You can review information relating to the site status report from this view.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Clearing the server caches

You can clear the server caches from within the Developer Portal.

---

## Before you begin

You must have administrator access to complete this task.

---

## Procedure

1. In the administrator dashboard, click Configuration, then in the Development section, click Performance.
2. Click Clear all caches.  
You have cleared the server caches, and a message will be displayed stating: `Caches cleared`.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Configuring a proxy

You can configure the proxy settings in your Developer Portal.

---

## Before you begin

You must have administrator access to complete this task.

---

## About this task

The Developer Portal communicates with the management server by way of the consumer and product APIs. For a Developer Portal that is deployed externally to the management server zone, and does not have access to the consumer and product APIs, a proxy can be used.

## Procedure

---

To configure a proxy to use for communicating with management server APIs, complete the following steps:

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. Click Configuration > System > IBM API Connect in the administrator dashboard.
4. To configure a proxy, select **Enable Proxy Support**, and make the required changes.

**PROXY CONFIGURATION (EXPERIMENTAL)**

If a proxy is required to allow communication from the portal server to the management server zone, and does not have access to the consumer and product APIs, a proxy can be used.

Enable Proxy Support

**Proxy type**

CURLPROXY\_HTTP

Select what type of proxy to use, CURLPROXY\_HTTP is the default.

**Proxy URL**

Provide the URL of the proxy e.g. <http://proxyserver.domain.com:8080>.

**Proxy Authentication**

If the proxy requires authentication then provide the 'username:password'.

Save configuration

5. When your changes are complete, click Save configuration.

## Results

---

You successfully configured a proxy on your Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Configuring Stripe in the Developer Portal

You can offer free use of your Product Plans to your API consumers, or you can offer Products with paid Plans. To enable API consumers to subscribe to Products with paid Plans, you must first configure the Stripe payment method in your Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

To use Stripe as your credit card processing vendor, you must have port 443 open to HTTPS communication between the Stripe API and your Developer Portal management and the Management cluster servers. See [Firewall requirements on Kubernetes](#) and [Firewall requirements on VMware](#) for more information about this requirement.

The billing microservice must be enabled on your management system by your system administrator. See [Configuring monetization on VMware](#) and [Configuring monetization on Kubernetes](#) for more information.

Billing integration support must be configured in the API Manager. For more information, see [Monetizing your Products](#).

### About this task

---

API Connect includes a subscription billing feature that allows API providers to define pricing Plans in their API Products, and monetize their API offerings. If a Product contains a pricing Plan, API consumers must enter their payment information into the Developer Portal before they can subscribe to that Plan.

API Connect supports integration with Stripe Subscription Billing, an independent cloud service that manages monetized product Plans, customers, their payment information, and their subscription history, in order to generate monthly invoices and charge customers automatically. With this integration, Stripe serves as both the subscription billing system and the payment processing system.

Support is provided for Stripe in the Developer Portal, but before API consumers can enter their payment information, you need to configure the Stripe billing support in every Developer Portal where you will offer paid Plans. After this support is configured, API consumers can provide their payment information, and then subscribe to the paid Plans. Complete the following instructions to enable the APIC Monetization Stripe Integration module, and then configure your Stripe API credentials.

## Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. In the administrator dashboard, click Extend.  
The List tab for the Extend page opens, and the list of installed modules is displayed. The list shows all the modules that are installed. The enabled modules are displayed with a selected checkbox. The disabled modules are displayed without a selected checkbox.
3. Enter `stripe` into the search filter.  
The `ibm_stripe_payment_method` module called APIC Monetization Stripe Integration is displayed in the list of contents.
4. Select APIC Monetization Stripe Integration and click Enable.  
The default settings for the `ibm_stripe_payment_method` module are now enabled.
5. In the administrator dashboard, click Configuration, > System, > IBM API Developer Portal Billing.  
The IBM API Developer Portal Billing Settings page is displayed.
6. Change the drop-down option to be the newly enabled APIC Monetization Stripe Integration (`ibm_stripe_payment_method`) as the module to use to create payment methods for the Stripe billing provider. Click Save configuration.
7. In the administrator dashboard, click Configuration, > System, > IBM APIC Stripe Integration, and enter your Stripe API credentials. These credentials must match the Stripe API credentials for the billing integration resource that is attached to the Catalog for this Developer Portal.  
Refer to your Stripe dashboard to get your publishable key and secret key; see <https://dashboard.stripe.com/apikeys>.  
Note: Each Stripe account comes with two sets of API keys, one for testing, and one for production. Each set of API keys has a distinct namespace for Stripe objects. Test API keys cannot see objects created by production API keys, and vice versa. You cannot switch the API keys of one of your billing integrations with the keys from another account, or swap your test and production keys over, as that would prevent API Connect from resolving the Stripe objects that were created by using the old keys. If you want to use your Stripe test keys, you must create a separate Catalog for testing, and not add your Stripe test keys to production Catalogs.
8. Click Save integration.

## Results

---

You successfully configured the Stripe payment method in the Developer Portal. API consumers can now add a payment method to their consumer organization, so that they can subscribe to Products with paid Plans.

## What to do next

---

After both the Catalog and the Developer Portal are configured, you can create Products with pricing Plans. See [Defining a Product with billing integration](#) for more information.

## Related information

---

- [Monetizing your Products](#)
- [Considerations when changing a Product lifecycle with billing](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Configuring cron to run scheduled tasks

You can configure cron to run scheduled tasks in the Developer Portal.

## Before you begin

---

You must have administrator access to complete this task.

## Procedure

---

To configure cron to run scheduled tasks, complete the following steps:

1. Click Configuration in the administrator dashboard.
2. Under the SYSTEM heading, click Cron.
3. Use the drop-down list for the module you want to configure and select Edit.
4. From the Run cron every drop-down menu, select the frequency of cron runs for this module.
5. Click Save.

You have configured cron to run scheduled tasks.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Configuring search indexes and servers

You can configure search indexes and servers in the Developer Portal by using the Search API module.

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

The Search API module provides a generic framework for search capabilities within the Developer Portal, and you can customize the default database server and content index setup that is provided. By default, the search in the Developer Portal runs over the entire OpenAPI and WSDL documentation. It is not possible to restrict the search to specific sections of an Open API or WSDL document. The search can be configured to include any custom fields that were added to the Developer Portal, but it does not include any attached files.

The search results page is a view in the Developer Portal, and so it can also be configured. For more information, see [Configuring the search results view in the Developer Portal](#).

### Procedure

---

To configure the default database server and content index settings, complete the following steps.

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. Click Configuration > Search and metadata > Search API in the administrator dashboard.
4. To configure the server settings, click Edit against the Database Server and make the required changes. For example:
  - Server name; the displayed name for the server.
  - Description; a description of the server.
  - CONFIGURE DATABASE BACKEND; the minimum number of characters a word must consist of to be indexed, and whether to search on parts of a word. However, wildcard searching can make searches on large sites very slow.
  - AUTOCOMPLETE SETTINGS; how suggestions are computed when autocompletion is used.
5. To configure the index settings, click Edit against the Default content index and make the required changes. For example:
  - Index name; the displayed name for the index.
  - Data sources; the data sources of the items to be stored in the index.
  - CONFIGURE THE DATASOURCE; for each data source, set which bundles of content should be indexed, and in which languages.
  - Server; the server that the index should use.
  - Description; a description for the index.
  - INDEX OPTIONS; whether the index is read only, whether to index new or updated items immediately, and setting how many items to index when indexing items during a cron run.
6. When your changes are complete, click Save.  
The View page of the updated default database server or default content index is displayed.

### Results

---

You successfully configured the search indexes and servers in the Developer Portal.

### What to do next

---

You can configure how searches are displayed by editing the Search content view. For more information, see [Configuring the search results view in the Developer Portal](#).

### Related information

---

- [Search API module](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Configuring the date and time

You can configure the date and time in the Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

To configure the date and time, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration in the administrator dashboard.
3. Under the Regional and language heading, click Date and time formats.
4. Click Edit for the format you want to change.
5. Change the settings of the format then click Save format.  
You have configured the date and time.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Configuring the notifications event log settings

You can configure the settings of the notifications event log for the activity feed on your Developer Portal.

### About this task

The Developer Portal includes an activity feed that shows Consumer organization users the details of events that occur on the organization, such as application creation, subscriptions, and so on. This activity feed is displayed by default on the navigation bar of the organization, and as an additional tab on the organization page and the application page.

The default number of days that events are kept for is 30. You can edit this setting in the IBM APIC Notifications Settings page of your Developer Portal, as described in the following instructions.

### Procedure

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Navigate to Configuration > System > IBM APIC Notifications Settings.  
The IBM APIC Activity Feed Settings page is displayed.
4. Enter the required number of days to keep events for in the Retention Days field.
5. Click Save configuration.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Configuring the settings of a Consumer organization

You can configure the settings of your Consumer organization from within your Developer Portal. The default settings allow users to delete their accounts and organizations, create more consumer organizations, rename their organization, and change the owner of their organization.

### Procedure

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Navigate to Configuration > System > IBM API Connect.
4. Scroll down to **CONSUMER ORGANIZATIONS**.

#### CONSUMER ORGANIZATIONS

Allow users to delete their accounts

If checked then users will be allowed to delete their accounts.

Allow users to create additional consumer organizations

If checked then users will be allowed to create additional consumer organizations. Note that self service onboarding must also be enabled in API Manager catalog settings.

Allow users to rename their organization

If checked then consumer organization Owner and Administrators will be able to rename their consumer organizations.

Allow users to change the owner of their organization

If checked then consumer organization Owner and Administrators will be able to change the owner of their consumer organizations.

Allow users to delete their organizations

If checked then Owner or Administrators users will be allowed to delete their consumer organizations.

5. Clear which ever options you want to change, click Save configuration.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Configuring the site default timezone

You can configure the site default timezone in the Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

To configure which languages are available, complete the following steps:

1. Click Configuration in the administrator dashboard.
2. Under the REGIONAL AND LANGUAGE heading, click Regional settings.
3. From the Default Time Zone drop-down menu, select the default time zone.
4. Click Save configuration.

You have configured the default time zone.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Configuring the site error handling

You can configure the site error handling in the Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

To configure the site error handling, complete the following steps:

1. Click Configuration in the administrator dashboard.
2. Under the DEVELOPMENT heading, click Logging and errors.
3. You can review and configure all information relating to site error handling from this view.  
Note: On a production system, set Logging and errors to **none**, to avoid any security issues.
4. Click Save configuration.

You have configured the site error handling.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Configuring which buttons are displayed in the WYSIWYG rich text editor

You can configure which buttons are displayed in the WYSIWYG rich text editor in the Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

To configure which buttons are displayed in the WYSIWYG rich text editor, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration, Content authoring, Text formats and editors.
3. Click Configure for the Full HTML profile.

4. In the **TOOLBAR CONFIGURATION** section, edit the buttons that you want to expose.
5. Click Save configuration.  
You have configured the editor buttons that are displayed in the WYSIWYG rich text editor.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Configuring which languages are available

You can configure which languages are available in the Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

To configure which languages are available, complete the following steps:

1. Click Configuration in the administrator dashboard.
2. Under the REGIONAL AND LANGUAGE heading, click Languages.
3. Under the DEFAULT heading, select the radio button for the language you want to set as default.
4. To add a new language, click +Add language. Use the drop-down menu to select the language you want to add.
5. Click Save configuration.  
You have configured the languages that are available.
6. You can also provide your own translations, for strings of the website that are not translated, from the User interface translation view, under Configuration > Regional and Language in the administrator dashboard.

### Results

---

You have configured the available languages for the Developer Portal.

Note: Multilingual API and Product documentation can be created by using an `x-ibm-languages` extension directly in the OpenAPI definition. For more information, see [Using x-ibm-languages to create multilingual API and Product documentation](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Customizing user account settings

You can customize the user account options that are displayed to users when they register and use the Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

You can change what fields users of the Developer Portal see when they register to use the site, when they log in, and when they view their user account profile. For instance, you can change the field order display, hide fields, and add custom fields.

As an example, the Consumer organization field is a required entry field when a user creates an account on the Developer Portal. However, you can configure this field to be hidden, in which case the field is automatically completed with a default entry of `firstname lastname` of the new user instead.

### Procedure

---

To customize the user account settings, complete the following steps.

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. Click Configuration > People > Account settings in the administrator dashboard.  
The Account settings page is displayed.
4. From the Settings tab you can edit the following options:
  - a. CONTACT SETTINGS; enable or disable the personal contact form for new users.
  - b. PASSWORD RESET TIMEOUT; set the timeout in seconds for one-time login links. This setting applies only to the admin user of the Developer Portal.
  - c. ANONYMOUS USERS; set the name to be used to indicate anonymous users.
  - d. ADMINISTRATION ROLE; assign the administrator role that is automatically given new permissions whenever a new module is enabled. The default is Superuser.

Note: The Superuser role has the highest level of permissions in the Developer Portal. This role bypasses all content access control, which means that users that have a Superuser role can see all of the site content. For more information, see [Working with roles in the Developer Portal](#).

- e. LANGUAGE SETTINGS; enable or disable translation.
  - f. REGISTRATION AND CANCELLATION; enable or disable the password strength indicator, and set the action to take when a user account is canceled.
  - g. Notification email address; set the email address to use as the from address for all account notifications.
  - h. Emails; edit the emails that are sent when an account is blocked or canceled, or when a new password is requested.
  - i. Click Save configuration to save your updates.
5. Click the Manage fields tab to customize the fields that are available for storing user data.  
Here you can edit the settings for current fields, delete fields, and add new fields. Remember to save any updates that you make.
6. Click the Manage form display tab to configure how the user forms are displayed.
- a. Click the Default form mode to configure how the form fields display when a user profile is being edited.
  - b. Click the Register form mode to configure how the form fields display when a new user creates an account.  
For each user form mode you can edit the field settings, enable and disable fields, and drag the fields to change their display order. You can also manage the form modes.  
For example, to hide the Consumer organization field when a new user creates an account, click the Register form mode, and drag the Consumer organization into the Disabled section.
  - c. Click Save to save your updates.
7. Click the Manage display tab to configure how fields are displayed on a user profile page.  
You can edit the field settings, enable and disable fields, and drag the fields to change their display order. You can also manage the display view modes. Remember to save any updates that you make.
8. Click the Translate account settings tab to configure the language options for the user account settings. Remember to save any updates that you make.

## Results

You successfully customized the user account settings in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Disabling languages

You can extend your Developer Portal site by managing which languages are available for use on the site.

## Before you begin

You must have administrator access to complete this task.

## Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.

To disable all languages apart from English.

2. Navigate to Configuration > Regional and language > Languages > Detection and selection.
3. Select the checkbox for the **Selected language** detection method, and deselect all other methods, then click Save settings.

### Interface text language detection

Order of language detection methods for interface text. If a translation of interface text is available in the detected language, it will be displayed.

DETECTION METHOD	DESCRIPTION	ENABLED	OPERATIONS
+ Account administration pages	Account administration pages language setting.	<input type="checkbox"/>	
+ URL	Language from the URL (Path prefix or domain).	<input type="checkbox"/>	<button>Configure</button>
+ Session	Language from a request/session parameter.	<input type="checkbox"/>	<button>Configure</button>
+ User	Follow the user's language preference.	<input type="checkbox"/>	
+ Browser	Language from the browser's language settings.	<input type="checkbox"/>	<button>Configure</button>
+ Selected language	Language based on a selected language.	<input checked="" type="checkbox"/>	<button>Configure</button>

### Content language detection

Order of language detection methods for content. If a version of content is available in the detected language, it will be displayed.

Customize Content language detection to differ from Interface text language detection settings

Save settings

To disable one or more languages.

4. In the administrator dashboard, click Extend.  
The List tab for the Extend page opens, and the list of installed modules is displayed. The list shows all the modules that are installed. The enabled modules are displayed with a selected checkbox. The disabled modules are displayed without a selected checkbox.

5. Enter `disable language` into the search filter.  
The Disable Language content item is displayed in the list of content.
6. Select the checkbox for the **Disable Language** module, and click Enable.
7. Navigate to Configuration > Regional and language > Languages > Detection and selection.
8. Select the checkbox to enable URL, and click Save settings.

#### Interface text language detection

Order of language detection methods for interface text. If a translation of interface text is available in the detected language, it will be displayed.

DETECTION METHOD	DESCRIPTION	ENABLED	OPERATIONS
Account administration pages	Account administration pages language setting.	<input type="checkbox"/>	
URL	Language from the URL (Path prefix or domain).	<input checked="" type="checkbox"/>	<a href="#">Configure</a>

9. Navigate to Configuration > Regional and language > Languages.
10. Click Edit on the language that you want to disable.
11. Select the checkbox to **Disable language**, then click Save language.

### Edit language ☆

Edit

This option will redirect to the selected language when a user calls the disabled language

[Save language](#)

## Results

You successfully disabled your chosen language.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Disabling test tool restrictions

The default OAuth provider contains security mechanisms that prevent the ability to obtain authorization tokens in the Developer Portal test tool when you use Implicit or Authorization Code grant types. If your OAuth provider allows those actions to function correctly from the test tool, you can disable this option.

## Before you begin

You must have administrator access to complete this task.

## Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.
2. In the administrator dashboard, click Configuration > System > IBM API Connect.
3. In the **CONFIGURATION** section, deselect the **Optimise OAuth experience in test tool** option

Optimise OAuth experience in test tool

If checked then certain OAuth flows (such as implicit or access code) which cannot be completed from the test tool for technical reasons are optimised to improve usability.

4. Click Save configuration.

## Results

You successfully disabled the **Optimise OAuth experience in test tool** option. You can now use the Developer Portal test tool to test an Implicit or Authorization Code grant type in an OAuth provider API, if your OAuth provider allows those actions to function correctly from the test tool.

## What to do next

---

You can enable the **Optimise OAuth experience in test tool** option by repeating the task but selecting the option and then clicking Save configuration.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Enabling a cookie compliance banner

You can add a cookie compliance banner to your Developer Portal site by configuring the EU Cookie Compliance module.

---

### Before you begin

You must have administrator access to complete this task.

---

### About this task

The EU Cookie Compliance module provides a customizable pop-up notification that informs visitors to your site that cookies are being used. The notification enables your site visitors to find out more about cookies, and to decide not to browse the site if they disagree with using cookies. You can also provide a link from your cookie compliance banner to an internal or external privacy policy. For more information about configuring an internal privacy policy, see [Customizing the privacy policy statement](#).

The EU Cookie Compliance module is enabled by default. The following instructions show you how to configure the notification.

---

### Procedure

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. Click Configuration > System > EU Cookie Compliance.  
The Settings tab of the EU Cookie Compliance page is displayed.
4. In the SETTINGS section select Enable banner, otherwise the notification does not display.
5. In the PRIVACY POLICY section, edit the Privacy policy link field to provide a link to your privacy policy or other page that explains cookies to your site visitors. The default link is /privacy, which links to the Privacy Policy content that is configured within the Developer Portal. For more information, see [Customizing the privacy policy statement](#).  
External links should start with http:// or https://. For example:  

```
https://example.com/privacy
```
6. Configure the remaining options as required. For example, you can change the wording, and edit the display size and color.
7. Click Save configuration to save your updates.

---

### Results

You successfully enabled a cookie compliance banner on your Developer Portal site. New visitors to your site are now prompted to accept cookies.

---

## Enabling code languages for code snippets

You can specify the languages that code snippets for APIs can be displayed in.

---

### Before you begin

You must have administrator access to complete this task.

---

### Procedure

1. On the administrator dashboard, click Configuration > System > IBM API Connect.
2. In the API Code Snippets section, select the check boxes for the languages that you want to make available for the code snippets to be displayed in.
3. Click Save configuration.

The languages that you have enabled are displayed as options for your code snippets.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Enabling code snippets for SOAP APIs

By default, code snippets are only shown for REST APIs. You can enable code snippets for SOAP APIs.

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

Code snippets for SOAP APIs use raw HTTP, and do not use any SOAP libraries.

### Procedure

---

1. On the administrator dashboard, click Configuration, System, IBM API Connect.
2. In the API Code Snippets section, select the Display code snippets for SOAP APIs as well as REST APIs check box.
3. Click Save configuration.  
The languages that you have enabled are displayed as options for your code snippets.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Forcing new users to accept terms and conditions

You can extend your Developer Portal site by forcing new users to accept the terms and conditions before they are able to create accounts.

### Before you begin

---

You must have administrator access to complete this task.

**Note:** From IBM® API Connect Version 10.0.4.0, the **Legal** module is included in the list of core Developer Portal modules. The **Terms of use** module is still available in the Developer Portal, but the **Legal** module provides more configuration options.

### About this task

---

Use the following instructions to enable and configure the **Legal** module for your site terms and conditions.

### Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. In the administrator dashboard, click Extend.  
The List tab for the Extend page opens, and the list of installed modules is displayed. The list shows all the modules that are installed. The enabled modules are displayed with a selected check box. The disabled modules are displayed without a selected check box.
3. Enter `legal` into the search filter.  
The Legal content item is displayed in the list of content.
4. Select the check box for the **Legal** module, and click Enable.
5. Navigate to Configuration, People, Legal.
6. Enter your Terms & Conditions statement, and select the Text format that you require.
7. Click Save configuration.

### Results

---

You successfully enabled the **Legal** module. Now, when a user tries to create an account on your Developer Portal site, they must agree to the terms and conditions as a part of the registration.

### Terms and Conditions of Use

Terms & Conditions

These are the terms and conditions of using this site. Select the checkbox to accept the Terms and Conditions of Use.

Accept Terms & Conditions of Use \*

## What to do next

You can edit the terms and conditions page by navigating to Configuration > People > Legal, and making the changes that you require. You can disable the use of terms and conditions during site registration by deleting the terms and conditions content, and then disabling the `Legal` module.

If you prefer to use the `Terms of use` module, you can enable the module, and then navigate to Configuration > People > Terms of use, and select the page that contains your site terms and conditions, for example `Terms of use (1)`. For information about how to customize the statement, see [Customizing the terms of use statement](#). The terms are displayed when you create an account and also from the link in the site footer. You can disable the use of terms and conditions during site registration by disabling the module.

## Related information

- [Drupal Legal module](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Hiding the admin registry on the login form

You can hide the admin registry as an option on the login form. The use case for this option might be a public facing Developer Portal where you want to remove the admin access from customer view.

## Before you begin

You must have administrator access to complete this task.

## Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.
2. On the administrator dashboard, click Configuration > System > IBM API Developer Portal.
3. In the Configuration section, select the check box for **Hide the admin registry on the login form**.
4. Click Save configuration.

The **Hide the admin registry on the login form** configuration is saved.

## What to do next

The admin registry is no longer shown on the login form. However, it is still accessible directly. The user can navigate to `<site_url>/user/login?registry_url=/admin`.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Hiding the certificate in the header for APIs secured with mutual TLS

You can hide the certificate in the header for APIs secured with mutual TLS. By default, the `x-client-certificate` header is shown in an API when mutual TLS is configured. You can choose to turn off this option in your Developer Portal.

### Before you begin

The parameters for the example API showing the certificate.

Parameters	Header
<b>Accept</b> optional	Permitted values application/json
<b>Content-Type</b> optional	application/json
<b>X-Client-Certificate</b> required	The TLS certificate of your application string

#### Example

```
-----BEGIN CERTIFICATE-----xxxEXAMPLExxxxxxxxxxEXAMPLExxxxxxxxxxEXA
```

You must have administrator access to complete this task.

### Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.
2. On the administrator dashboard, click Configuration > System > IBM API Connect.
3. In the Configuration section, deselect the checkbox for **Show certificate in header for APIs secured with mutual TLS**.
4. Click Save configuration.  
The **Show certificate in header for APIs secured with mutual TLS** configuration is saved.  
The parameters for the example API now not showing the certificate:

Parameters	Header
<b>Accept</b> optional	Permitted values application/json

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Importing and exporting taxonomies

You can import and export taxonomies in the Developer Portal.

### Before you begin

You must have administrator access to complete this task.

### Procedure

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. In the administrator dashboard, click Configuration > Content authoring > Term CSV Export/Import.
4. Select Term CSV Import, or Term CSV Export.

For Term CSV Import

5. Enter your CSV input in the format given in the examples, and select the **Taxonomy** from the drop-down list.

**CSV Term Import** ☆

Term CSV Import | Term CSV Export

You successfully imported or exported a taxonomy.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

# Restricting access by IP address

You can restrict access to a role or a user by IP address in the Developer Portal.

## Before you begin

You must have administrator access to complete this task.

## About this task

By restricting access to a role by IP address, that role is unavailable to users outside of the IP address ranges that you define. If a role restriction is triggered, the user's session is unaffected, but the restricted role is no longer available to the user. Role restriction affects only the availability of the restricted role to users. Role restrictions are available for all roles, except `anonymous user` and `authenticated user`.

By restricting login access of a user by IP address, the user is unable to log in outside of the IP address ranges that you define. You can also specify global IP address ranges, which apply to all users. IP restrictions are checked on every page load. If a user restriction is triggered by an attempt at logging in being denied, then the user is logged out and sent to the 'error page' that is specified by the site administrator.

Note: IP address ranges must be entered in CIDR notation that is separated with semi-colons and no trailing semi-colon. For more information on CIDR notation, see [CIDR format](#).

## Procedure

1. In the Developer Portal, click Configuration, People, Restrict by IP, then click **Restrict log in by IP**.
2. On the **Global restrictions** tab, enter the address of the page to which the user is redirected to if they are not allowed to log in, in the Login denied error page.
3. Select one of the following options:
  - To restrict access to a role by IP address, complete the following steps:
    - Click Restrict role by IP.
    - Decide which role you want to restrict, the roles that you can restrict include Administrator, Content Author, and Forum Moderator.
    - Enter the IP address range (in CIDR notation) that you do not want to restrict log in for in the field for that role, for example, Forum Moderator role IP range.
    - Click Save configuration.

**Restrict role by IP** ☆

General Settings Restrict login by IP Restrict role by IP

Enter IP Address Ranges in CIDR Notation separated with semi-colons, with no trailing semi-colon.  
For more information on CIDR notation click [here](#).  
Leave field blank to disable IP restrictions for Superuser.

Save configuration

- To restrict login access of a user by IP address, complete the following steps:
  - Click Restrict login by IP, then click **User restrictions**.

- In the **ADD NEW USER ALLOWED IP RANGE** section, enter a user name in the **Username** field.
- Enter an IP address Range (in CIDR notation), that you do not want to restrict log in for in the **Allowed IP range** field.
- Click Save configuration. Your new log in restriction can be seen after the **ADD NEW USER ALLOWED IP RANGE** section.

## Restrict login by IP

General Settings

Restrict login by IP

Restrict role by IP

Global Restrictions

User restrictions

Home » Administration » Configuration » People » Restrict By IP » Restrict login by IP

✓ The configuration options have been saved.

### ADD NEW USER ALLOWED IP RANGE

Username

Allowed IP range

Enter IP Address Ranges in CIDR Notation separated with semi-colons, with no trailing semi-colon. E.G. 10.20.30.0/24;192.168.199.1/32;1.0.0.0/8  
For more information on CIDR notation click [here](#).

### apicdemo1 user IP range

10.20.30.0/24;192.168.199.1/32

Enter IP Address Ranges in CIDR Notation separated with semi-colons, with no trailing semi-colon. E.G. 10.20.30.0/24;192.168.199.1/32;1.0.0.0/8  
For more information on CIDR notation click [here](#).

Leave field blank to disable IP restrictions for apicdemo1.

Save configuration

- To restrict login for all users, complete the following steps:
  - Click Restrict login by IP, then click **Global restrictions** tab.
  - Enter the global IP address ranges (in CIDR notation) in the Restrict global login to allowed IP range field.
  - Click Save configuration.

4. To remove an IP restriction, delete the value that is associated with the restriction, then click Save configuration.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Restricting or preventing access from search engines

You can restrict or prevent access to your Developer Portal from search engines. You might want to control the access if you have a development or test site.

### Before you begin

You must have administrator access to complete this task.

### About this task

You might have a development or test Developer Portal site on the internet, but do not want them to be indexed by Google, or other search engines, making them visible to your customers. Google explicitly advises not to use `robots.txt` as a blocking mechanism. A correct solution is to control access by using Metatag.

### Procedure

1. In the Developer Portal, click Configuration, Search and metadata, Metatag.
2. On the **Global restrictions** tab, click Edit.
3. In the Advanced section, select the meta tags that you want to use to restrict or prevent the access:

## Robots

- index – Allow search engines to index this page (assumed).
- follow – Allow search engines to follow links on this page (assumed).
- noindex – Prevents search engines from indexing this page.
- nofollow – Prevents search engines from following links on this page.
- noarchive – Prevents cached copies of this page from appearing in search results.
- nosnippet – Prevents descriptions from appearing in search results, and prevents page caching.
- noodp – Blocks the [Open Directory Project](#) description from appearing in search results.
- noydir – Prevents Yahoo! from listing this page in the [Yahoo! Directory](#).
- noimageindex – Prevent search engines from indexing images on this page.
- notranslate – Prevent search engines from offering to translate this page in search results.

Provides search engines with specific directions for what to do when this page is indexed.

4. Click Save.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## toggling the site in and out of maintenance mode

You can put the Developer Portal site into maintenance mode for short periods of time. During maintenance mode only an administrator is able to access the site, and all other users who enter the site URL get a maintenance message set by the administrator.

### Before you begin

You must have administrator access to complete this task.

**Important:** Maintenance mode is designed for short-term site maintenance; it is not meant for long-term usage. While a site is in maintenance mode, the database is not updated with new content from API Manager.

### Procedure

To put the site into maintenance mode, complete the following steps:

1. Click Configuration in the administrator dashboard.
2. Under the DEVELOPMENT heading, click Maintenance mode.
3. Select the Put site into maintenance mode check box.
4. Enter a site message or, alternatively, leave the default site maintenance text.  
This message is what will be seen by those who visit the site while it is in maintenance mode.
5. Click Save configuration.  
Your site is now in maintenance mode.

To take the site out of maintenance mode, complete the following steps:

6. Enter your site URL in a web browser by using the following format: `https://my_site_url/user/login`.
7. Log in to your site as the admin user.
8. Click Configuration in the administrator dashboard.
9. Under the DEVELOPMENT heading, click Maintenance mode.
10. Clear the Put site into maintenance mode check box.  
Your site is now available to users and out of maintenance mode.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Viewing available updates

You can view available updates in the Developer Portal.

## Before you begin

---

You must have administrator access to complete this task.

## Procedure

---

To view available updates, complete the following steps:

1. Click Reports in the administrator dashboard.
2. Click Available updates.
3. You can see what updates are available from this view. However, updates can be applied only by applying the latest available API Connect release; see [Upgrading in a Kubernetes environment](#), or [Upgrading in a VMware environment](#), for more information.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Managing Developer Portal security

---

You can manage multiple security elements in the Developer Portal.

- [Configuring CAPTCHA](#)  
You can add a CAPTCHA challenge to any of your Developer Portal pages to protect your site from spam.
- [Configuring reCAPTCHA](#)  
You can configure reCAPTCHA on your Developer Portal site to provide more protection from spam and abuse.
- [Configuring session timeout and limit](#)  
You can specify session timeout settings to control when a user is automatically logged out of the Developer Portal. You can also restrict the number of sessions a single user has available to them.
- [Configuring the timeout length for the password reset link](#)  
You can configure the timeout length for the one-time password reset link that is sent from the Developer Portal to the admin user account.
- [Configuring your site password policy](#)  
You can configure your site password policy to define the constraints that are applied to the passwords of your Developer Portal users.
- [Disabling CORS warnings](#)  
You can disable cross-origin resource sharing (CORS) warnings for unenforced APIs in the Developer Portal.
- [Disabling live testing of APIs](#)  
You can disable live testing of APIs in the Developer Portal to restrict exposure of an API.
- [How to enable penetration testing, and information about Developer Portal cookies](#)  
Many security features are available in the Developer Portal, but if you need to do a penetration test of your Developer Portal site, some of these features might block the scan that is required as part of the testing. This topic provides guidance on the security features that you might need to disable to allow penetration testing of your site, as well as information about Developer Portal cookies.
- [How to manage IP security in the Developer Portal](#)  
The Developer Portal offers the ability to perform various IP address security measures, such as adding and removing specific IP addresses from the banned IP address list, automatically banning client IP addresses by using the Drupal Perimeter Defence module, or managing login security by using flood control.
- [Managing banned IP addresses](#)  
You can ban specific IP addresses from accessing your Developer Portal site.
- [Using flood control for login security](#)  
You can configure login security for your Developer Portal by using flood control.
- [Login security](#)  
You can configure the login security for your Developer Portal at an IP and user level. You can also configure login security for Developer Portal contact forms.
- [Using the Security kit](#)  
You can improve the security of your website by configuring various options that are available in the Security Kit module, in the Developer Portal.
- [Using Honeypot for spam protection](#)  
Honeypot protection provides security mechanisms to protect your Developer Portal site from form submission by spam bots. If spam bot activity is detected, form submission is blocked.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Configuring CAPTCHA

You can add a CAPTCHA challenge to any of your Developer Portal pages to protect your site from spam.

## Before you begin

---

You must have administrator access to complete this task.

## About this task

---

The types of CAPTCHA challenges that are available include Image and Math based CAPTCHAs. Both types of CAPTCHA challenges are configurable in the CAPTCHA dialog box. By default, your Developer Portal site is configured with the Image based CAPTCHA challenge enabled. You can also configure reCAPTCHA on your site. For more information, see [Configuring reCAPTCHA](#).

---

## Procedure

To configure CAPTCHAs, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration in the administrator dashboard.
3. In the PEOPLE section, click CAPTCHA module settings.  
The CAPTCHA settings window opens.
4. Use the CAPTCHA configuration options provided as required. For example, you can complete the following tasks:
  - a. Specify the CAPTCHA challenge type.
  - b. Specify which forms must include a CAPTCHA challenge.
  - c. Add a description to the CAPTCHA.
  - d. Enable CAPTCHA statistics.
5. Click Save configuration to save your changes.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Configuring reCAPTCHA

You can configure reCAPTCHA on your Developer Portal site to provide more protection from spam and abuse.

---

### Before you begin

You must have administrator access to complete this task.

---

### About this task

reCAPTCHA is a CAPTCHA-like system that is designed to establish that a computer user is human. The types of reCAPTCHA that are available include Checkbox, Invisible, and Android.

Note: To use reCAPTCHA the administrator of your Developer Portal is required to sign up to Google's reCAPTCHA API, and your portal server must have internet access.

---

## Procedure

To configure reCAPTCHA, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration > People > CAPTCHA module settings > reCAPTCHA in the administrator dashboard.  
The reCAPTCHA settings window opens.
3. In the GENERAL SETTINGS section, click register for reCAPTCHA.  
The Google registration site for reCAPTCHA is displayed.
4. Follow the instructions on Google to register your Developer Portal site, and obtain the Site key and Secret key.
5. Return to the reCAPTCHA settings window in the Developer Portal, and enter the Site key and Secret key that you obtained from Google into the GENERAL SETTINGS section.
6. Optional: Update the WIDGET SETTINGS section as required.
7. Click Save configuration to save your changes.
8. Click the CAPTCHA Settings tab, and in the FORM PROTECTION section change the Default challenge type to reCAPTCHA (from module reCAPTCHA).
9. Click Save configuration.

---

## Results

The reCAPTCHA module is now enabled on your Developer Portal site.

---

## Related tasks

- [Configuring CAPTCHA](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Configuring session timeout and limit

You can specify session timeout settings to control when a user is automatically logged out of the Developer Portal. You can also restrict the number of sessions a single user has available to them.

## Before you begin

---

You must have administrator access to complete this task.

## Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. To manage the automated logout settings, complete the following steps:
  - a. Click Configuration in the administrator dashboard.
  - b. In the PEOPLE section, click Automated logout settings.

Note: You must check **Enforce auto logout on admin pages** for **autoLogout** to apply when navigating the admin areas of the site.

Enforce auto logout on admin pages

If checked, then users will be automatically logged out when administering the site.

**Save configuration**

- c. Use the session timeout configuration options provided as required. For example, you can complete the following tasks:
    - Specify the length of inactivity time, in seconds, before a user is automatically logged out.
    - Specify session timeout values for individual user roles.  
Note: The default session timeout is 30 minutes.
    - Provide a redirection URL at logout.
    - Provide session expiry message texts.
  - d. Click Save configuration to save your changes.
3. To restrict the number of sessions available to a user, complete the following steps:
    - a. Click Configuration in the administrator dashboard.
    - b. In the PEOPLE section, click Session limit.
    - c. Specify the default maximum number of sessions for a user by entering the number into the Default maximum number of active sessions field.
    - d. Select the required action from the When the session limit is exceeded options.
    - e. From the Logged out message severity list, select the severity of the message that the user receives when they are logged out.
    - f. Optionally, in the ROLE LIMITS section, specify separate session limits for each role.
    - g. Click Save configuration to save your changes.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Configuring the timeout length for the password reset link

You can configure the timeout length for the one-time password reset link that is sent from the Developer Portal to the admin user account.

## Before you begin

---

You must have administrator access to complete this task.

## About this task

---

By completing the steps in this task, you are configuring the timeout length for the one-time password reset link that is sent to the admin user account by the Developer Portal.

Note:

- Setting the password reset timeout length in the Developer Portal affects only the admin user account.
- You are not affecting the user activation or password reset links that are used by any other identification provider type in API Manager.

## Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration in the administrator dashboard.
3. In the PEOPLE section, click Account settings.  
The Account settings window opens.
4. In the Account settings window, navigate to the PASSWORD RESET TIMEOUT section.
5. Enter your required value for the timeout in the Password Reset Timeout field.  
Note: The timeout value is specified in seconds, and is 86400 seconds by default.
6. Click Save configuration.  
You have configured the timeout length for the one-time link that is sent from the Developer Portal for the admin user account.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Configuring your site password policy

You can configure your site password policy to define the constraints that are applied to the passwords of your Developer Portal users.

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

Any passwords that are stored in the API Manager must comply with the API Manager password policy. You can configure your password policy to be the same as or stricter than the API Manager password policy.

### Procedure

---

To configure your site password policy, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration in the administrator dashboard.
3. In the SECURITY section, click Password Policy.  
The Password Policies page opens.
4. In the OPERATIONS column for the default password policy, click Edit.  
Note: You can create a new password policy by clicking Add Policy; this allows you to apply different password policy settings to different roles. If you need only a single password policy, just configure the pre-supplied default policy.
5. Click Next.  
The Configure Constraints page opens.
6. Configure the password constraints as required.
  - a. To configure a constraint, click Edit in the OPERATIONS column for the required constraint.
  - b. To delete a constraint, select Delete in the OPERATIONS column.
  - c. To add a constraint, select the required constraint type from the drop-down list, then click Configure Constraint Settings.
  - d. When you are done, click Next.  
The Apply to Roles page opens.
7. Select the roles to which the password policy settings are to be applied. then click Finish.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Disabling CORS warnings

You can disable cross-origin resource sharing (CORS) warnings for unenforced APIs in the Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

By disabling the CORS warnings, users will not receive further warnings regarding the usage of unenforced APIs.

### Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration in the administrator dashboard.
3. In the SYSTEM section, click IBM API Connect.
4. Ensure that the Display CORS warnings for unenforced APIs check box is cleared.
5. Click Save Configuration.  
You have disabled CORS warnings in the Developer Portal. To enable CORS warnings, repeat the steps and ensure that the Display CORS warnings for unenforced APIs check box is selected.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Disabling live testing of APIs

You can disable live testing of APIs in the Developer Portal to restrict exposure of an API.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration in the administrator dashboard.
3. In the SYSTEM section, click IBM API Connect.
4. Ensure that the Allow live testing of APIs check box is cleared.
5. Click Save configuration.

You have disabled live testing of APIs. To enable live testing of APIs, repeat the steps and ensure that the Allow live testing of APIs check box is selected.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## How to enable penetration testing, and information about Developer Portal cookies

Many security features are available in the Developer Portal, but if you need to do a penetration test of your Developer Portal site, some of these features might block the scan that is required as part of the testing. This topic provides guidance on the security features that you might need to disable to allow penetration testing of your site, as well as information about Developer Portal cookies.

Penetration testing, or pen testing, is the practice of testing a computer system, network, or web application for potential security vulnerabilities that an attacker might exploit. For certain elements of your pen testing, you might want to disable some of the security features that block scanning of the Developer Portal. The following sections describe the security features in the Developer Portal that you might need to disable. The actual requirements depend on your Developer Portal configuration, and on the type of pen testing that you are running. Note also the final section, which discusses testing for Distributed Denial of Service attacks.

Important:

- If you run a pen test, and you give the automated test tool the admin credentials, the tool submits all of the administration configuration forms as well, and this action is likely to break the Portal site configuration. Best practice is to use different credentials for the testing.
- If you disable security modules, and then run security scans, your Portal site configuration might be broken by the scanning process. Before running any security testing, ensure that you have a valid backup of your Portal site.
- If your Portal site configuration is broken by the security testing, then you must delete the Portal site from the API Manager Catalog settings and re-create it, or restore it from a backup.

For information about restoring your site, see the appropriate topic for your environment:

- [Backing up and restoring the Developer Portal in a Kubernetes environment](#)
- [Backing up and restoring the Developer Portal on OpenShift and Cloud Pak for Integration](#)
- [Backing up and restoring the Developer Portal in a VMware environment](#)
- Note that disabling of security modules makes it highly likely that you will find issues that are not actually vulnerabilities, because you have disabled the modules that are designed to protect against these vulnerabilities. Therefore, any issue that is found in these circumstances must be replicated in an environment without the security modules disabled, before contacting IBM Support.
- Do not use the **Enforced** mode of the **Content Security Policy**, this mode is not supported and can break core Developer Portal functionality such as API rendering and the content editor. The **Content Security Policy** must be in **Report only** mode.

Note: You might need to disable the **Honeypot** module to allow your penetration test to run. For more information, see [Using Honeypot for spam protection](#).

This topic contains the following sections:

- [CAPTCHA and reCAPTCHA verifications](#)
- [Drupal Perimeter Defense module](#)
- [Login Security module](#)
- [Developer Portal cookies](#)
- [Should I test the Developer Portal for vulnerability to Distributed Denial of Service attacks?](#)

---

### CAPTCHA and reCAPTCHA verifications

CAPTCHA and reCAPTCHA verifications are a type of challenge-response test that are used in web applications to check whether the user is human. By default, your Developer Portal site is configured with an Image based CAPTCHA challenge enabled, but you can also configure a Math based CAPTCHA challenge, and Checkbox, Invisible, and Android reCAPTCHA challenges. If you need to disable these verifications before pen testing, see the following instructions.

To disable the CAPTCHA and reCAPTCHA verifications, you must disable the modules as follows:

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. On the administrator dashboard, click **Extend > Disable module**.
4. Search through the list of modules, and select the check boxes next to the Image CAPTCHA and reCAPTCHA modules.
5. Click Disable, and click Disable again to confirm.

6. On the Disable tab, select the check box next to the CAPTCHA module, and click Disable. The display shows the forms that the CAPTCHA configuration is removed from.
7. Click Disable again to confirm. Note that the modules must be disabled in this order.

The CAPTCHA and reCAPTCHA modules are now disabled, and you can complete your pen testing. After pen testing, you can enable the modules again by clicking Extend on the administrator dashboard, selecting the check box for each module in the List tab, and clicking Enable.

## Drupal Perimeter Defense module

---

The Drupal Perimeter Defense module (machine name: perimeter) immediately bans the IP addresses of those users that send suspicious requests to your site, so any pen testing scans would be blocked. This module is enabled by default on the Developer Portal. For more information about the module, see the Drupal documentation [Drupal Perimeter Defense module](#).

If you need to disable the Drupal Perimeter Defense module before pen testing, see the following instructions:

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. On the administrator dashboard, click Extend, Disable module.
4. Search through the list of modules, and select the check box next to the Drupal Perimeter Defense module.
5. Click Disable, and click Disable again to confirm.

The Drupal Perimeter Defense module is now disabled, and you can complete your pen testing. After pen testing, you can enable the module again by clicking Extend on the administrator dashboard, selecting the check box next to the Drupal Perimeter Defense module in the List tab, and clicking Enable.

## Login Security module

---

The Login Security module (machine name: login\_security) enables the site administrator to improve the security options in the login operation of your Developer Portal site. For example, controlling the number of invalid login attempts before blocking users, and denying access by IP address. This module is enabled by default on the Developer Portal. For more information about the module, see the Drupal documentation [Login Security module](#).

If you need to disable these security options before pen testing, you need to manually modify the configuration of your security options according to your requirements. For example, you might need to change the number of login attempts that are allowed before a user or IP address is blocked. To configure the security options, see the following instructions:

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. On the administrator dashboard, click Configuration, People, Login Security.
4. In the Login Security window, update the security options according to your requirements.
5. Click Save configuration to save your updates.

The Login Security options are now updated, and you can complete your pen testing. After pen testing, you can reconfigure your security options in the Login Security window.

## Developer Portal cookies

---

Cookies are small text files that are placed on a computer by websites when they are visited. The Developer Portal uses cookies that remain on the computer for varying times. Some cookies expire at the end of each session, and some remain longer to enhance the user experience in the future. The list here explains the cookies that are used by the Developer Portal, and why they are used.

Note: Any load balancer that sits in front of the Developer Portal must be a transparent proxy that enables all cookies returned by the Developer Portal to pass through to the browser.

### Drupal session identifier cookie

This is the main cookie that all of the Developer Portal sites have, and it stores the session identification. The session cookie is named in the format `SSESSUUID`, where `UUID` is a randomly generated unique string of characters for that session, and this is the session token itself. The session cookie is always marked with the following flags as instructions to the browser client:

- **Secure** - means that the cookie is sent only over a secure connection (that is, over TLS).
- **HttpOnly** - means that the browser adds this cookie on outbound requests only, and not provide the value to client side javascript.

### session\_store.id cookie

This cookie is used to store information on where a user is in the subscription flow, and any options that they selected, if they haven't yet signed in, so the Developer Portal can redirect them back there later. The session\_store.id cookie is also marked with the **Secure** and **HttpOnly** flags, and it does not contain any confidential information.

### Drupal.visitor.startSubscriptionWizard cookie

This cookie is used to store information on where a user started in the subscription flow if they haven't yet signed in, so the Developer Portal can redirect them back there later. The Drupal.visitor.startSubscriptionWizard cookie is also marked with the **Secure** and **HttpOnly** flags, and it does not contain any confidential information.

### portal\_web cookie

This cookie is used to achieve session persistence, which it does by ensuring that web traffic between the user and the Developer Portal is correctly routed to the server. The portal\_web cookie is used for both HTTP and HTTPS communications, so that routing is meaningful irrespective of the transfer protocol, and ensuring consistent behavior if the switching of protocols is required. The cookie contains only a hash of the pod that served the traffic to maintain session persistence, and does not contain any confidential information. The cookie is provided by the Portal ingress. This cookie is not marked as **Secure** or **HttpOnly**, as the Kubernetes ingress does not yet support these attributes.

### Other cookies

In addition to the cookies listed previously, there are other (usually temporary) cookies that might be created depending on the configuration options of your Developer Portal site. For example, if the site uses OAuth for authentication, then during the OAuth token activation flow a JSON Web Token is sent to the browser. This token is stored in a cookie for a limited lifetime. This action is part of the normal function of an OAuth flow. As the creation of these other cookies depends on your particular Developer Portal configuration, we cannot provide a complete list of cookies here.

## Should I test the Developer Portal for vulnerability to Distributed Denial of Service attacks?

---

When you run penetration testing, it's important to understand that individual systems are not responsible for (nor capable of dealing with) Distributed Denial of Service (DDoS) attacks. DDoS attacks are launched by huge numbers of external computers simultaneously, with a goal of using up all of the resources of a system, and thereby denying service to legitimate users. These kinds of attacks are usually defended against at the level of the network and edge gateways, and information about how to protect against them is out of the scope of this topic. Although the Developer Portal does have some capabilities, including the modules mentioned previously, for potentially mitigating some of the effects of a DDoS attack, do not rely on these capabilities as the first line of defense; rather they are designed to assist in dealing only with any elements of an attack that might have gotten through the outer network layers of protection.

## How to manage IP security in the Developer Portal

The Developer Portal offers the ability to perform various IP address security measures, such as adding and removing specific IP addresses from the banned IP address list, automatically banning client IP addresses by using the Drupal Perimeter Defence module, or managing login security by using flood control.

See the following links for information about how to manage IP security in the Developer Portal:

- [Enable and disable IP security](#)
- [Correctly passing through client IP addresses](#)
- [Managing banned IP addresses](#)

### Enable and disable IP security

---

The ability to enable or disable IP security related actions can be controlled at the Portal service level by using the Developer Portal CLI command `ip-security-enabled`. When IP security is enabled, modules such as the Drupal Perimeter Defence module, or flood control, will block client IP addresses suspected of malicious behavior, as expected. When IP security is disabled, all IP related security is switched off. For example, the perimeter module won't block client IP addresses when IP security is disabled. You might want to turn off IP security if you are performing penetration tests, or if you cannot pass through the client IP address from your external load balancer. For more information, see [Using the ip-security-enabled command](#).

### Correctly passing through client IP addresses

---

In order to correctly use modules that make use of client IP banning, such as the Drupal Perimeter Defence module, you must ensure that any external load balancer that fronts the Portal cluster passes through the client IP address. This can be achieved by passing the client IP address through in an `'x-forwarded-for'` header, or by making use of the proxy protocol (provided both the load balancer and the ingress controller are compatible with the proxy protocol, and have the protocol enabled). Failure to correctly pass through the client IP address, results in the load balancer IP address being blocked when a client attempts to send a suspicious request to the portal.

If you are fronting the Portal cluster with an HAProxy setup acting as the load balancer, then you can make use of the proxy protocol by adding the `send-proxy` directive to the end of the Portal server declarations in the HAProxy configuration file, for example:

```
server portal0 portal_host:port check send-proxy
```

You must restart the HAProxy for the change to take effect. Note that if your load balancer IP address has already been blocked, you will need to remove the blocked IP address from the banned list by using the `security` command in the Developer Portal CLI, see [Using the security command](#).

For more information about the Drupal Perimeter Defence module, see [Drupal Perimeter Defense module](#).

### Managing banned IP addresses

---

You can manage banned IP addresses for a particular site by using the administrator dashboard for a particular Developer Portal site. For more information, see [Managing banned IP addresses](#).

### Related concepts

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Managing banned IP addresses

You can ban specific IP addresses from accessing your Developer Portal site.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

To manage banned IP addresses, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration in the administrator dashboard.
3. In the PEOPLE section, click IP address bans.  
The IP address bans window opens.
4. You can complete the following tasks:
  - a. To ban an IP address, enter the address in the IP address field, then click Add.  
The address is added to the BANNED IP ADDRESSES list.
  - b. To remove an IP address from the banned list, click Delete alongside the required address.

Note:

- There is automatic login "flood" protection built into the Developer Portal. This feature means that an excess of login attempts from the same IP address in one hour will cause that IP to be temporarily banned. For more information, see [Using flood control for login security](#).
- You can also clear banned user/IP addresses by using the Developer Portal CLI command `security:clear-bans`. For more information, see [Using the security command](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using flood control for login security

You can configure login security for your Developer Portal by using flood control.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Navigate to Configuration > System > Flood Control.
3. Enter values in the following fields in the LOGIN SETTINGS section according to your requirements:
  - Failed IP login limit (min 1) - the number of failed login attempts from the same client IP.
  - Failed IP login window in seconds (0 = Off) - the time window, in seconds, for the number of failed login attempts from the same client IP.
  - Failed User login limit (min 1) - the number of failed login attempts from a user.
  - Failed User login window in seconds (0 = Off) - the time window, in seconds, for the number of failed login attempts from a user.
4. Enter values in the following fields in the CONTACT FORM section according to your requirements:
  - Emails sent limit - the number of emails that can be sent.
  - Emails sent window in seconds - the time window, in seconds, for the number of emails that can be sent.
5. Click Save configuration.

### What to do next

---

To unblock a user, see [Blocking and unblocking specific users](#). To unblock an IP address, see [Managing banned IP addresses](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Login security

You can configure the login security for your Developer Portal at an IP and user level. You can also configure login security for Developer Portal contact forms.

### Before you begin

Important: The Login Security module is being removed from future releases. It has been replaced by Flood Control. Existing users of the Login security module should configure Flood Control with the same limits and time windows as specified here. For more information, see [Using flood control for login security](#). You must have administrator access to complete this task.

### Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration in the administrator dashboard.
3. In the PEOPLE section, click Login Security.
4. Enter values in the following fields in the GENERAL SETTINGS section according to your requirements:
  - Track time - the time window to check for security violations.
  - User - the number of login failures before blocking a user.
  - Soft host - the number of login failures before soft blocking a host. The host can still browse the site as an anonymous user.
  - Host - the number of login failures before hard blocking a host. The host cannot access the site at all.
  - Attack detection - the number of login failures before warning about an ongoing attack.
5. Select the check boxes that satisfy your notification requirements in the NOTIFICATION section:
  - Disable login failure error message
  - Notify the user about the number of remaining login attempts
  - Display last login timestamp
  - Display last access timestamp
6. Optional: Edit the EMAIL FOR ONGOING ATTACK DETECTION section.
7. Optional: Edit the EMAIL FOR BLOCKED ACCOUNT section.
8. Optional: You can edit the notification texts that are displayed by configuring the following options:
  - Failed login attempt
  - Banned host (soft IP ban)
  - Banned host (hard IP ban)
  - Blocked user by uid
9. After you have configured your login security options, click Save configuration.

### What to do next

To unblock a user, see [Blocking and unblocking specific users](#). To unblock an IP address, see [Managing banned IP addresses](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the Security kit

You can improve the security of your website by configuring various options that are available in the Security Kit module, in the Developer Portal.

### Before you begin

You must have administrator access to complete this task.

### About this task

The Security Kit module provides your website with various options to mitigate risks of common web application vulnerabilities like Cross-site Scripting, Cross-site Request Forgery and Clickjacking. It also has some options to improve your SSL/TLS security.

### Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration in the administrator dashboard.
3. In the SYSTEM section, click Security Kit settings.
4. In the Security Kit module, configure the security settings for your website as required.
5. When you are done, click Save configuration.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using Honeypot for spam protection

Honeypot protection provides security mechanisms to protect your Developer Portal site from form submission by spam bots. If spam bot activity is detected, form submission is blocked.

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

Honeypot protection provides the following security mechanisms:

- A hidden field, unseen by users, is added to the form. If a value has been entered in the field when the form is submitted then this indicates that the form was completed by a spam bot, and the submission is blocked. You can specify the name of the hidden field.
- If the form is submitted before a specified time has elapsed (five seconds by default), it is assumed that this is too short a time for a human to have completed the form, and the submission is blocked. You can specify the time length.

Honeypot protection is provided by the Honeypot module, which is enabled by default.

Note: If you want to carry out automated testing of your Developer Portal, you might need to disable the Honeypot module, because Honeypot spam protection is designed specifically to block automated Developer Portal usage. For details on how to disable a module, see [Disabling modules](#).

### Procedure

---

To configure Honeypot for spam protection in the Developer Portal, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration in the administrator dashboard.
3. In the CONTENT AUTHORING section, click Honeypot configuration.
4. Specify the forms that you want to protect with Honeypot.
  - a. To enable Honeypot protection for all the forms on your Developer Portal site, select Protect all forms with Honeypot.
  - b. To choose which forms you want to protect with Honeypot, clear the Protect all forms with Honeypot check box, then select the required forms in the HONEYPOT ENABLED FORMS section.By default, Honeypot protection is enabled for all user management forms and all comment forms.
5. To have details of all blocked form submissions written to the log file, select Log blocked form submissions.
6. In the Honeypot element name field, specify the name of the hidden form field.

The default field name is url. You need to change the value if your form already has a field of the same name. For the most effective protection, use a generic field name; for example, email, homepage, or link.
7. In the Honeypot time limit field, specify the number of seconds that must elapse before it is assumed that a form is being submitted by a human rather than a spam bot. If the form is submitted before this time has elapsed then the submission is blocked.

The default value is five seconds.
8. When done, click Save configuration.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## People

You can manage and customize the user experience in the Developer Portal, by altering permissions and assigning roles to specific users.

To learn how to configure the user experience for your Developer Portal site, use the following section links.

- [Blocking and unblocking specific users](#)  
You can block and unblock specific users in the Developer Portal.
- [Controlling access to Developer Portal content](#)  
In IBM® API Connect, you can restrict access to content for Consumer organizations through an access content list. However, you can also assign permissions in the Developer Portal that override the access content list, and allow users to access and edit all of the content for Products, APIs, and Applications.
- [Creating a developer account to customize API properties](#)  
You can allow specific users in the Developer Portal to customize the properties for certain APIs, including APIs that are not viewable by the administrator, or other customizable features, by creating an internal Consumer organization.
- [Email Subscribers](#)  
As a site administrator, you can use the email subscribers wizard to send messages to your Developer Portal community.
- [How to style the Developer Portal emails](#)  
You can apply a theme to the HTML emails that are sent by the Developer Portal by using CSS and templating.
- [Working with roles in the Developer Portal](#)  
As a site administrator, you can create and customize site configuration roles in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Blocking and unblocking specific users

You can block and unblock specific users in the Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

To block or unblock a specific user, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click People in the administrator dashboard.  
A list of users is displayed.
3. Select the check box next to the target user.
4. From the drop-down list under Action, select Block the selected user(s) or Unblock the selected user(s).
5. Click Apply to selected items.

You have blocked or unblocked specific users from the Developer Portal.

Note: If a user reports that they are unable to login, but they do not appear as blocked, then it might be that they have been blocked by Flood Control. To unblock such users, select Configuration > System > Flood unblock. You can configure your Flood Control settings; see [Using flood control for login security](#) for more information.

### Related tasks

---

- [Using flood control for login security](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Controlling access to Developer Portal content

In IBM® API Connect, you can restrict access to content for Consumer organizations through an access content list. However, you can also assign permissions in the Developer Portal that override the access content list, and allow users to access and edit all of the content for Products, APIs, and Applications.

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

A user with a Content Author role is a curator of content for the Developer Portal. A Content Author user can perform the following actions:

- Set taxonomies on the content
- Provide custom icons for content
- Upload additional documentation files
- Create documentation pages in the Developer Portal.

By default, Content Author users are assigned the following user permissions:

Edit any Product content

The user can access and edit all of the Products available in the Catalog that the Developer Portal is associated with. The user can also access APIs that belong to those Products.

Edit any API content

The user can access and edit all of the APIs that are available in the Catalog, but not the Products with which they are associated. (Note that this permission is a subset of Edit any Product content; as Content Author users are assigned both permissions they can access and edit all of the Products and the associated APIs that are available.)

The Edit any Application permission grants the user access to all of the Applications that are in the Developer Portal, but is not assigned to any user or role by default.

Note: There are security implications if you grant the Edit any Application permission, and it should be assigned only to trusted roles.

A user can configure, attach, and upload content if they are assigned the appropriate permissions.

### Procedure

---

To check and assign permissions that grant users access to all content, proceed with one of the following options:

- Assign a user to the Content Author role. For more information, see [Assigning users to a role](#).
- Create a custom role, to which you can add the relevant permissions and add users to your new custom role. For more information, see [Creating a new role](#), [Assigning permissions to a role](#), and [Assigning users to a role](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Creating a developer account to customize API properties

You can allow specific users in the Developer Portal to customize the properties for certain APIs, including APIs that are not viewable by the administrator, or other customizable features, by creating an internal Consumer organization.

---

### Before you begin

You must have administrator access to complete this task.

---

### About this task

Every user in the Developer Portal must be a member of a Consumer organization. To enable additional users to be editors of particular content in the Developer Portal, you can create an internal Consumer organization. You can then invite these additional editors to this organization, and assign them a specific role that grants certain editing permissions. For example, the following API properties can be customized by any member of the new Consumer organization that have been assigned the Administrator or Content Author role:

- Image uploading
- Tag assignment
- File attachment
- Custom field editing

---

### Procedure

To create a new Consumer organization within the Developer Portal, complete the following steps:

1. Log in to the Developer Portal as an administrator or Content Author.
2. Click the arrow next to `your_organization_name` from the Developer Portal home page, and select Create organization.
3. In the Organization Title field, type the name of the organization that you want, then click Submit.

To invite the editor users to your new organization, complete the following steps:

4. Switch to your newly created organization by clicking the arrow next to `your_current_organization_name`, and select your new organization name from the list.
5. Click the arrow next to `your_new_organization_name` and select My organization. Your new organization page is displayed.
6. For each new user, click Invite, complete their Email details, and click Submit. Note that you can leave the default role of Developer selected and then change the role later, or you can select the Administrator role now. However, be aware that an administrator is able to perform any task within the Developer Portal that does not involve the creation of APIs, Products, and Apps. You should be careful to ensure that only trusted users are given this access and level of control of your site. Each new user will receive an invitation email, and they need to click on the link in the email to activate their Developer Portal account.

To assign the required permissions to the users of your organization, you must log in as an administrator and complete the following steps:

7. Log in to the Developer Portal as an administrator.
8. If the administrator dashboard is not displayed, click Manage to display it.
9. Click People on the administrator dashboard.
10. Select the check box for the user, or users, to whom you want to give new permissions.
11. Under the Action heading, select the relevant role from the drop-down list. For example, selecting Add the Content Author role to the selected user(s) means they can edit images and content within the Developer Portal.
12. Click Apply to selected items to update the roles.

---

### What to do next

If you want specific Products or APIs to be customized by the editor users, you must ensure that the relevant Products are visible to the internal Consumer organization that you have created. For more information on how to make a plan visible in API Manager, see [Changing the availability of a Product](#).

Note that you can also create new roles and assign specific permissions to those roles. For more information, see [Creating a new role](#) and [Assigning permissions to a role](#).

---

### Related concepts

- [Working with roles in the Developer Portal](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Email Subscribers

As a site administrator, you can use the email subscribers wizard to send messages to your Developer Portal community.

You can email all the subscribers of a specific API, plan, product, or all registered consumer organizations. For each consumer organization, you can select whether to email just the owner or all of the members. Each recipient receives an individual email.

You can use the wizard to specify context-specific tokens in the email subject and body. The tokens available and their replacement values depend on which flow is selected, for example, API, plan, product, or all.

- [Emailing all subscribers](#)  
As a site administrator, you can use the email **All users** wizard to email all the subscribers of all the consumer organizations on your Developer Portal.
- [Emailing api subscribers](#)  
As a site administrator, you can use the email **API subscribers** wizard to send messages to all subscribers of all product plans that contain a specific API on your Developer Portal.
- [Emailing plan subscribers](#)  
As a site administrator, you can use the email **Plan subscribers** wizard to send messages to all subscribers of a chosen plan that belongs to a specific product on your Developer Portal.
- [Emailing product subscribers](#)  
As a site administrator, you can use the email **Product subscribers** wizard to send messages to all subscribers of any plan for a specific product in your Developer Portal.
- [Token reference](#)  
You can use the email subscribers wizard to specify context-specific tokens in the email subject and body. The tokens available and their replacement values depend on which flow is selected, for example, API, plan, product, or all.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Emailing all subscribers

As a site administrator, you can use the email **All users** wizard to email all the subscribers of all the consumer organizations on your Developer Portal.

---

## Before you begin

You must have administrator access to complete this task.

---

## About this task

You can use the **All users** wizard to send messages to all consumer organizations. You can select whether to email just the owner, or all of the members of the consumer organizations. Each recipient receives an individual email.

---

## Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Navigate to People > Email subscribers.
3. Select **All users**, and click Save.
4. Select the role of the recipients that you want to send the email to, then click Next.
  - **Owners** - sends the email to the relevant consumer organization owners.
  - **Members** - sends the email to all members of the relevant consumer organizations.
5. Enter the content of the email, subject, and body, and set the Text Format of the email:
  - Basic HTML
  - Plain text
6. Expand the REPLACEMENTS drop-down, and click Browse available tokens to view which tokens can be added to the subject and body fields for replacement. You can select a token to use by either typing it directly, or by clicking in the subject or body field. You are then given a list of available tokens, and you can insert the token that you want. For a reference list of tokens, see [Token reference](#).
7. Expand the ADDITIONAL EMAIL OPTIONS drop-down to configure any additional settings:
  - **Priority:** Set the priority of the email. Many email programs ignore a priority setting.
  - **Request receipt:** Request a read receipt from your emails. Many email programs ignore these requests so it is not a definitive indication of how many people read your email.
  - **Additional headers:** Set any additional headers to be sent with the email.
8. Use the remaining check boxes to configure what messages are to be sent and how:
  - Send the message directly by using the Batch API. This option sends the emails directly by the Batch API. If not selected, then the emails are added to the spool and sent out by cron.
  - Send a copy of all messages to the sender. Because emails might contain context-specific tokens, a new email is generated for each recipient with the correct token replacement. This option sends a copy of all generated emails to the sender.
  - Send a copy of the original message to the sender. This option sends a single copy of the original email, subject, and body, without the replacement of any specified tokens.
9. Click Next.
10. Confirm that the email is ready to send, then click Next.

11. If you chose to send the emails by the Batch API, you see a progress page that indicates how many emails were sent. You are then redirected to a summary page that shows the total number of emails that were sent.

If you chose to spool the delivery of the emails, you are redirected to the summary page that shows the total number of emails that are spooled.

12. Click Finish.

## Results

---

You successfully sent an email to all members, or all of the owners of each consumer organization on your Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Emailing api subscribers

As a site administrator, you can use the email **API subscribers** wizard to send messages to all subscribers of all product plans that contain a specific API on your Developer Portal.

## Before you begin

---

You must have administrator access to complete this task.

## About this task

---

You can use the email **API subscribers** wizard to send messages to all subscribers of all product plans that contain a specific API in your Developer Portal community. For each consumer org, you can select whether to email just the owner or all members. Each recipient receives an individual email.

## Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Navigate to People > Email subscribers.
3. Select **API subscribers**, and click Save.
4. In the text box, enter the name of the API whose subscribers you want to email. If you start typing in the text box, you can choose from the options that you are given. Click Next.
5. Select the role of the recipients that you want to send the email to, then click Next.
  - Owners - sends the email to the relevant consumer organization owners.
  - Members - sends the email to all members of the relevant consumer organizations.
6. Enter the content of the email, subject, and body, and set the Text Format of the email:
  - Basic HTML
  - Plain text
7. Expand the REPLACEMENTS drop-down, and click Browse available tokens to view which tokens can be added to the subject and body fields for replacement. You can select a token to use by either typing it directly, or by clicking in the subject or body field. You are then given a list of available tokens, and you can insert the token that you want. For a reference list of tokens, see [Token reference](#).
8. Expand the ADDITIONAL EMAIL OPTIONS drop-down to configure any additional settings:
  - **Priority:** Set the priority of the email. Many email programs ignore a priority setting.
  - **Request receipt:** Request a read receipt from your emails. Many email programs ignore these requests so it is not a definitive indication of how many people read your email.
  - **Additional headers:** Set any additional headers to be sent with the email.
9. Use the remaining check boxes to configure what messages are to be sent and how:
  - Send the message directly by using the Batch API. This option sends the emails directly by the Batch API. If not selected, then the emails are added to the spool and sent out by cron.
  - Send a copy of all messages to the sender. Because emails might contain context-specific tokens, a new email is generated for each recipient with the correct token replacement. This option sends a copy of all generated emails to the sender.
  - Send a copy of the original message to the sender. This option sends a single copy of the original email, subject, and body, without the replacement of any specified tokens.
10. Click Next.
11. Confirm that the email is ready to send, then click Next.
12. If you chose to send the emails by the Batch API, you see a progress page that indicates how many emails were sent. You are then redirected to a summary page that shows the total number of emails that were sent. If you chose to spool the delivery of the emails, you are redirected to the summary page that shows the total number of emails that are spooled.
13. Click Finish.

## Results

---

You successfully sent an email to all members or all owners of each consumer org that contained a subscription to all product plans that contain the chosen API on your Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Emailing plan subscribers

As a site administrator, you can use the email **Plan subscribers** wizard to send messages to all subscribers of a chosen plan that belongs to a specific product on your Developer Portal.

---

### Before you begin

You must have administrator access to complete this task.

---

### About this task

You can use the email **Plan subscribers** wizard to send messages to all subscribers of a chosen plan that belongs to a specific product on your Developer Portal community. For each consumer org, you can select whether to email just the owner or all members. Each recipient receives an individual email.

---

### Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Navigate to People, Email subscribers.
3. Select **Plan subscribers**, and click Save.
4. In the text box, enter the name of the product whose subscribers you want to email. If you start typing in the text box, you can choose from the options that you are given. Click Next.
5. Select the name of the plan whose subscribers you want to email. Click Next.
6. Select the role of the recipients that you want to send the email to, then click Next.
  - Owners - sends the email to the relevant consumer organization owners.
  - Members - sends the email to all members of the relevant consumer organizations.
7. Enter the content of the email, subject, and body, and set the Text Format of the email:
  - Basic HTML
  - Plain text
8. Expand the REPLACEMENTS drop-down, and click Browse available tokens to view which tokens can be added to the subject and body fields for replacement. You can select a token to use by either typing it directly, or by clicking in the subject or body field. You are then given a list of available tokens, and you can insert the token that you want. For a reference list of tokens, see [Token reference](#).
9. Expand the ADDITIONAL EMAIL OPTIONS drop-down to configure any additional settings:
  - **Priority**: Set the priority of the email. Many email programs ignore a priority setting.
  - **Request receipt**: Request a read receipt from your emails. Many email programs ignore these requests so it is not a definitive indication of how many people read your email.
  - **Additional headers**: Set any additional headers to be sent with the email.
10. Use the remaining check boxes to configure what messages are to be sent and how:
  - Send the message directly by using the Batch API. This option sends the emails directly by the Batch API. If not selected, then the emails are added to the spool and sent out by cron.
  - Send a copy of all messages to the sender. Because emails might contain context-specific tokens, a new email is generated for each recipient with the correct token replacement. This option sends a copy of all generated emails to the sender.
  - Send a copy of the original message to the sender. This option sends a single copy of the original email, subject, and body, without the replacement of any specified tokens.
11. Click Next.
12. Confirm that the email is ready to send, then click Next.
13. If you chose to send the emails by the Batch API, you see a progress page that indicates how many emails were sent. You are then redirected to a summary page that shows the total number of emails that were sent.  
If you chose to spool the delivery of the emails, you are redirected to the summary page that shows the total number of emails that are spooled.
14. Click Finish.

---

### Results

You successfully sent an email to all members or all owners of each consumer org that contained a subscription to the chosen plan within the chosen product, on your Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Emailing product subscribers

As a site administrator, you can use the email **Product subscribers** wizard to send messages to all subscribers of any plan for a specific product in your Developer Portal.

---

### Before you begin

You must have administrator access to complete this task.

## About this task

You can use the email **Product subscribers** wizard to send messages to all subscribers of any plan for a specific product in your Developer Portal community. For each consumer org, you can select whether to email just the owner or all members. Each recipient receives an individual email.

## Procedure

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Navigate to People > Email subscribers.
3. Select **Product subscribers**, and click Save.
4. In the text box, enter the name of the product whose subscribers you want to email. If you start typing in the text box, you can choose from the options that you are given. Click Next.
5. Select the role of the recipients that you want to send the email to, then click Next.
  - Owners - sends the email to the relevant consumer organization owners.
  - Members - sends the email to all members of the relevant consumer organizations.
6. Enter the content of the email, subject, and body, and set the Text Format of the email:
  - Basic HTML
  - Plain text
7. Expand the REPLACEMENTS drop-down, and click Browse available tokens to view which tokens can be added to the subject and body fields for replacement. You can select a token to use by either typing it directly, or by clicking in the subject or body field. You are then given a list of available tokens, and you can insert the token that you want. For a reference list of tokens, see [Token reference](#).
8. Expand the ADDITIONAL EMAIL OPTIONS drop-down to configure any additional settings:
  - **Priority**: Set the priority of the email. Many email programs ignore a priority setting.
  - **Request receipt**: Request a read receipt from your emails. Many email programs ignore these requests so it is not a definitive indication of how many people read your email.
  - **Additional headers**: Set any additional headers to be sent with the email.
9. Use the remaining check boxes to configure what messages are to be sent and how:
  - Send the message directly by using the Batch API. This option sends the emails directly by the Batch API. If not selected, then the emails are added to the spool and sent out by cron.
  - Send a copy of all messages to the sender. Because emails might contain context-specific tokens, a new email is generated for each recipient with the correct token replacement. This option sends a copy of all generated emails to the sender.
  - Send a copy of the original message to the sender. This option sends a single copy of the original email, subject, and body, without the replacement of any specified tokens.
10. Click Next.
11. Confirm that the email is ready to send, then click Next.
12. If you chose to send the emails by the Batch API, you see a progress page that indicates how many emails were sent. You are then redirected to a summary page that shows the total number of emails that were sent.  
If you chose to spool the delivery of the emails, you are redirected to the summary page that shows the total number of emails that are spooled.
13. Click Finish.

## Results

You successfully sent an email to all members or all owners of each consumer org that contained a subscription to any plan within the chosen product on your Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Token reference

You can use the email subscribers wizard to specify context-specific tokens in the email subject and body. The tokens available and their replacement values depend on which flow is selected, for example, API, plan, product, or all.

## Application Tokens

Tokens that are related to an individual Application.

Name	Token	Description	Product Subscribers	Plan Subscribers	API Subscribers	All Users
Description	[ <b>application:description</b> ]	The description that is given to the application.	✓	✓	✓	
Enabled	[ <b>application:enabled</b> ]	The state that the application is in.	✓	✓	✓	
ID	[ <b>application:id</b> ]	The ID of the application.	✓	✓	✓	
Image URL	[ <b>application:image_url</b> ]	The URL of the image for the application.	✓	✓	✓	
Lifecycle State	[ <b>application:lifecycle_state</b> ]	The lifecycle state of the application.	✓	✓	✓	
Name	[ <b>application:name</b> ]	The name of the application.	✓	✓	✓	
Title	[ <b>application:title</b> ]	The title of the application.	✓	✓	✓	

## Consumer Organization Tokens

Tokens that are related to the individual consumer organization.

Name	Token	Description	Product Subscribers	Plan Subscribers	API Subscribers	All Users
ID	[consumer-org:id]	The ID of the consumer organization.	✓	✓	✓	✓
Name	[consumer-org:name]	The name of the consumer organization.	✓	✓	✓	✓
Title	[consumer-org:title]	The title of the consumer organization.	✓	✓	✓	✓

## Product Tokens

Tokens that are related to an individual product.

Name	Token	Description	Product Subscribers	Plan Subscribers	API Subscribers	All Users
APIs	[product:apis]	A comma separated list of APIs (name:version) within the product.	✓	✓	✓	
ID	[product:id]	The ID of the product.	✓	✓	✓	
Image URL	[product:image_url]	The URL of the image for the product.	✓	✓	✓	
Name	[product:name]	The name of the product.	✓	✓	✓	
Plans	[product:plans]	A comma separated list of plan names within the product.	✓	✓	✓	
State	[product:state]	The state of the product.	✓	✓	✓	
Title	[product:title]	The title of the product.	✓	✓	✓	

## Plan Tokens

Tokens that are related to an individual product plan.

Name	Token	Description	Product Subscribers	Plan Subscribers	API Subscribers	All Users
Approval required	[product-plan:approval]	Whether the plan requires approval or not.		✓		
Description	[product-plan:description]	The description of the plan.		✓		
Name	[product-plan:name]	The name of a given plan within the product.		✓		
Rate limits	[product-plan:rate-limits]	A comma separated list of rate limit name value pairs that the plan contains.		✓		
Title	[product-plan:title]	The title of the plan.		✓		

## API Tokens

Tokens that are related to an individual API.

Name	Token	Description	Product Subscribers	Plan Subscribers	API Subscribers	All Users
ID	[api:id]	The ID of the API.			✓	
Image URL	[api:image_url]	The URL of the image for the API.			✓	
Name	[api:name]	The name of the API.			✓	
OAI Version	[api:oai_version]	The OAI version of the API.			✓	
Protocol	[api:protocol]	The protocol of the API.			✓	
State	[api:state]	The current state the API is in.			✓	
Title	[api:title]	The title of the API.			✓	
Version	[api:version]	The version of the API.			✓	

## User Tokens

Tokens that are related to the individual user account of the recipient.

Name	Token	Description	Product Subscribers	Plan Subscribers	API Subscribers	All Users
Account Name	[user:account-name]	The login name of the user account.	✓	✓	✓	✓
Created	[user:created]	The date the user account was created.	✓	✓	✓	✓
Display Name	[user:display-name]	The display name of the user account.	✓	✓	✓	✓
Email	[user:mail]	The email address of the user account.	✓	✓	✓	✓
First Name	[user:first_name]	The first name of the user.	✓	✓	✓	✓
Last Name	[user:last_name]	The last name of the user.	✓	✓	✓	✓
Roles	[user:roles]	The user roles associated with the user account.	✓	✓	✓	✓
State	[user:apic_state]	List (text) field.	✓	✓	✓	✓

Name	Token	Description	Product Subscribers	Plan Subscribers	API Subscribers	All Users
User ID	[user:uid]	The unique ID of the user account.	✓	✓	✓	✓

## Current User Tokens

Tokens that are related to the current user who is initiating the sending of the emails.

Name	Token	Description	Product Subscribers	Plan Subscribers	API Subscribers	All Users
Account name	[current-user:account-name]	The login name of the user account.	✓	✓	✓	✓
Display name	[current-user:display-name]	The display name of the user account.	✓	✓	✓	✓
Email	[current-user:mail]	The email address of the user account.	✓	✓	✓	✓

## Site Information Tokens

Tokens that are related to site-wide settings and other global configuration.

Name	Token	Description	Product Subscribers	Plan Subscribers	API Subscribers	All Users
Email	[site:mail]	The administrative email address for the site.	✓	✓	✓	✓
Login page	[site:login-url]	The URL of the site's login page.	✓	✓	✓	✓
Name	[site:name]	The name of the site.	✓	✓	✓	✓
Slogan	[site:slogan]	The slogan of the site.	✓	✓	✓	✓
URL	[site:url]	The URL of the site's front page.	✓	✓	✓	✓
URL (brief)	[site:url-brief]	The URL of the site's front page without the protocol.	✓	✓	✓	✓

## Current Date Tokens

Tokens that are related to the current date and time.

Name	Token	Description	Product Subscribers	Plan Subscribers	API Subscribers	All Users
Custom format	[current-date:custom:?]	A date in a custom format. See the PHP documentation for details.	✓	✓	✓	✓
Fallback date format	[current-date:fallback]	A date in 'fallback' format. (Fri, 01/08/2021 - 14:19)	✓	✓	✓	✓
HTML Date	[current-date:html_date]	A date in 'html_date' format. (2021-01-08)	✓	✓	✓	✓
HTML Datetime	[current-date:html_datetime]	A date in 'html_datetime' format. (2021-01-08T14:19:19+0000)	✓	✓	✓	✓
HTML Month	[current-date:html_month]	A date in 'html_month' format. (2021-01)	✓	✓	✓	✓
HTML Time	[current-date:html_time]	A date in 'html_time' format. (14:19:19)	✓	✓	✓	✓
HTML Week	[current-date:html_week]	A date in 'html_week' format. (2021-W01)	✓	✓	✓	✓
HTML Year	[current-date:html_year]	A date in 'html_year' format. (2021)	✓	✓	✓	✓
HTML Yearless date	[current-date:html_yearless_date]	A date in 'html_yearless_date' format. (01-08)	✓	✓	✓	✓
Long format	[current-date:long]	A date in 'long' format. (Friday, January 8, 2021 - 14:19)	✓	✓	✓	✓
Medium format	[current-date:medium]	A date in 'medium' format. (Fri, 01/08/2021 - 14:19)	✓	✓	✓	✓
Raw timestamp	[current-date:raw]	A date in UNIX timestamp format (1610115559)	✓	✓	✓	✓
Short format	[current-date:short]	A date in 'short' format. (01/08/2021 - 14:19)	✓	✓	✓	✓
Time-since	[current-date:since]	A date in 'time-since' format. (6 minutes)	✓	✓	✓	✓

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## How to style the Developer Portal emails

You can apply a theme to the HTML emails that are sent by the Developer Portal by using CSS and templating.

## Before you begin

---

You must have administrator access to complete this task.

You must have a custom theme. For information about how to create a custom theme, see [Creating a sub-theme](#).

## About this task

---

You can apply custom styling to the HTML content of the emails that are sent by the Developer Portal, such as the emails that are sent by the Email subscribers wizard. The custom styling consists of two parts: editing a twig template and, optionally, also editing a CSS file in your custom theme. See the following instructions for details. Note: These instructions apply only to emails that are sent by the Developer Portal. These instructions don't apply to the consumer invitation, activation, and password reset emails, as these emails are sent by the API Manager. For information about how to style API Manager emails, see [Configuring notifications](#) and [Sending messages to consumer organization owners](#).

## Procedure

---

1. Download the `ibm-apic-mail-message.html.twig` template from [github.com/ibm-apiconnect/devportal/blob/master/ibm\\_apic\\_mail/templates](https://github.com/ibm-apiconnect/devportal/blob/master/ibm_apic_mail/templates), and save it to your custom theme templates directory.
2. Edit the `ibm-apic-mail-message.html.twig` template to fit your custom theme.  
You can add styles directly into this twig template, or you can add them to the `css/mail.css` file in your custom theme, which will mean that they are automatically included in the HTML email content that is sent.

If you are using an SCSS theme that has been generated by the Developer Portal theme generator, then you can put the custom SCSS mail styles into the `mail-overrides.scss` file. These styles will then be compiled into the `mail.css` file.

Note: If you are using an older theme that was generated before API Connect Version 10.0.4.0, then the theme won't contain the mail theme support. However, you can workaround this by generating a new sub-theme with the same name, copying the `overrides.css`, or `overrides.scss`, as appropriate, `logo.png`, and `*.theme` files from the old theme into the new sub-theme, and then compress and install the new sub-theme as usual. (See [Creating a sub-theme](#) for details.)

3. Define a standard set of classes in the `ibm-apic-mail-message.html.twig` template that the Developer Portal administrators can use.  
The twig template lists the variables that can be used within it. The HTML `<body>` element is the actual content of the email message as defined within Drupal. For example, that content could be the information that's entered in the WYSIWYG editor of the Email subscribers wizard. Note that the HTML content in the WYSIWYG editor is more restricted for security reasons, for example, it's not possible to use inline styles in the HTML content in the editor. However, it is possible to use CSS class names, and then define the class in the `mail.css` file, which is then included in the emails. Therefore, it's recommended that you define a standard set of classes that the Developer Portal administrators can use when they're creating emails.
4. Optional: Add images to the `ibm-apic-mail-message.html.twig` template.  
Images can be used by adding a `` reference in the twig template. The `src` attribute for the image must be a fully qualified web URL, and must be externally accessible so that the email recipients can access the image. It's not possible to reference local images, they must be fully qualified URLs. It's also not possible to embed or attach images or other files in the emails.

Note: The `logo` will be automatically set to the fully qualified URL for the site logo image (this is the image that's displayed in the upper-left corner of the Developer Portal UI by default).

5. Compress all of your sub-theme resources back into a .zip file, and install into the Developer Portal. See [Installing additional themes](#) for details.

## What to do next

---

It is possible to have multiple email templates. For example for different modules, where one template could be used for the emails that are sent by the contact module, and another template for the emails that are sent by the Email subscribers wizard. This more advanced configuration can be done by using the module and key attributes, and is explained within the twig template itself. Essentially, you create a twig template that's called `ibm-apic-mail-message.contact.html.twig`, for example, to override the default template for only the contact module. Then the most specific template for a module is used by the Developer Portal, before falling back on the more general template.

## Working with roles in the Developer Portal

As a site administrator, you can create and customize site configuration roles in the Developer Portal.

Rather than assigning individual permissions to each user, permissions are assigned to roles, and then roles are assigned to users. Using roles gives administrators greater control over permissions, and makes it easy to assign and remove roles when necessary.

Administrators can assign the following site configuration roles to users in the Developer Portal:

## Superuser

The Superuser role has the highest level of permissions in the Developer Portal, and is the role that is assigned by default to the admin user, in addition to the Administrator role, when they enable a Developer Portal site in the API Manager. This role bypasses all content access control, which means that users that have a Superuser role can see all of the site content. This level of access can lead to some unexpected behavior when they access content such as their Consumer organizations and their applications. Careful consideration should be given before you assign users to a Superuser role.

## Administrator

An Administrator can use the administrator dashboard to customize and configure the Developer Portal. An Administrator is able to perform any task within the Developer Portal that does not involve the creation of APIs, Products, and Apps.

## Content Author

A Content Author is a curator of content for the Developer Portal. A Content Author can perform the following actions:

- Set taxonomies on the content.
- Provide custom icons for content.
- Upload additional documentation files.
- Create documentation pages in the Developer Portal.

## Forum Moderator

A Forum Moderator can moderate the content of a forum in the Developer Portal.

Note: Every account in the Developer Portal, including across different user registries for the same site, must have a unique email address, including the site Admin account. For example, if you configure three different user registries for a particular Developer Portal site, the email address *alice@acme.com* can be used to log in to the site from only one of the user registries. The default email address for the Admin account is the email address of the Catalog owner. It is not possible to create a user account (and associated Consumer organization) with the same email address as the Admin account (or that of the Catalog owner if their email address is different). Any attempts to create an account with the same email address results in the new account not functioning correctly, and returning the following error message when trying to log in: **A user already exists with this email address.**

To learn how to create and customize roles in the Developer Portal, use the following topic links:

- [Creating administrator users for the Developer Portal](#)  
You can create additional administrator users for an Developer Portal.
- [Assigning users to a role](#)  
Assign users to one or more roles in the Developer Portal to enable role specific permissions.
- [Assigning permissions to a role](#)  
You can assign permissions to a new role in the Developer Portal, and update the permissions for current roles.
- [Creating a new role](#)  
You can create a new role within the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

# Creating administrator users for the Developer Portal

You can create additional administrator users for an Developer Portal.

## Before you begin

You must have administrator access to complete this task.

## About this task

After you enable a Developer Portal site in the API Manager, you are sent an email that contains a one-time log in link for the Developer Portal site Admin user. The Admin user can administer the Content Management System (CMS) capabilities of the Developer Portal. For more information about enabling a site, see [Creating and configuring Catalogs](#).

However, you can also create additional administrative roles for users from within the Developer Portal by assigning the role to users that have access to the Developer Portal. A user with an Administrator role can use the administrator dashboard to customize and configure the Developer Portal. An Administrator is able to perform any task within the Developer Portal that does not involve the creation of APIs, Products, and Apps. You should be careful to ensure that only trusted users are given this access and level of control of your site.

## Procedure

To create additional administrative users, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click People in the administrator dashboard.
3. Select the List tab.
4. Select the check boxes for the target users.
5. From the drop-down list under the Action heading, select Add the Administrator role to the selected user(s).
6. Click Apply to selected items.

## Results

You have assigned the selected users to the Administrator role.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Assigning users to a role

Assign users to one or more roles in the Developer Portal to enable role specific permissions.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

To assign users to a role, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click People in the administrator dashboard.
3. Select the List tab.
4. Select the check boxes for the target users.
5. From the drop-down list under the Action heading, select the role that you want to assign.
6. Click Apply to selected items.

### Results

---

You have assigned the selected users to the required role.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Assigning permissions to a role

You can assign permissions to a new role in the Developer Portal, and update the permissions for current roles.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

To assign or update permissions for a role, complete the following steps:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click People in the administrator dashboard.
3. Select the Permissions tab.
4. Assign a permission to a role, by selecting the check box in the relevant column for the permission that you want to assign.
5. Click Save permissions.

### Results

---

You have assigned permissions to the target role.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Creating a new role

You can create a new role within the Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

## Procedure

---

To create a new role, complete the following steps:

1. Click People in the administrator dashboard.
2. Select the Roles tab.
3. Click Add role.
4. Enter a name for the new role in Role name, and click Save.
5. Your new role is displayed in the list of roles. You can drag any of the roles to re-order them. It's recommended to order roles from least permissive (for example, Anonymous user) to most permissive (for example, Administrator user). Users who aren't logged in have the Anonymous user role. Users who are logged in have the Authenticated user role, plus any other roles granted to their user account.

## Results

---

You have created a new role in the Developer Portal.

## What to do next

---

The new role is created with the same permissions as an Authenticated user role. You can click the Permissions tab and edit the permissions as required.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Forums

---

Create and control forums in the Developer Portal.

The Developer Portal lets you create threaded discussion boards, called forums, on your site. To learn how to configure forums, use the following topic links.

- [Creating a new forum](#)  
You can create a new forum in the Developer Portal.
- [Creating new forum containers](#)  
You can create new forum containers in the Developer Portal.
- [Configuring the creation of new forums for each API](#)  
You can choose whether or not to automatically create a new forum when an API is created in the Developer Portal.
- [Locking forum topics](#)  
You can lock forum topics in the Developer Portal.
- [Marking content in a forum as sticky](#)  
You can mark content in a forum as sticky in the Developer Portal.
- [Removing forum posts](#)  
You can remove forum posts in the Developer Portal.
- [Turning off forums in the Developer Portal](#)  
You can turn off forums in the Developer Portal by disabling the Forum module. This action prevents users from viewing, and contributing to, forums.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Creating a new forum

---

You can create a new forum in the Developer Portal.

## Before you begin

---

You must have administrator or Forum moderator access to complete this task.

## Procedure

---

To create a new forum, complete the following tasks:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure in the administrator dashboard.
3. Click Forums.
4. Click Add forum.
5. Fill in the Name and Description fields for the new forum.
6. From the Parent drop-down list, select the hierarchical position of the new forum.
7. Click Save. You have created a new forum.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Creating new forum containers

You can create new forum containers in the Developer Portal.

### Before you begin

---

You must have administrator or Forum moderator access to complete this task.

### Procedure

---

To create a new forum containers, complete the following tasks:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Structure in the administrator dashboard.
3. Click Forums.
4. Click Add container.
5. Fill in the Name and Description fields for the new forum container.
6. From the Parent drop-down list, select the hierarchical position of the new forum container.
7. Click Save. You have created a new forum container.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Configuring the creation of new forums for each API

You can choose whether or not to automatically create a new forum when an API is created in the Developer Portal.

### Before you begin

---

You must have administrator access to complete this task.

### Procedure

---

To configure the creation of new forums for each API, complete the following tasks:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Configuration in the administrator dashboard.
3. Under the SYSTEM heading, click IBM API Connect.
4. Select or clear the Automatically create a forum per API check box to turn the feature on or off.
5. Click Save configuration.

You have configured the creation of new forums for each API.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Locking forum topics

You can lock forum topics in the Developer Portal.

### Before you begin

---

You must have administrator or Forum moderator access to complete this task.

### Procedure

---

To lock forum topics, complete the following tasks:

1. If the administrator dashboard is not displayed, click Manage to display it.

2. Click Content in the administrator dashboard.
3. Click Edit for the forum topic that you want to lock.
4. Click Comment settings. The view expands.
5. Select Closed .
6. Keeping the Published selected, click Save.  
You have disallowed any further replies and marked the topic as locked.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Marking content in a forum as sticky

You can mark content in a forum as sticky in the Developer Portal.

### Before you begin

---

You must have administrator or Forum moderator access to complete this task.

### Procedure

---

To mark content in a forum as sticky, complete the following tasks:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Content in the administrator dashboard.
3. From the Action drop-down menu, select Make content sticky.
4. Select the check boxes next to the forum topics that you want to make sticky.
5. Click Apply to selected items.  
You made the selected forum content sticky.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Removing forum posts

You can remove forum posts in the Developer Portal.

### Before you begin

---

You must have administrator or Forum moderator access to complete this task.

### Procedure

---

To remove forum posts, complete the following tasks:

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Click Content in the administrator dashboard.
3. From the Action drop-down menu, select Delete content.
4. Select the check boxes next to the forum posts that you want to remove.
5. Click Apply to selected items.  
You removed the selected forum posts.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Turning off forums in the Developer Portal

You can turn off forums in the Developer Portal by disabling the Forum module. This action prevents users from viewing, and contributing to, forums.

### Before you begin

---

You must have administrator access to complete this task.

## About this task

---

To turn off forums, you must first remove all Forums terms, and then you can disable the Forum module.

## Procedure

---

To turn off forums, complete the following steps.

1. If the administrator dashboard is not displayed, click Manage to display it.
2. Delete all Forums terms by completing the following steps:
  - a. Click Structure > Taxonomy > Forums in the administrator dashboard. The list of Forums terms is displayed.
  - b. For each item in the list of terms, select Delete from the drop-down list in the OPERATIONS column, and then click Delete again to confirm. All of the Forums terms are deleted.
3. Disable the Forum module by completing the following steps:
  - a. Click Extend > Disable module in the administrator dashboard.
  - b. Select the Forum module, then click Disable.
  - c. The display then shows a list of forum configuration that will also be removed if the Forum module is disabled. Click Disable again to confirm that you agree to this removal.

## Results

---

You successfully turned off forums in the Developer Portal.

If you want, you can enable the Forum module again by clicking Extend, selecting the Forum module on the List tab, and clicking Enable.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Reports

---

You can view reports about the general configuration and status of your Developer Portal site.

Use the Reports section in the Developer Portal to view information about the following areas:

### Available updates

Status report about available updates for your installed modules and themes.

### Node Type Count

Status report about how much of each content type there is in your portal site, and whether it is published or not. It can also provide totals of how many users there are of each role.

### Available translation updates

Status report about available interface translations for your installed modules and themes.

### Field list

Overview of fields on all entity types.

### Status report

Short overview of your site's parameters, as well as any problems detected with your installation.

### Views plugins

Overview of the plugins that are used in all views.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Extend

---

You can extend the Developer Portal by creating and installing custom modules, or installing additional Drupal 9 contributed modules.

Modules provide functionality to your site, and the *core modules* that are included in the standard Developer Portal installation, provide all of the basic functions that most sites need. However, some of the core modules are not enabled by default, so you might want to examine the module list under the Extend menu of your site, to see whether the functionality you require is available from a core module before starting to investigate custom and contributed modules. If you still require additional custom or contributed modules, consider the following topics to help you create and implement modules consistently.

Note: The Developer Portal contains a Rules framework for event based actions. Some of those actions and triggers might exhibit unexpected behavior. A workaround is to create a custom module instead, because the same events and actions are possible there.

- [Custom module development: an introduction to Drupal tools for PHP development](#)  
Some guidance about the Drupal tools and environment considerations when developing in PHP, to help when writing custom modules to extend your Developer Portal functionality.
- [Custom module development: background and prerequisites](#)  
You can create custom modules in the Developer Portal to extend functionality. The following information provides a getting started developer guide to custom module development.

- [Custom module development: creating a module skeleton](#)  
You can extend your Developer Portal site by creating custom modules. The starting point for a new module is to create a module skeleton.
- [Custom module development: using hooks](#)  
You can use hooks in custom modules to alter the behavior of Drupal core or other modules in your Developer Portal.
- [Installing custom modules](#)  
You can extend your Developer Portal site by installing custom modules that you created, and also installing contributed modules from the Drupal community.
- [Deleting custom modules](#)  
You can delete custom modules from your Developer Portal if you want to remove them entirely from your site.
- [Disabling modules](#)  
You can disable an entire module in the Developer Portal if you want to improve performance, or remove functionality.
- [Using Developer Portal metadata on API Manager](#)  
For content created or updated after Version 10.0.1.0, the Developer Portal propagates more metadata to API Manager for `consumerorgs`, `users`, and `applications`.
- [Using a custom module for payment method creation](#)  
You can offer free use of your products to your customers or you can configure your Developer Portal to bill your customers when they use your products. You can use a custom module to configure creation of payment methods.

## Custom module development: an introduction to Drupal tools for PHP development

Some guidance about the Drupal tools and environment considerations when developing in PHP, to help when writing custom modules to extend your Developer Portal functionality.

The following sections provide an overview of the key automation tools and environment considerations for PHP development in the Developer Portal. For a complete list of Drupal tools, see [Development tools overview](#) on Drupal.org, however, note that you are not permitted to access the shell inside the Developer Portal containers. Important:

- You are not permitted to include any IBM® API Connect modules within any custom modules that you create. Also, directly editing any API Connect themes, modules, included modules, or Drupal core on the file system is not permitted or supported, as edited versions of these files are overwritten when a fix pack or iFix is installed.
- All custom development is your responsibility. Although the use of custom modules and themes is supported, IBM API Connect do not provide support in their development or modification.

## Devel, Devel Generate Kint, and Webprofiler development modules

---

The Devel, Devel Generate Kint, and Webprofiler modules are all packaged within the Devel module. These modules provide the following development support:

- *Devel* - Helper functions for Drupal developers.
- *Devel Generate Kint* - Accelerate development of your site or module by quickly generating nodes, comments, terms, users, and more.
- *Kint* - Pretty print of variables with `kint($my_var)`.
- *Webprofiler* - Port of the Symfony WebProfiler Bundle as a Drupal module.

For more information, see [Devel module](#) on drupal.org, and [Devel](#) on drupalship.org.

## Admin Toolbar module

---

The Admin Toolbar module improves the default Drupal Toolbar by transforming it into a drop-down menu, providing fast access to the administration pages. It also adds extra links to the Drupal icon on the admin toolbar to development tools such as flush all caches, run cron, and run updates.

For more information, see [Admin toolbar module](#) on drupal.org.

## Examples for developers project

---

The Examples for Developers project aims to provide high-quality, well-documented API examples for a broad range of Drupal core functionality.

The project contains many modules that illustrate best practices for implementing Drupal core APIs. For example there are examples for Block, Cache, Config and Content Entity, Cron, Database API, Email, Events, Form API, Field, Field Permission, File, Hooks, Javascript, Node Type, Page, Pager, PHPUnit, Plugin Type, Queue, Simple Test, Stream Wrapper, Table Sort, Testing, and Tour.

For more information, see [Examples for developers project](#) on drupal.org.

## Coding standards

---

The Drupal Coding Standards apply to code within Drupal and its contributed modules. For more information, see [Coding standards](#) on drupal.org.

## Related tasks

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Custom module development: background and prerequisites

You can create custom modules in the Developer Portal to extend functionality. The following information provides a getting started developer guide to custom module development.

Custom modules are written in PHP, which is an open source server-side scripting language that is used for creating dynamic web pages. For general information on the Drupal tools for PHP development, see [Custom module development: an introduction to Drupal tools for PHP development](#).

The following sections provide an overview of custom module development, with links to learn more about the required development languages and concepts. Creating custom modules affects the source of your Developer Portal site, so it is recommended that you gain Drupal experience and PHP knowledge before you start creating modules.

Important:

- You are not permitted to include any IBM® API Connect modules within any custom modules that you create. Also, directly editing any API Connect themes, modules, included modules, or Drupal core on the file system is not permitted or supported, as edited versions of these files are overwritten when a fix pack or iFix is installed.
- All custom development is your responsibility. Although the use of custom modules and themes is supported, IBM API Connect do not provide support in their development or modification.

## Object-Oriented Programming (OOP)

---

OOP is established as best practice for development, so ensure your knowledge of OOP is good. The PHP documentation on [Classes and Objects](#) is a good place to start. For a general overview of PHP best practices, see [PHP The Right Way](#). The following resources are also helpful:

- [Object-oriented programming](#) (on Wikipedia)
- [Object Oriented Programming with PHP](#) (on phpro.org)
- [Object-Oriented PHP for Beginners](#) (on tutstplus.com)
- [Object Oriented Programming in PHP](#) (on tutorialspoint.com)

Drupal also uses some common design patterns, so you need to ensure you have a basic understanding of these. See the following pattern resources:

- [The Factory Pattern](#) (on phptherightway.com), and [Late Static Bindings](#) (on php.net)
- [Software design pattern](#) (on Wikipedia)
- [Programming Foundations: Design Patterns](#) (on lynda.com)

## PHP namespaces

---

You must be familiar with the concept of namespaces in PHP. In most cases, the Drupal code is namespaced based on the module that code belongs to.

For example, the namespace for `block.module` is:

```
namespace Drupal\block;
```

When you create Drupal modules, it is important to consider that PHP has a global namespace, and that function names must be unique. You are recommended to prefix the name of any methods with the module name.

For example, if you have a module that is named `custom_module`, a `create` method within it is called `custom_module_create()`.

For more information about namespaces, see the following resources:

- [Drupal namespace standards](#) (on drupal.org)
- [How to use PHP namespaces](#) (on sitepoint.com)
- [PHP Namespaces](#) (on php.net)

## Dependency injection

---

It is important that you have a baseline understanding of dependency injection. Drupal makes heavy use of this concept, so you will need this understanding to be able to access and make use of many of the core APIs.

To find out more about dependency injection, see [Dependency Injection](#) (on phptherightway.com), as well as the additional articles that are linked to on that page. See also [Services and dependency injection in Drupal](#) (on drupal.org).

## Symfony

---

Symfony is a set of reusable PHP components and a PHP framework for web projects. Drupal borrows from this framework in order to reduce code duplication across various PHP projects. Much of the code that Drupal uses to handle routing, sessions, and the services container, amongst other things, is borrowed from Symfony.

To understand how Symfony works, see the [Symfony Documentation](#) on symfony.com.

## Other useful resources

---

- [Drupal API Annotations](#) - list of the different annotation types that Drupal uses for plugin discovery, and to provide additional context/meta-data for the code that's being executed.
- [Plugin API overview](#) - overview about how plugins are used in Drupal.
- Tools are available for checking your custom modules, such as [drupal\\_check](#) on GitHub, which checks Drupal code for deprecations.

---

# Custom module development: creating a module skeleton

You can extend your Developer Portal site by creating custom modules. The starting point for a new module is to create a module skeleton.

## Before you begin

---

You must have administrator access to complete this task.

You must also have experience in Drupal and PHP development. For more information, see [Custom module development: an introduction to Drupal tools for PHP development](#) and [Custom module development: background and prerequisites](#).

Important:

- You are not permitted to include any IBM® API Connect modules within any custom modules that you create. Also, directly editing any API Connect themes, modules, included modules, or Drupal core on the file system is not permitted or supported, as edited versions of these files are overwritten when a fix pack or iFix is installed.
- All custom development is your responsibility. Although the use of custom modules and themes is supported, IBM API Connect do not provide support in their development or modification.

## About this task

---

Every custom module creation starts with creating an .info.yml file. This file, or module skeleton, is used to store the metadata about the custom theme. After the module skeleton is created, the module can be installed onto your site by using the Extend menu on the administrator dashboard of the Developer Portal UI. However, without any module specific code, your site won't be affected.

The following instructions guide you through creating a custom module skeleton. What to do next in your custom module creation depends on what you want your module to do. Options are shown at the end of this task.

## Procedure

---

1. Choose a short name, also known as a machine name, for your custom module.

The machine name is used in several files and functions in your module, as well as by Drupal core to programmatically refer to your module. The name must conform to the following rules:

- It must start with a letter.
- It must contain only lowercase letters and underscores. (Note that if uppercase letters are used in the name, Drupal won't recognize any hook implementations in your module.)
- It must not contain any spaces.
- It must be unique within your Developer Portal site.
- It should not be any of the following reserved terms: `src`, `lib`, `vendor`, `assets`, `css`, `files`, `images`, `js`, `misc`, `templates`, `includes`, `fixtures`, `Drupal`.

2. Create a module folder in a location of your choice, for example, `/modules/module_name`.

You don't have to name the folder the same name as your module machine name, however, you must remember to use the machine name programmatically within your module's code and filenames.

3. Create a `module_name.info.yml` file in your module folder.

Where `module_name` is the short name, or machine name, that you chose in Step 1.

4. Insert the metadata for your custom module into the `module_name.info.yml` file as follows:

```
name: Example module name
description: Description of the module.
package: Custom
```

```
type: module
core: 8.x
core_version_requirement: '^8 || ^9'
version: 1.0

dependencies:
  - module_name

test_dependencies:
  - module_name

configure: example.settings

php: 7.1

hidden: true
```

where

- **name** (required) is the name of your module, and is the text that is shown on the module administration page in the Developer Portal UI.
- **description** (optional) is a description of your module, and is the text that is shown on the module administration page in the Developer Portal UI.
- **package** (optional) is a key that enables you to group similar modules together.
- **type** (required) is the type of extension that you are creating, for example, a module, theme or profile. In this instance you are creating a module.
- **core** (optional) specifies with which Drupal core version your module is compatible.
- **core\_version\_requirement** (required) specifies which versions of Drupal your module is compatible with. This example specifies that the module is compatible with all versions of Drupal 8 and 9.
- **version** (required) is the version number of your module. Note that **version** is not required if you are publishing your module on Drupal.org.
- **dependencies** (optional) is a YAML list of any modules that your module depends on. They must be namespaced in the format `module_name`, where `module_name` is the module's machine name.
- **test\_dependencies** (optional) is list of any modules (in the same format as **dependencies**) that are needed to run certain automated tests for your module on Drupal's automated test runner (DrupalCI), but are not needed as module dependencies in general.
- **configure** (optional), if your module offers a configuration form, specify the route to this form here.
- **php** (optional) is the minimum PHP version that is required for your module. For the Developer Portal the minimum PHP version is 7.1.
- **hidden** (optional) is an option that, if set, will hide your module from the Extend section of the administrator dashboard on the Developer Portal UI. This option might be useful if your module only contains tests, or if the module is meant as an example to other developers.

5. Save your `module_name.info.yml`.

## Results

---

You successfully created your module skeleton.

## Example

---

An example `.info.yml` file:

```
name: User field example
type: module
description: Developer Portal tutorial about a user field example
package: IBM API Connect Tutorials
core: 8.x
core_version_requirement: '^8 || ^9'
version: 8.x-0.0.1
dependencies:
  - ibm_apim
  - auth_apic
```

## What to do next

---

You now need to create the appropriate content for your custom module, depending on what you want the module to do. For information about the various options, see [Creating custom modules](#) on Drupal.org. There is also a walkthrough example of creating a basic custom module that is available on Drupal.org, see: [A "Hello World" custom page module](#).

Note: If you are defining URL paths in the routing file of your module, you must consider any potential implications of those paths, and avoid conflicts with other parts of the Developer Portal. For example, you are recommended not to prefix any paths with `ibm_apic`.

After you have created your custom module content, you need to package your custom module files up into a zip, tar, tgz, gz, or bz2 file. This file can then be installed onto your Developer Portal site by using the Extend menu on the administrator dashboard. For more information, see [Installing custom modules](#).

## Related information

---

- [Let Drupal know about your module with an .info.yml file](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Custom module development: using hooks

You can use hooks in custom modules to alter the behavior of Drupal core or other modules in your Developer Portal.

Custom modules enable you to extend the functionality of your Developer Portal site. For more information about how to create custom modules, see [Custom module development: an introduction to Drupal tools for PHP development](#), and [Custom module development: background and prerequisites](#).

Hooks are one of the ways that custom modules can use to interact with other modules and with Drupal core subsystems. The following sections provide an overview of hooks, and a list of the IBM® API Connect specific hooks.

Important:

- You are not permitted to include any IBM API Connect modules within any custom modules that you create. Also, directly editing any API Connect themes, modules, included modules, or Drupal core on the file system is not permitted or supported, as edited versions of these files are overwritten when a fix pack or iFix is installed.
- All custom development is your responsibility. Although the use of custom modules and themes is supported, IBM API Connect do not provide support in their development or modification.

## About hooks

Hooks define functions that alter the behavior of Drupal core. So one way for custom modules to alter these functions, is to use hooks. Hooks are specially-named functions that a module defines (this is known as *implementing the hook*), these hooks are then discovered and called at specific times to alter or add to the base behavior or data (this is known as *invoking the hook*). Each hook has a name (for example: `hook_batch_alter()`), a defined set of parameters, and a defined return value. Your custom modules can implement hooks that are defined by Drupal core, by API Connect, or by other modules that they interact with. Your custom modules can also define their own hooks in order to let other modules interact with them. For more information, see [Understanding Hooks](#) on Drupal.org.

Note: If you write a hook implementation function, the function must not throw errors or exceptions, or use `alert` level log messages. Errors, exceptions, and `alert` level log messages can break all the processing in the parent code. For example, if you write a hook that calls an external server when an application is updated, the code needs to have error handling in place to handle the server not being found, or not returning the expected result. Otherwise, Drupal stops parsing the function and the application might not get updated correctly. It can cause webhook and snapshot parsing to abort leaving the portal in an inconsistent state.

For a list of all the hooks that are available on Drupal core, and how to implement them in your custom module, see [Drupal API Hooks](#).

For a list of all the API Connect specific hooks, see the following section.

## Using hooks in custom modules

To invoke a hook you need to add a function to your `.module` file in your custom module, and prefix the hook with your custom module name. For example, when using an API Connect hook in a custom module, you must replace the word `hook` in the hook name with the name of your custom module. For example:

`hook_apic_app_create`

should be referenced in your custom module as:

`moduleName_apic_app_create`

See also the following example `.module` file that shows a custom module called `user_field_example`:

```
/**
 * Implementation of hook_form_alter() to alter the Sign up form
 */
function user_field_example_form_alter(&$form, FormStateInterface $form_state, $form_id) {
  if ($form_id === 'user_register_form') {
    // add our validator to the #validate array for the user register form
    $form['#validate'][] = 'user_field_example_validate_department_code';
  }
}

/**
 * Validate the Department code field on the Sign up form.
 *
 * Valid entry = DEPnnn
 * where n = single figure digit.
 */
function user_field_example_validate_department_code($form, &$form_state) {
  if (isset($form_state->getValue('field_department_code')[0]['value'])) {
    $dept_code = $form_state->getValue('field_department_code')[0]['value'];
    $valid = preg_match('/^DEP\d{3}$/', $dept_code);
    if (!$valid) {
      // if the value is not valid then set an inline error on the relevant field
      $form_state->setErrorByName('field_department_code', t('Invalid department code.'));
    }
  }
}
```

## API Connect specific hooks

The following tables list the hooks that are specific to the API Connect Developer Portal. Each section contains a link to the `.php` file on the API Connect Developer Portal repository on GitHub for those hooks. This file contains examples of how you can use the hooks in your modules.

Hooks about Applications

The following table lists the hooks that relate to Applications in the Developer Portal. For examples of how to use Application hooks, see [apic\\_app/apic\\_app.api.php](#) on GitHub.

Table 1. Hooks about Applications

Hook name	Description
<code>hook_apic_app_create</code>	Triggered when an Application is created.
<code>hook_apic_app_update</code>	Triggered when an Application is updated.
<code>hook_apic_app_pre_delete</code>	Triggered when an Application is deleted, before the node deletion or cascade has happened.

Hook name	Description
hook_apic_app_post_delete	Triggered when an Application is deleted, after the node deletion or cascade has happened.
hook_apic_app_promote	Triggered when an Application is promoted.
hook_apic_app_creds_create	Triggered when a new set of credentials is created for an Application.
hook_apic_app_creds_update	Triggered when a set of credentials is updated for an Application.
hook_apic_app_creds_delete	Triggered when a set of credentials is deleted for an Application.
hook_apic_app_subscribe	Triggered when a subscription is created.
hook_apic_app_migrate	Triggered when a subscription is migrated to a new Plan.
hook_apic_app_unsubscribe	Triggered when an Application is unsubscribed from a Plan.
hook_apic_app_image_create	Triggered when a custom Application image is created.
hook_apic_app_image_delete	Triggered when a custom Application image is deleted.
hook_apic_app_clientid_reset	Triggered when a credential client ID is reset.
hook_apic_app_clientsecret_reset	Triggered when a credential client secret is reset.
hook_apic_app_modify_getplaceholderimage_alter	Alter the Application placeholder image provided in \Drupal\apic_app\Application::getPlaceholderImage(). Can be used to define a specific placeholder image to use when the consumer has not uploaded their own custom image for their Application.
hook_apic_app_modify_getimageforapp_alter	Alter the Application placeholder image provided in \Drupal\apic_app\Application::getImageForApp(). Can be used to provide a full path to a specific image to use for an Application that overrides any custom image that might have been uploaded.
hook_apic_app_modify_client_id_reset_alter	Alter the client ID provided by API Manager when the ID is reset.
hook_apic_app_modify_client_secret_reset_alter	Alter the client secret provided by API Manager when the secret is reset.
hook_apic_app_modify_credentials_create_alter	Alter the credentials provided by API Manager when a new Application is created.
hook_apic_app_modify_credentials_create_alter	Alter the credentials provided by API Manager when new credentials are created.

Hooks about Consumer organizations

The following table lists the hooks that relate to Consumer organizations in the Developer Portal. For examples of how to use Consumer organization hooks, see [consumerorg/consumerorg.api.php](https://github.com/ibm/api-connect/blob/master/consumerorg/consumerorg.api.php) on GitHub.

Table 2. Hooks about Consumer organizations

Hook name	Description
hook_consumerorg_create	Triggered when a Consumer organization is created.
hook_consumerorg_update	Triggered when a Consumer organization is updated.
hook_consumerorg_pre_delete	Triggered when a Consumer organization is deleted, before the node deletion or cascade has happened.
hook_consumerorg_post_delete	Triggered when a Consumer organization is deleted, after the node deletion or cascade has happened.
hook_consumerorg_payment_method_create_alter	Triggered to allow modification of the payment method creation form.
hook_consumerorg_myorg_tabs_alter	Triggered to allow more tabs to be added to the <b>my organization</b> page.

Hooks about APIs

The following table lists the hooks that relate to APIs in the Developer Portal. For examples of how to use API hooks, see [apic\\_api/apic\\_api.api.php](https://github.com/ibm/api-connect/blob/master/apic_api/apic_api.api.php) on GitHub.

Table 3. Hooks about APIs

Hook name	Description
hook_apic_api_create	Triggered when an API is created.
hook_apic_api_update	Triggered when an API is updated.
hook_apic_api_delete	Triggered when an API is deleted.

Hooks about Products

The following table lists the hooks that relate to Products in the Developer Portal. For examples of how to use Product hooks, see [product/product.api.php](https://github.com/ibm/api-connect/blob/master/product/product.api.php) on GitHub.

Table 4. Hooks about Products

Hook name	Description
hook_product_create	Triggered when a Product is created.
hook_product_update	Triggered when a Product is updated.
hook_product_delete	Triggered when a Product is deleted.

Other IBM API Connect Hooks

The following table lists the hooks that can be for other uses.

Table 5. Other APIC Hooks

Hook name	Description
hook_ibm_apim_subscription_wizard_summary_alter	Triggered to allow modification of the summary page of the subscription wizard.

## Related tasks

## Related information

- [Creating custom modules](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Installing custom modules

You can extend your Developer Portal site by installing custom modules that you created, and also installing contributed modules from the Drupal community.

### Before you begin

---

You must have administrator access to complete this task.

### About this task

---

You can add extra functions to your site by installing new custom or contributed modules. For more information on creating custom modules, see [Custom module development: background and prerequisites](#). Contributed modules are modules that are contributed by Drupal community members. To search for contributed modules, go to [Drupal Download & Extend](#). You can install both types of modules into your Developer Portal site by using the following instructions.

Note: The following modules are unsupported and their installation is blocked in the Developer Portal:

- `backup_migrate`
- `content_sync`
- `delete_all`
- `devel_themer`
- `domain`
- `php`
- `simple_html_mail`
- `swiftmailer`
- `theme_editor`

### Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. In the administrator dashboard, click Extend.  
The List tab for the Extend page opens, and the list of installed modules is displayed. The list shows all the modules that are installed. The modules that are displayed with a selected checkbox are enabled, the modules that are displayed without a selected checkbox are not enabled.
3. Click + Install new module, and either complete the Install from a URL field, or click Choose file to upload a *filename.tar.gz* module file from your local computer.
4. Click Install.  
The Update manager confirms that the module was installed successfully.
5. Click Enable newly added modules to return to the List tab for the Extend page.
6. Find your newly added module in the list of modules, select its checkbox, and click Enable.  
Your newly added module is now enabled and available for you to use in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Deleting custom modules

You can delete custom modules from your Developer Portal if you want to remove them entirely from your site.

### Before you begin

---

You must have administrator access to complete this task.

Note that any custom modules that you want to delete must be disabled first, including disabling any associated sub-modules. For more information, see [Disabling modules](#). Any modules that are shipped with IBM® API Connect cannot be deleted.

### Procedure

---

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. In the administrator dashboard, click Extend.
4. Click the Delete tab.  
The list of disabled custom modules that can be deleted is displayed. Note that any disabled modules that have sub-modules that are still enabled, are prevented from being disabled.
5. After you have found the module that you want to delete, select the check box next to the module, then click Delete.
6. At the confirmation dialogue, select Delete to delete the module completely from your site, or select Cancel to cancel the operation.

## Results

---

You successfully deleted the module.

## What to do next

---

To install a module, see [Installing custom modules](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Disabling modules

You can disable an entire module in the Developer Portal if you want to improve performance, or remove functionality.

## Before you begin

---

You must have administrator access to complete this task.

Note that the disable process removes all data related to a module.

## Procedure

---

1. Log in to the Developer Portal as an administrator.
2. If the administrator dashboard is not displayed, click Manage to display it.
3. In the administrator dashboard, click Extend.  
The List tab for the Extend page opens, and the list of installed modules is displayed. The list shows all the modules that are installed, some of which are enabled (displayed with a selected check box), and some of which are not enabled (where the check box is not selected).
4. Click the Disable tab.  
The list of modules that can be disabled is displayed. Note that any modules that are required by other enabled modules, are prevented from being disabled.
5. Either enter the name of the module that you want to disable in the Filter by name or description field, or scroll through the list of modules.
6. After you have identified the module that you want to disable, select the check box next to the module, then click Disable.
7. At the confirmation dialogue, select Disable to disable the module and remove any data that relates to it, or select Cancel to cancel the operation.

## Results

---

You successfully disabled the module.

## What to do next

---

To enable a module, return to the List tab, select the check box next to the module that you want to enable, and click Enable. You can also delete custom modules completely from your Developer Portal site; see [Deleting custom modules](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using Developer Portal metadata on API Manager

For content created or updated after Version 10.0.1.0, the Developer Portal propagates more metadata to API Manager for **consumerorgs**, **users**, and **applications**.

This metadata might be values that the user provided by adding extra fields to content types, or added programmatically by using custom modules.

The benefit of this is that when you add custom fields to **consumerorgs**, **users**, and **applications**, this data is now also stored as metadata in API Manager. Storing this data allows the Developer Portal to correct or repopulate the custom fields from a webhook or a snapshot.

## Related tasks

- [Installing custom modules](#)

## Related information

---

- [Creating custom modules](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Using a custom module for payment method creation

You can offer free use of your products to your customers or you can configure your Developer Portal to bill your customers when they use your products. You can use a custom module to configure creation of payment methods.

### Before you begin

---

You must have administrator access to complete this task.

You must have configured billing support in API Manager.

Create your custom module. Your custom module needs to implement the `consumerorg_payment_method_create_alter` hook, so it needs to have a function like this:

```
my_custom_module_consumerorg_payment_method_create_alter(&$form, $integration, $billing) {  
  // do this payment function with $form  
}
```

For more information, see [Custom module development: background and prerequisites](#).

### Procedure

---

1. If the administrator dashboard is not displayed, click Manage to display it.
2. In the administrator dashboard, click Extend.  
The List tab for the Extend page opens, and the list of installed modules is displayed. The list shows all the modules that are installed. The enabled modules are displayed with a selected checkbox. The disabled modules are displayed without a selected checkbox.
3. Click + Install new module, and either complete the Install from a URL field, or click Choose file to upload a `filename.tar.gz` module file from your local computer.
4. Click Install.  
The Update manager confirms that the module was installed successfully.
5. Click Enable newly added modules to return to the List tab for the Extend page.
6. Find your newly added module in the list of modules, select its checkbox, and click Enable.  
Your newly added module is now enabled and available for you to use in the Developer Portal.
7. In the administrator dashboard, click Configuration > System > IBM API Connect Billing Settings in the administrator dashboard.
8. Change the drop-down option to be your newly enabled module for your billing provider.

### Results

---

You successfully enabled your payment method by using a custom module.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Using the Developer Portal command-line tool

The Developer Portal provides a command-line tool, `apic`, that you can use to replicate all or part of your Developer Portal environment. For example, you can use this tool to save time and effort, and reduce errors, when setting up new `custom themes`.

### Setting up the command-line tool

---

For information on downloading and setting up the command-line tool, see [Installing the toolkit](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Overview of the Developer Portal command-line tool

The Developer Portal provides commands for managing your Developer Portal environment.

### Setting up the toolkit

---

Use the Developer Toolkit to run commands for managing your Developer Portal. For information on installing the toolkit, see [Installing the toolkit](#).

## Command syntax

---

In general, commands have the following syntax:

```
apic command:sub-command [argument] [options]
```

where

- *command* is the command, usually the thing on which you are acting (for example, product, app, API, Catalogs, and so on).
- *sub-command* is the action to perform.
- *argument* is the argument, where applicable (for example, `catalog`).
- *options* are any number of command-line options, which have the form `--option [value]`. Options also have a short form with a single dash instead of a double dash.

Important: To use the Developer Portal CLI you must supply the `--mode portaladmin` or `-m portaladmin` parameter to any `apic` command.

## Viewing command line tool help

---

Display general command-line help information by entering the following command: `apic --help` or `apic -h`. Display help information for a specific `apic` command by entering the following command: `apic command_name --help` or `apic command_name -h`.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Logging in to a Developer Portal server

You log in to a management server from the command line by using the `apic login` command. The parameters that you supply determine the identity provider that is used to authenticate the supplied user ID, and the scope of the tasks that can be performed after successful log in.

To log in to the Developer Portal server from the command line, enter the following command:

```
apic login --server mgmt_endpoint_url --username user_id --password password --realm realm
```

The parameters for the `apic login` command are as follows:

*mgmt\_endpoint\_url*

Either the platform API endpoint URL, or the consumer API endpoint URL. Use the platform API endpoint URL if you are logging in as a member of a cloud administration organization or provider organization, and the consumer API endpoint URL if you are logging in as a member of a consumer organization. These endpoint URLs are configured during the installation of API Connect, as described in [Installing the Management subsystem into a Kubernetes environment](#) and [Deploying the Management subsystem in a VMware environment](#). If you have access to the Cloud Manager user interface, you can view the configured endpoint URLs as described in [Viewing platform and UI endpoints](#), ignoring any segments at the end of the displayed URLs. If you are not sure of the endpoint URL, ask your administrator.

*user\_id*

The user ID you want to log in with.

*password*

The password associated with the supplied user ID.

*realm*

The *realm* parameter specifies the identity provider that is used to authenticated the supplied user ID, and the scope of the tasks that can be performed after successful log in.

The format of the *realm* depends on the type of user, as follows:

- Member of the cloud administration organization:

```
admin/identity_provider
```

- Member of a provider organization:

```
provider/identity_provider
```

- Member of a consumer organization:

```
consumer:provider_org:catalog/identity_provider
```

where *provider\_org* is the name of your provider organization, and *catalog* is the name of the Catalog in that provider organization.

Important: If you log in to the CLI as a member of a consumer organization, you must supply the `--mode=consumer` parameter to the `apic login` command, and to all consumer commands. To avoid having to type the parameter every time, you can set the `mode` configuration variable, by entering the following command:

```
apic config:set mode=consumer
```

If you want to log in as a member of the cloud administration organization, or as a member of a provider organization, you can help determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope scope --server mgmt_endpoint_url --fields title,realm
```

where `scope` has the value `admin` or `provider` depending on whether you want to log in as a member of the cloud administration organization, or as a member of a provider organization. The output lists the names and titles of all identity providers, for example:

```
apic identity-providers:list --scope admin --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: admin/default-idp-1
- title: Corporate LDAP user registry
  realm: admin/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default Cloud Manager Local User Registry for login as a member of the cloud administration organization is `default-idp-1`, and the default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`.

By default, API Connect creates a local user registry for user login for every context. The identity providers associated with these default registries are as follows:

Registry	Identity provider name
Cloud Manager Local User Registry (for login as a member of the cloud administration organization)	default-idp-1
API Manager Local User Registry (for login as a member of a provider organization)	default-idp-2
Sandbox Catalog User Registry (for login as a member of a consumer organization)	sandbox-idp

If you want to log in as a member of a consumer organization, and you are not using the default Sandbox Catalog User Registry, ask your administrator for the name of your identity provider.

## Obtaining your organization information

You need to know some information about your organization as this needed as input for some of the Developer Portal CLI commands.

```
apic orgs:get -s mgmt_endpoint_url <org_name>
```

## Logging out

To log out of a management server, use the following command:

```
apic logout --server mgmt_endpoint_url
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Developer Portal CLI commands

A summary of the commands that are supported in the Developer Portal CLI.

## Authenticating

Use the `apic login` command to authenticate, and the `apic logout` command to remove your local authentication credentials. For more information, see [Logging in to a Developer Portal server](#).

Note: When you authenticate successfully, your credentials are stored, in plain text, in the file `Linux .netrc` or `Windows _netrc`. Therefore, you must set the file permissions in such a way that your credentials are not accessible by others.

## Command summary

The following tables summarize `apic --mode portaladmin` commands.

Table 1. Summary of general-purpose commands

Command	Description	Subcommands
<code>apic api</code>	Manage your <code>api</code> .	<ul style="list-style-type: none"> <li><code>apic api:get</code> - Get an API from a portal service.</li> <li><code>apic api:get-document</code> - Get a specific entire API document from the portal of the given organization and catalog.</li> <li><code>apic api:list</code> - List the APIs of the given org and catalog.</li> </ul> <p> <ul style="list-style-type: none"> <li><code>-s</code>, <code>--server mgmt_endpoint_url</code>. Use the value of the platform API endpoint URL for this entry.</li> <li><code>--org orgid</code></li> <li><code>--catalog catalog id</code>.</li> <li><code>--debug</code>. If you need debug information.</li> </ul> </p> <p>For more information, see <a href="#">Using the api commands</a>.</p>

Command	Description	Subcommands
<code>apic apic-config</code>	Manage your <code>apic-config</code> .	<ul style="list-style-type: none"> <li>• <code>apic apic-config:get</code> - Get the configuration of a site.</li> <li>• <code>-s, --server mgmt_endpoint_url</code>. Use the value of the platform API endpoint URL for this entry.</li> <li>• <code>--org orgid</code></li> <li>• <code>--catalog catalog id</code>.</li> <li>• <code>--debug</code>. If you need debug information.</li> </ul> <p>For more information, see <a href="#">Using the apic-config commands</a>.</p>
<code>apic application</code>	Manage your <code>application</code> .	<ul style="list-style-type: none"> <li>• <code>apic application:get</code> - Get an application from a portal service.</li> <li>• <code>apic application:list</code> - List the applications on a portal service.</li> <li>• <code>-s, --server mgmt_endpoint_url</code>. Use the value of the platform API endpoint URL for this entry.</li> <li>• <code>--org orgid</code></li> <li>• <code>--catalog catalog id</code>.</li> <li>• <code>--debug</code>. If you need debug information.</li> </ul> <p>For more information, see <a href="#">Using the application commands</a>.</p>
<code>apic backups</code>	Manage your <code>backups</code> .	<ul style="list-style-type: none"> <li>• <code>apic backups:list</code> - List the backups of a portal service.</li> <li>• <code>-s, --server management_server</code>.</li> <li>• <code>--portal_service_name portal_service_name</code></li> <li>• <code>--format format</code>. The options are <code>json</code> or <code>yaml</code>.</li> </ul> <p>For more information, see <a href="#">Using the backups commands</a>.</p>
<code>apic consumer-org</code>	Manage your <code>apic consumer-org</code> .	<ul style="list-style-type: none"> <li>• <code>apic consumer-org:get</code> - Get a consumer org from a portal service.</li> <li>• <code>apic consumer-org:list</code> - List the consumer orgs on a portal service.</li> <li>• <code>-s, --server mgmt_endpoint_url</code>. Use the value of the platform API endpoint URL for this entry.</li> <li>• <code>--org orgid</code></li> <li>• <code>--catalog catalog id</code>.</li> <li>• <code>--debug</code>. If you need debug information.</li> </ul> <p>For more information, see <a href="#">Using the consumer-org commands</a>.</p>
<code>apic custom-module</code>	Manage your <code>custom modules</code> .	<ul style="list-style-type: none"> <li>• <code>apic custom-module:create-export</code> - Create an export of a <code>custom module</code>.</li> <li>• <code>apic custom-module:create-import</code> - Create an import of a <code>custom module</code>.</li> <li>• <code>apic custom-module:delete-export</code> - Delete an export of a <code>custom module</code>.</li> <li>• <code>apic custom-module:delete-import</code> - Delete an import of a <code>custom module</code>.</li> <li>• <code>apic custom-module:get-export</code> - Get an export of a <code>custom module</code>.</li> <li>• <code>apic custom-module:get-export-status</code> - Get the status of an export of a <code>custom module</code>.</li> <li>• <code>apic custom-module:get-import-status</code> - Get the status of an import of a <code>custom module</code>.</li> <li>• <code>-s, --server mgmt_endpoint_url</code>. Use the value of the platform API endpoint URL for this entry.</li> <li>• <code>--org orgid</code></li> <li>• <code>--catalog catalog id</code>.</li> <li>• <code>--format format</code>. Note that this flag has no affect on the <code>create-export</code> and <code>create-import</code> subcommands.</li> <li>• <code>--debug</code>. If you need debug information.</li> </ul> <p>For more information, see <a href="#">Using the custom-module commands</a>.</p>

Command	Description	Subcommands
<code>apic custom-theme</code>	Manage your <code>custom themes</code> .	<ul style="list-style-type: none"> <li>• <code>apic custom-theme:create-export</code> - Create an export of a <code>custom theme</code>.</li> <li>• <code>apic custom-theme:create-import</code> - Create an import of a <code>custom theme</code>.</li> <li>• <code>apic custom-theme:delete-export</code> - Delete an export of a <code>custom theme</code>.</li> <li>• <code>apic custom-theme:delete-import</code> - Delete an import of a <code>custom theme</code>.</li> <li>• <code>apic custom-theme:get-export</code> - Get an export of a <code>custom theme</code>.</li> <li>• <code>apic custom-theme:get-export-status</code> - Get the status of an export of a <code>custom theme</code>.</li> <li>• <code>apic custom-theme:get-import-status</code> - Get the status of an import of a <code>custom theme</code>.</li> </ul> <ul style="list-style-type: none"> <li>• <code>-s</code>, <code>--server mgmt_endpoint_url</code>. Use the value of the platform API endpoint URL for this entry.</li> <li>• <code>--org orgid</code></li> <li>• <code>--catalog catalog id</code>.</li> <li>• <code>--format format</code>. Note that this flag has no affect on the <code>create-export</code> and <code>create-import</code> subcommands.</li> <li>• <code>--debug</code>. If you need debug information.</li> </ul> <p>For more information, see <a href="#">Using the custom-theme commands</a>.</p>
<code>apic custom-translation</code>	Manage your <code>custom translations</code> .	<ul style="list-style-type: none"> <li>• <code>apic custom-translation:create-export</code> - Create a task to export a <code>custom translation</code>.</li> <li>• <code>apic custom-translation:create-import</code> - Create a task to import a <code>custom translation</code>.</li> <li>• <code>apic custom-translation:delete-export</code> - Cancel any ongoing or recently created export tasks.</li> <li>• <code>apic custom-translation:delete-import</code> - Cancel any ongoing or recently created import tasks.</li> <li>• <code>apic custom-translation:get-export</code> - Streams an export artifact of a <code>custom translation</code> back to the provided task ID.</li> <li>• <code>apic custom-translation:get-export-status</code> - Get the status of an export of a <code>custom translation</code>.</li> <li>• <code>apic custom-translation:get-import-status</code> - Get the status of an import of a <code>custom translation</code>.</li> </ul> <p>For more information, see <a href="#">Using the custom-translation commands</a>.</p>
<code>apic custom-webserver-page</code>	Manage your <code>custom-webserver-page</code> content.	<ul style="list-style-type: none"> <li>• <code>apic custom-webserver-page:delete</code> - Delete a custom HTML web server error page.</li> <li>• <code>apic custom-webserver-page:get</code> - Get the content of a custom HTML web server error page.</li> <li>• <code>apic custom-webserver-page:set</code> - Set a custom HTML web server error page by using a valid HTML5 content file.</li> </ul> <p>For more information, see <a href="#">Using the custom-webserver-page commands</a>.</p>
<code>apic drupal-config</code>	Manage your <code>drupal-config</code> .	<ul style="list-style-type: none"> <li>• <code>apic drupal-config:delete</code> - Delete a Drupal config object, or a specific config key.</li> <li>• <code>apic drupal-config:get</code> - Get all of the key values for a Drupal config object, or a specific config key value.</li> <li>• <code>apic drupal-config:list</code> - List the Drupal config names by prefix, or list all.</li> <li>• <code>apic drupal-config:set</code> - Set a new Drupal config key and value, or update an existing config key and value.</li> </ul> <p>For more information, see <a href="#">Using the drupal-config commands</a>.</p>
<code>apic entity</code>	Manage your <code>entity</code> .	<ul style="list-style-type: none"> <li>• <code>apic entity:count</code> - A count of entities from a site.</li> </ul> <ul style="list-style-type: none"> <li>• <code>-s</code>, <code>--server mgmt_endpoint_url</code>. Use the value of the platform API endpoint URL for this entry.</li> <li>• <code>--org orgid</code></li> <li>• <code>--catalog catalog id</code>.</li> <li>• <code>--debug</code>. If you need debug information.</li> </ul> <p>For more information, see <a href="#">Using the entity commands</a>.</p>
<code>apic factory-reset</code>	Perform a factory reset of your Developer Portal.	<ul style="list-style-type: none"> <li>• <code>apic factory-reset:delete</code> - Perform a factory reset of your Developer Portal, deleting the portal service and all of its associated Developer Portal sites.</li> <li>• <code>--execute_reset</code> must be set to <code>true</code> to trigger the Developer Portal reset. If not set, the command performs a dry run status of a factory reset.</li> <li>• <code>--portal_service_name portal_service_name</code>.</li> <li>• <code>-s</code>, <code>--server management_server</code>.</li> </ul> <p>Warning: The <code>factory-reset</code> command is irreversible. You must ensure that you have backups created before running this command.</p> <p>For more information, see <a href="#">Using the factory-reset command</a>.</p>

Command	Description	Subcommands
<code>apic ip-security-enabled</code>	Manage your IP security.	<ul style="list-style-type: none"> <li>• <code>apic ip-security-enabled:update</code> - Enable or disable the IP security at the portal service level.</li> <li>• <code>--enabled</code> Set to <i>true</i> or <i>false</i> to enable or disable IP security.</li> <li>• <code>--portal_service_name portal_service_name</code>.</li> <li>• <code>-s, --server management_server</code>.</li> </ul> <p>For more information, see <a href="#">Using the ip-security-enabled command</a>.</p>
<code>apic modules</code>	Manage your modules.	<ul style="list-style-type: none"> <li>• <code>apic modules:delete</code> - Delete modules.</li> <li>• <code>apic modules:disable</code> - Disable modules.</li> <li>• <code>apic modules:enable</code> - Enable modules.</li> <li>• <code>apic modules:list</code> - Get a list of your modules.</li> </ul> <p>For more information, see <a href="#">Using the modules commands</a>.</p>
<code>apic php-memory</code>	Manage your php-memory.	<ul style="list-style-type: none"> <li>• <code>apic php-memory:list</code> - List the PHP memory limit on the platform.</li> <li>• <code>apic php-memory:update</code> - Set the PHP memory limit on the portal platform.</li> <li>• <code>-s, --server mgmt_endpoint_url</code>. Use the value of the platform API endpoint URL for this entry.</li> <li>• <code>--debug</code>. If you need debug information.</li> </ul> <p>For more information, see <a href="#">Using the php-memory commands</a>.</p>
<code>apic platforms</code>	Manage your platforms.	<ul style="list-style-type: none"> <li>• <code>apic platforms:list</code> - List the platforms of a portal service.</li> <li>• <code>-s, --server management_server</code>.</li> <li>• <code>--portal_service_name portal_service_name</code></li> <li>• <code>--format format</code>. The options are <code>json</code> or <code>yaml</code>.</li> </ul> <p>For more information, see <a href="#">Using the platforms commands</a>.</p>
<code>apic product</code>	Manage your product.	<ul style="list-style-type: none"> <li>• <code>apic product:get</code> - Get a product from a portal service.</li> <li>• <code>apic product:get-document</code> - Get a specific entire product document from the portal of the given organization and catalog.</li> <li>• <code>apic product:list</code> - List the products on a portal service.</li> <li>• <code>-s, --server mgmt_endpoint_url</code>. Use the value of the platform API endpoint URL for this entry.</li> <li>• <code>--org orgid</code></li> <li>• <code>--catalog catalog id</code>.</li> <li>• <code>--debug</code>. If you need debug information.</li> </ul> <p>For more information, see <a href="#">Using the product commands</a>.</p>
<code>apic security</code>	Manage your security.	<ul style="list-style-type: none"> <li>• <code>apic security:clear-bans</code> - Clear all of the banned user/IP addresses on a portal site.</li> <li>• <code>-s, --server mgmt_endpoint_url</code>. Use the value of the platform API endpoint URL for this entry.</li> <li>• <code>--org orgid</code></li> <li>• <code>--catalog catalog id</code>.</li> </ul> <p>For more information, see <a href="#">Using the security command</a>.</p>
<code>apic service-ip-allowlist</code>	Manage your <code>service-ip-allowlist</code> , which enables specific IP addresses to be exempt from being blocked by portal security checks.	<ul style="list-style-type: none"> <li>• <code>apic service-ip-allowlist:add</code> - Add specific IP addresses to the <code>allowlist</code>.</li> <li>• <code>apic service-ip-allowlist:delete</code> - Delete all of the IP addresses from the <code>allowlist</code>.</li> <li>• <code>apic service-ip-allowlist:list</code> - List all of the IP addresses that are currently on the <code>allowlist</code>.</li> <li>• <code>apic service-ip-allowlist:remove</code> - Remove one or more specific IP addresses from the <code>allowlist</code>.</li> </ul> <p>For more information, see <a href="#">Using the service-ip-allowlist commands</a>.</p>
<code>apic site</code>	Manage your site.	<ul style="list-style-type: none"> <li>• <code>site:cache-rebuild</code> - Rebuild the cache of a portal site.</li> <li>• <code>apic site:check</code> - Run a platform check against a portal site.</li> <li>• <code>apic site:state</code> - Obtain the current state of a portal site.</li> <li>• <code>-s, --server management_server</code>.</li> <li>• <code>--org orgid</code></li> <li>• <code>--catalog catalog id</code>.</li> <li>• <code>--format format</code>. The options are <code>json</code> or <code>yaml</code>.</li> </ul> <p>For more information, see <a href="#">Using the site commands</a>.</p>

Command	Description	Subcommands
<code>apic site-config</code>	Manage your <code>site-config</code> .	<ul style="list-style-type: none"> <li><code>apic site-config:create-export</code> - Create an export of a <code>site config</code>.</li> <li><code>apic site-config:create-import</code> - Create an import of a <code>site config</code>.</li> <li><code>apic site-config:delete-export</code> - Delete an export of a <code>site config</code>.</li> <li><code>apic site-config:delete-import</code> - Delete an import of a <code>site config</code>.</li> <li><code>apic site-config:get-export</code> - Get an export of a <code>site config</code>.</li> <li><code>apic site-config:get-export-status</code> - Get the status of an export of a <code>site config</code>.</li> <li><code>apic site-config:get-import-status</code> - Get the status of an import of a <code>site config</code>.</li> </ul> <p>For more information, see <a href="#">Using the site-config commands</a>.</p>
<code>apic sites</code>	Manage your <code>sites</code> .	<ul style="list-style-type: none"> <li><code>apic sites:check</code> - Run a platform check against all portal sites on a portal service.</li> <li><code>apic sites:list</code> - List the sites of a portal service.</li> </ul> <p><code>-s, --server management_server.</code>  <code>--portal_service_name portal_service_name</code>  <code>--format format</code>. The options are <code>json</code> or <code>yaml</code>.</p> <p>For more information, see <a href="#">Using the sites commands</a>.</p>
<code>apic themes</code>	Manage your <code>themes</code> .	<ul style="list-style-type: none"> <li><code>apic themes:delete</code> - Delete themes.</li> <li><code>apic themes:disable</code> - Disable themes.</li> <li><code>apic themes:enable</code> - Enable themes.</li> <li><code>apic themes:list</code> - Get a list of your themes.</li> <li><code>apic themes:set-default</code> - Set the default theme of the portal.</li> </ul> <p>For more information, see <a href="#">Using the themes commands</a>.</p>
<code>apic twig</code>	Manage the <code>twig</code> debugging operations on a specific portal site.	<ul style="list-style-type: none"> <li><code>apic twig:debug-enable</code> - Enable twig debugging for a portal site.</li> <li><code>apic twig:debug-disable</code> - Disable twig debugging for a portal site.</li> <li><code>apic twig:debug-status</code> - Get the current state of twig debugging for a specific site.</li> </ul> <p>For more information, see <a href="#">Using the twig commands</a>.</p>
<code>apic version</code>	Get the version of your API Connect toolkit.	<ul style="list-style-type: none"> <li><code>apic version --mode portaladmin</code> - Get toolkit version.</li> </ul>

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Using the api commands

You can use the `api` commands to get and list the APIs on your Developer Portal service.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`.

For full details of the `apic login` command, see [Logging in to a management server](#).

2. List the APIs from a site.

For example,

```
apic --mode portaladmin api:list --org orgid/name --server management_server --catalog catalogid/name
```

- `management_server` is the endpoint URL of the management server (required).

- `catalogid/name` is the ID or name of the catalog that the site belongs to (required).
  - `orgid/name` is the ID or name of the provider organization that the catalog belongs to (required).
  - `format_type` is the output format. Can be `json`, `yaml`, `go-template=...`, `go-template-file=...`. Defaults to `yaml`.
3. Get an API from a site by using the `id` or `name:version`.

For example,

```
apic --mode portaladmin api:get --org orgid/name --server management_server --catalog catalogid/name id/name:version
```

- `id/name:version` - The ID or name:version of a specific API (required). For example, `id-of-api-called-example-3` or `example:3.0.0`.

4. Get a specific entire API document from the portal of the provided organization and catalog by using the `id` or `name:version`.

```
apic --mode portaladmin api:get-document --org orgid/name --server management_server --catalog catalogid/name --format format_type id/name:version
```

For example:

```
apic --mode portaladmin api:get-document --org ibm --server my.management.server.com --catalog portal-test --format yaml intuiz-api:1.0.0
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Using the apic-config commands

You can use the **apic-config** commands to get the apic config of your Developer Portal service.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`.

For full details of the `apic login` command, see [Logging in to a management server](#).

2. Get the apic config of a site.

For example,

```
apic --mode portaladmin apic-config:get --org orgid/name --server management_server --catalog name/id
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Using the application commands

You can use the **application** commands to get and list the applications on your Developer Portal service.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
```

```
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`. For full details of the `apic login` command, see [Logging in to a management server](#).

2. List the applications on a site.  
For example,

```
apic --mode portaladmin application:list --org orgid/name --server management_server --catalog name/id
```

3. Get an application from a site by using application id.  
For example,

```
apic --mode portaladmin application:get --org orgid/name --server management_server --catalog name/id id
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the backups commands

You can use the **backups** commands to list the backups on your Developer Portal service.

1. Log in as Cloud manager:

```
apic login --server management_server --realm admin/identity_provider --username cloud_username --password cloud_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope admin --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope admin --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: admin/default-idp-1
- title: Corporate LDAP user registry
  realm: admin/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default Cloud Manager Local User Registry for login as a member of the cloud administration organization is `default-idp-1`. For full details of the `apic login` command, see [Logging in to a management server](#).

2. Get the availability zone of the portal service's backups that you want to list:

```
apic availability-zones --org orgid/name --server management_server
```

3. List all the portal services in that availability zone

```
apic portal-services:list --org orgid/name --server management_server --availability-zone availability_zone
```

4. Get the selected portal service's name

```
apic portal-services:get --org orgid/name --server management_server --availability-zone availability_zone PORTAL-SERVICE-NAME
```

5. List the backups of the portal service

```
apic --mode portaladmin backups:list --server management_server --portal_service_name PORTAL-SERVICE-NAME --format json
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the consumer-org commands

You can use the **consumer-org** commands to get and list the consumer orgs on your Developer Portal service.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`.

For full details of the `apic login` command, see [Logging in to a management server](#).

2. List the consumer orgs of a site.

For example,

```
apic --mode portaladmin consumer-org:list --org orgid/name --server management_server --catalog name/id
```

3. Get a consumer org from a site by using org id.

For example,

```
apic --mode portaladmin consumer-org:get --org orgid/name --server management_server --catalog name/id id
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the custom-module commands

You can use the **custom-module** commands to create exports and imports, delete exports and imports, get the status of an export or import, and get an export, on your Developer Portal service.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`.

For full details of the `apic login` command, see [Logging in to a management server](#).

2. Export your custom modules.

The **custom-module:create-export** command creates an export task against the portal of the specified `catalog` and `org`. The command then polls the status of the task until it has **FINISHED** and the artifacts are streamed back.

**Note:** The command continues to poll until the maximum polling time of 15 minutes is reached. At which point you can use the commands **custom-module:get-export-status** and **custom-module:get-export** to get the status and potentially an artifact.

```
apic --mode portaladmin custom-module:create-export --catalog name/id --org orgid/name --server management_server
```

- The module `.tgz` is saved to the directory in which you ran the command.
- The saved `.tgz` has the format `custom_module_createExport-20200217134637.tgz`.
- You can save your exports into your change control management system.

For example,

```
apic --mode portaladmin custom-module:create-export --catalog dev --org ibm --server api.stagingexample.com
```

3. Import your custom modules.

The **custom-module:create-import** command uses the supplied `.tgz` file to import the custom modules into the portal of the specified `catalog` and `org`. The command then polls the status of the task until the task has either **FINISHED** successfully, or failed because of an error.

Note:

- The higher level folders of the archive can contain only these characters, a-z and 0-9.
- The command continues to poll until the maximum polling time of 15 minutes is reached. At which point you can use the command **custom-module:get-import-status** to get the status of the import.
- If you import a custom module that already exists you overwrite the existing custom module.

```
apic --mode portaladmin custom-module:create-import --catalog name/id --org orgid/name --server management_server /PATH/TO/MODULE/TGZ
```

For example,

```
apic --mode portaladmin custom-module:create-import --catalog prod --org ibm --server api.productionexample.com C:/users/example/desktop/custom_module_createExport-20200217134637.tgz
```

4. You can run the delete command to cancel any ongoing or recently created import or export tasks. Any temporarily created artifacts will be deleted from the portal filesystem. No custom modules are deleted.

For example,

```
apic --mode portaladmin custom-module:delete-export --catalog name/id --org orgid/name --server management_server --format json --task_id string
```

```
apic --mode portaladmin custom-module:delete-import --catalog name/id --org orgid/name --server management_server --format json --task_id string
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the custom-theme commands

You can use the **custom-theme** commands to create export and import tasks, delete export and import tasks, get the status of an export or import task, and get an export artifact, on your Developer Portal service.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`.

For full details of the `apic login` command, see [Logging in to a management server](#).

2. Export your custom themes.

The **custom-theme:create-export** command creates an export task against the portal of the specified `catalog` and `org`. The command then polls the status of the task until it has **FINISHED** and the artifacts are streamed back.

Note: The command continues to poll until the maximum polling time of 15 minutes is reached. At which point you can use the commands **custom-theme:get-export-status** and **custom-theme:get-export** to get the status and potentially an artifact.

```
apic --mode portaladmin custom-theme:create-export --catalog name/id --org orgid/name --server management_server
```

- The theme `.tgz` is saved to the directory in which you ran the command.
- The saved `.tgz` has the format `custom_theme_createExport-20200217134637.tgz`.
- You can save your exports into your change control management system.

For example,

```
apic --mode portaladmin custom-theme:create-export --catalog dev --org ibm --server api.stagingexample.com
```

3. Import your custom themes.

The **custom-theme:create-import** command uses the supplied `.tgz` file to import the custom themes into the portal of the specified `catalog` and `org`. The command then polls the status of the task until the task has either **FINISHED** successfully, or failed because of an error.

Note:

- The higher level folders of the archive can contain only these characters, a-z and 0-9.
- The command continues to poll until the maximum polling time of 15 minutes is reached. At which point you can use the command **custom-theme:get-import-status** to get the status of the import.
- If you import a custom theme that already exists you overwrite the existing custom theme.

```
apic --mode portaladmin custom-theme:create-import --catalog name/id --org orgid/name --server management_server /PATH/TO/theme/TGZ
```

For example,

```
apic --mode portaladmin custom-theme:create-import --catalog prod --org ibm --server api.productionexample.com
C:/users/example/desktop/custom_theme_createExport-20200217134637.tgz
```

4. You can run the delete command to cancel any ongoing or recently created import or export tasks. Any temporarily created artifacts will be deleted from the portal filesystem. No custom themes are deleted.

For example,

```
apic --mode portaladmin custom-theme:delete-export --catalog name/id --org orgid/name --server management_server --format
json --task_id string

apic --mode portaladmin custom-theme:delete-import --catalog name/id --org orgid/name --server management_server --format
json --task_id string
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the custom-translation commands

You can use the **custom-translation** commands to create an import or export task that will import or export a .tgz of custom translations for a Developer Portal site. You can also delete the export and import tasks, get the status of an export or import task, and get a custom translation export artifact.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password
provider_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`.

For full details of the `apic login` command, see [Logging in to a management server](#).

2. Export your custom translations.

The **custom-translation:create-export** command creates an export task against the portal of the specified `catalog` and `org`, to export an archive of the custom translations of the site. The command then polls the status of the task until it has **FINISHED** and the artifacts are streamed back. The task ID is printed to the terminal.

Note:

- The command continues to poll until the maximum polling time of 15 minutes is reached. At which point you can use the commands **custom-translation:get-export-status** and **custom-translation:get-export** to get the status and potentially an artifact.
- The translation .tgz archive is saved to the directory in which you ran the command.
- The saved .tgz has the format `custom_translation_createExport-20210217134637.tgz`.
- You can save your exports into your change control management system.

```
apic --mode portaladmin custom-translation:create-export --catalog catalogid/name --org orgid/name --server
management_server
```

- `catalogid/name` is the ID or name of the catalog that the site belongs to (required).
- `orgid/name` is the ID or name of the provider organization that the catalog belongs to (required).
- `management_server` is the endpoint URL of the management server (required).
- `--langcodes` is a comma separated list of the language codes, for example `es, zh-hans`. You can use this option to specify which custom translations to export.
- `--no-poll` can be used to stop the command from polling the task, and just return the task ID.

For example:

```
apic --mode portaladmin custom-translation:create-export --catalog dev --org ibm --server api.stagingexample.com
```

3. Import your custom translations.

The **custom-translation:create-import** command uses the supplied .tgz file to create a task to import the custom translations into the portal of the specified `catalog` and `org`. The command then polls the status of the task until the task has either **FINISHED** successfully, or failed because of an error. The task ID is printed to the terminal.

Note:

- The .tgz archive must contain only .po translation files, and nothing else.
- The command continues to poll until the maximum polling time of 15 minutes is reached. At which point you can use the command **custom-translation:get-import-status** to get the status of the import.
- If you import a custom translation that already exists, the existing custom translation is overwritten.

```
apic --mode portaladmin custom-translation:create-import --catalog catalogid/name --org orgid/name --server management_server /PATH/TO/MODULE/TGZ
```

- `--no-poll` can be used to stop the command from polling the task, and just return the task ID.

For example:

```
apic --mode portaladmin custom-translation:create-import --catalog prod --org ibm --server api.productionexample.com C:/users/example/desktop/custom_translation_createExport-20210217134637.tgz
```

4. You can run the delete command to cancel any ongoing or recently created import or export tasks. Any temporarily created artifacts will be deleted from the portal filesystem. No custom translations are deleted.

For example,

```
apic --mode portaladmin custom-translation:delete-export --catalog catalogid/name --org orgid/name --server management_server --format json --task_id taskid
```

```
apic --mode portaladmin custom-translation:delete-import --catalog catalogid/name --org orgid/name --server management_server --format json --task_id taskid
```

- `taskid` is the ID of the import or export task that was created on the queue (required).
- `--format` is the output format that can be seen if you run the command with debug. Can be `json`, `yaml`, `go-template=...`, `go-template-file=...`. Defaults to `yaml`.

For example:

```
apic --mode portaladmin custom-translation:delete-import --catalog prod --org ibm --server api.productionexample.com --task_id 4hythbptta6z91yx
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the custom-webserver-page commands

You can use the **custom-webserver-page** commands to customize the web server error pages on your Developer Portal service.

The **custom-webserver-page** commands enable you to set, get, and delete custom HTML content for the web server error pages of index, 404, 40x, and 50x. You can embed base64 encoded images, such as .svg and .png, or inline .svg images in your content, but the maximum size of the content of each error page is 8 MB.

Note:

- The custom web server error pages that can be set by using the **custom-webserver-page** commands, are the pages that are returned when the URL of a specific portal site isn't used. For example, if your portal site was `https://example.com/myorg/dev`, but you went to `https://example.com/myorg/deb`, then this is when a custom 404 error page is returned. However, if the requested URL matches a portal site, then the web server will use the Drupal error handlers, and will respond according to the Drupal configuration.
- All custom content that you set must conform to the HTML5 specification. If you try to set custom content that doesn't conform to HTML5, it will fail with the following error message:

```
Error: The supplied custom HTML failed validation.
```

- Setting and deleting custom web server pages can take several minutes to complete, depending on the size of the content.

1. Log in as Cloud manager:

```
apic login --server management_server --realm admin/identity_provider --username admin --password cloud_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope admin --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope admin --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: admin/default-idp-1
- title: Corporate LDAP user registry
  realm: admin/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default Cloud Manager Local User Registry for login as a member of the cloud administration organization is `default-idp-1`.

For full details of the `apic login` command, see [Logging in to a management server](#).

2. Set a custom HTML web server error page on the Developer Portal. The maximum size of the page is 8 MB, and you must ensure that the content conforms to the HTML5 specification, or the **custom-webserver-page:set** command will fail with a validation error.

```
apic --mode portaladmin custom-webserver-page:set --server management_server --portal_service_name portal --page_type page_type filename.html
```

- `management_server` is the endpoint URL of the management server (required).
- `portal` is the name of the portal service (required).
- `page_type` is the type of web server error page that you want to run the command against (required). Valid values are `index`, `404`, `40x`, or `50x`.
- `filename` is the name of the HTML file that contains the content for the custom web server error page.

For example, the following screen capture shows a standard 404 web server response:

## 404 Not Found

Then the following `custom-webserver-page:set` command is run:

```
apic --mode portaladmin custom-webserver-page:set --server my.management.server.com --portal_service_name portal --page_type 404 custom-404.html
Loading File (Large files may take a while)...
```

Successfully added the custom HTML content for page type 404.

The following custom 404 error page is now displayed:

Error 404

Hmm, we can't seem to find that.

3. Get the custom content of a specific page type and save it to a file named <page\_type>-timestamp.html.

```
apic --mode portaladmin custom-webserver-page:get --server management_server --portal_service_name portal --page_type page_type
```

For example:

```
apic --mode portaladmin custom-webserver-page:get --server my.management.server.com --portal_service_name portal --page_type 404
Incoming project saved to 404-20211027121830.html
```

If there is no custom content available for the page type, the following error is displayed:

```
apic --mode portaladmin custom-webserver-page:get --server my.management.server.com --portal_service_name portal --page_type 50x
Error: There is currently no custom HTML content for page type 50x.
```

4. Delete the custom content of a specific page type. If there is no custom content available for a page type, the error response defaults to the standard web server error page.

```
apic --mode portaladmin custom-webserver-page:delete --server management_server --portal_service_name portal --page_type page_type
```

For example:

```
apic --mode portaladmin custom-webserver-page:delete --server my.management.server.com --portal_service_name portal --page_type 404
The custom HTML content for page type 404 has been deleted.
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Using the drupal-config commands

You can use the `drupal-config` commands to list, get the values of, set values, create new, and delete the Drupal configuration objects on your Developer Portal service.

For example, you can use the `drupal-config` commands to disable CSS and JS aggregation to help with twig debug, see [Example](#).

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`.

For full details of the `apic login` command, see [Logging in to a management server](#).

2. List all of the available Drupal config for a site.

```
apic --mode portaladmin drupal-config:list --server management_server --catalog catalogid/name --org orgid/name --format format_type
```

- `management_server` is the endpoint URL of the management server (required).
- `catalogid/name` is the ID or name of the catalog that the site belongs to (required).
- `orgid/name` is the ID or name of the provider organization that the catalog belongs to (required).
- `format_type` is the output format. Can be `json`, `yaml`, `go-template=...`, `go-template-file=...`. Defaults to `yaml`.

For example:

```
apic --mode portaladmin drupal-config:list --server my.management.server.com --org ibm --catalog portal-test --format yaml
admin_toolbar_tools.settings:
  name: admin_toolbar_tools.settings
adminimal_admin_toolbar.settings:
  name: adminimal_admin_toolbar.settings
advagg.settings:
  name: advagg.settings
advagg_css_minify.settings:
  name: advagg_css_minify.settings
advagg_js_minify.settings:
  name: advagg_js_minify.settings
autologout.settings:
  name: autologout.settings
...
```

Note that the example has been reduced as the full response is very large.

3. List a specific Drupal config for a site.

```
apic --mode portaladmin drupal-config:list --server management_server --catalog catalogid/name --org orgid/name --prefix config_prefix --format format_type
```

- `config_prefix` is the prefix of the Drupal config, for example `system`. If omitted, the command returns all config names in the system.

For example:

```
apic --mode portaladmin drupal-config:list --server my.management.server.com --org ibm --catalog portal-test --format yaml --prefix system.theme
system.theme:
  name: system.theme
system.theme.global:
  name: system.theme.global
```

4. Update a Drupal config key value.

```
apic --mode portaladmin drupal-config:set --server management_server --catalog catalogid/name --org orgid/name --config_name config_name --config_key config_key --config_value config_value
```

- `config_name` is the name of the Drupal config object, for example `system.site` (required).
- `config_key` is the Drupal config key, for example `page.front` (required).
- `config_value` is the value to assign to the config key (required).

For example, to set the default theme to `bartik`:

```
apic --mode portaladmin drupal-config:set --server my.management.server.com --org ibm --catalog portal-test --config_name system.theme --config_key default --config_value bartik
// Do you want to update default key in system.theme config?: yes.
```

5. Create a new Drupal config key and set the value.

```
apic --mode portaladmin drupal-config:set --server management_server --catalog catalogid/name --org orgid/name --config_name config_name --config_key new_config_key --config_value new_config_value
```

For example, to create a new config key and set the value in the `system.site` config object:

```
apic --mode portaladmin drupal-config:set --server my.management.server.com --org ibm --catalog portal-test --config_name system.site --config_key new_key --config_value new_value
// new_key key does not exist in system.site config. Do you want to create a new config key?: yes.
```

6. Get all of the key values for a Drupal config object.

```
apic --mode portaladmin drupal-config:get --server management_server --catalog catalogid/name --org orgid/name --format format_type --config_name config_name
```

For example, to find out what themes are available:

```
apic --mode portaladmin drupal-config:get --server my.management.server.com --org ibm --catalog portal-test --format json --config_name system.theme
{
  "admin": "seven",
  "default": "bartik",
  "_core": {
    "default_config_hash": "fOjer9hADYYnbCJVZMFZIIIMlazTFWyg84ZkFDHfAbUg"
  },
  "defaultplus": "bartisk"
}
```

7. Get the value of a specific key for a Drupal config object.

```
apic --mode portaladmin drupal-config:get --server management_server --catalog catalogid/name --org orgid/name --format format_type --config_name config_name --config_key config_key
```

For example, to find out what the default theme is:

```
apic --mode portaladmin drupal-config:get --server my.management.server.com --org ibm --catalog portal-test --format json --config_name system.theme --config_key default
{
  "system.theme:default": "bartik"
}
```

8. Delete a Drupal config object, or a specific config key and its value.

```
apic --mode portaladmin drupal-config:delete --server management_server --catalog catalogid/name --org orgid/name --config_name config_name --config_key config_key
```

- `config_key` is the Drupal config key, for example `page.front` (optional).

For example, to delete the config key `new_key` and its value:

```
apic --mode portaladmin drupal-config:delete --server my.management.server.com --org ibm --catalog portal-test --config_name system.site --config_key new_key
The config object/value was successfully deleted.
```

## Example

The following scenario gives an example of how to turn off CSS and JS aggregation to help with twig debug. However, on a production system aggregation should be enabled for performance reasons.

1. Check the settings for performance, which include settings for CSS and JS aggregation:

```
apic --mode portaladmin drupal-config:get --server management_server --catalog catalogid/name --org orgid/name --config_name system.performance
```

2. Check the settings for advanced aggregation:

```
apic --mode portaladmin drupal-config:get --server management_server --catalog catalogid/name --org orgid/name --config_name advagg.settings
```

3. Turn off CSS aggregation:

```
apic --mode portaladmin drupal-config:set --server management_server --catalog catalogid/name --org orgid/name --config_name system.performance --config_key css.preprocess --config_value 0
```

4. Turn off JS aggregation:

```
apic --mode portaladmin drupal-config:set --server management_server --catalog catalogid/name --org orgid/name --config_name system.performance --config_key js.preprocess --config_value 0
```

5. Turn off advanced aggregation (this setting is needed for the previous aggregation settings to apply):

```
apic --mode portaladmin drupal-config:set --server management_server --catalog catalogid/name --org orgid/name --config_name advagg.settings --config_key enabled --config_value 0
```

6. Then, rebuild the cache:

```
apic --mode portaladmin site:cache-rebuild --server management_server --catalog catalogid/name --org orgid/name
```

When loading the site in a browser, you should now see CSS and JS aggregation is disabled when using development tools for site debug or customization.

Note:

- Disabling aggregation affects site performance, so if the site goes into production remember to turn aggregation back on again.
- Although the settings are shown as `true` or `false`, to set them by using the `drupal-config:set` command, you must apply a value of 1 for `true`, and 0 for `false`.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the entity commands

You can use the **entity** commands to get the entity count on your Developer Portal service.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`.

For full details of the `apic login` command, see [Logging in to a management server](#).

2. Get the entity count for a site.

For example,

```
apic --mode portaladmin entity:count --org orgid/name --server management_server --catalog name/id
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the factory-reset command

You can use the **factory-reset** command to perform a factory reset of your Developer Portal, which will delete the portal service and all of its associated Developer Portal sites.

Warning: The **factory-reset** command is irreversible. You must ensure that you have backups created before running this command.

1. Log in as Cloud manager:

```
apic login --server management_server --realm admin/identity_provider --username admin --password cloud_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope admin --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope admin --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: admin/default-idp-1
- title: Corporate LDAP user registry
  realm: admin/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default Cloud Manager Local User Registry for login as a member of the cloud administration organization is `default-idp-1`.

For full details of the `apic login` command, see [Logging in to a management server](#).

2. Output a dry run status of a Developer Portal factory reset:

```
apic --mode portaladmin factory-reset:delete --server management_server --portal_service_name portal
```

- `management_server` is the endpoint URL of the management server.
- `portal` is the name of the portal service.

3. Perform a factory reset of the Developer Portal, deleting the portal service and all of its associated Developer Portal sites:

Warning: The **factory-reset** command is irreversible. You must ensure that you have backups created before running this command.

```
apic --mode portaladmin factory-reset:delete --server management_server --portal_service_name portal --execute_reset true
```

- `--execute_reset` must be set to `true` to trigger the Developer Portal reset.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Using the ip-security-enabled command

You can use the **ip-security-enabled** commands to toggle IP security on your Developer Portal. When IP security is enabled, modules such as the Drupal Perimeter Defence module, or flood control, will block client IP addresses suspected of malicious behavior, as expected. Banned IP addresses can be cleared by using the **security:clear-bans** command. You might want to turn off IP security if you are performing penetration tests, or if you cannot pass through the client IP address from your external load balancer. Note that IP security is enabled by default on the Developer Portal.

1. Log in as Cloud manager:

```
apic login --server management_server --realm admin/identity_provider --username admin --password cloud_password
```

You can determine which identity provider to use in the **--realm** parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope admin --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope admin --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: admin/default-idp-1
- title: Corporate LDAP user registry
  realm: admin/corporate-ldap
```

The **title** value should enable you to determine which identity provider to use; you can then copy the corresponding **--realm** parameter directly from the displayed **realm** value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default Cloud Manager Local User Registry for login as a member of the cloud administration organization is **default-idp-1**.

For full details of the **apic login** command, see [Logging in to a management server](#).

2. Enable IP security on the Developer Portal:

```
apic --mode portaladmin ip-security-enabled:update --server management_server --portal_service_name portal --enabled true
```

- **management\_server** is the endpoint URL of the management server.
- **portal** is the name of the portal service.
- **--enabled** is set to **true** to enable IP security. Can be set to **false** to disable IP security.

For example:

```
apic --mode portaladmin ip-security-enabled:update --server my.management.server.com --portal_service_name my_portal_service --enabled true
IP security has been successfully set to true
```

3. Disable IP security on the Developer Portal:

```
apic --mode portaladmin ip-security-enabled:update --server management_server --portal_service_name portal --enabled false
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Using the modules commands

You can use the **modules** commands to list, enable, disable, and delete the modules on your Developer Portal service.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the **--realm** parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The **title** value should enable you to determine which identity provider to use; you can then copy the corresponding **--realm** parameter directly from the displayed **realm** value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is **default-idp-2**.

For full details of the **apic login** command, see [Logging in to a management server](#).

2. List the modules from a *packagename*.

For example,

```
apic --mode portaladmin modules:list --org orgid/name --server management_server --catalog name/id --package packagename1,packagename2
```

3. Enable the *modulename* module. You can upload this module by using the **custom-module:create-import** command. For more information, see [Using the custom-module commands](#).

For example,

```
apic --mode portaladmin modules:enable --org orgid/name --server management_server --catalog name/id --modules modulename
```

4. Disable the *modulename* module. If you disable a module, you must also disable all its dependencies.

For example,

```
apic --mode portaladmin modules:disable --org orgid/name --server management_server --catalog name/id --modules modulename,module_lib
```

5. Delete the *modulename* module. The module and all its dependencies must be disabled before you can delete them.

For example,

```
apic --mode portaladmin modules:delete --org orgid/name --server management_server --catalog name/id --modules modulename
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the php-memory commands

You can use the **php-memory** commands to list or update the PHP memory limits on your Developer Portal.

1. Log in as Cloud manager:

```
apic login --server management_server --realm admin/identity_provider --username cloud_username --password cloud_password
```

You can determine which identity provider to use in the **--realm** parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope admin --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope admin --server myserver.com --fields title,realm
total results: 2
results:
- title: Cloud Manager User Registry
  realm: admin/default-idp-1
- title: Corporate LDAP user registry
  realm: admin/corporate-ldap
```

The **title** value should enable you to determine which identity provider to use; you can then copy the corresponding **--realm** parameter directly from the displayed **realm** value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default Cloud Manager Local User Registry for login as a member of the cloud administration organization is **default-idp-1**.

For full details of the **apic login** command, see [Logging in to a management server](#).

2. Get the availability zone of the portal service's sites that you want to list:

```
apic availability-zones --org orgid/name --server management_server
```

3. List all the portal services in that availability zone:

```
apic portal-services:list --org orgid/name --server management_server --availability-zone availability_zone
```

4. Get the selected portal service's name:

```
apic portal-services:get --org orgid/name --server management_server --availability-zone availability_zone PORTAL-SERVICE-NAME
```

5. List the current PHP memory limits on the Developer Portal platform:

```
apic --mode portaladmin php-memory:list --server management_server --portal_service_name PORTAL-SERVICE-NAME
```

You receive output like this example:

```
Current web memory is set to: 768M
Current admin memory is set to: 768M
```

6. Update the current PHP memory limits on the Developer Portal platform:

```
apic --mode portaladmin php-memory:update --server management_server --portal_service_name PORTAL-SERVICE-NAME --memory_value 1024
```

You receive output like this example:

```
Setting php memory limit to 1024M within the database
Setting php memory limit to 1024M in /var/devportal/storerosync/php.ini
Setting php memory limit to 1024M in /web/local/php_config/php.ini
Done
```

Note: Consider the memory resource limits that are allocated to your Developer Portal pods before you set this value. Setting this value too high can result in the portal pods restarting because the containers request more memory than is allowed by Kubernetes. Setting the value too low can result in the internal portal processes failing because of lack of available memory.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the platforms commands

You can use the **platforms** commands to list the platforms on your Developer Portal service.

1. Log in as Cloud manager:

```
apic login --server management_server --realm admin/identity_provider --username cloud_username --password cloud_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope admin --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope admin --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: admin/default-idp-1
- title: Corporate LDAP user registry
  realm: admin/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default Cloud Manager Local User Registry for login as a member of the cloud administration organization is `default-idp-1`.

For full details of the `apic login` command, see [Logging in to a management server](#).

2. Get the availability zone of the portal service's platforms that you want to list:

```
apic availability-zones --org orgid/name --server management_server
```

3. List all the portal services in that availability zone

```
apic portal-services:list --org orgid/name --server management_server --availability-zone availability_zone
```

4. Get the selected portal service's name

```
apic portal-services:get --org orgid/name --server management_server --availability-zone availability_zone PORTAL-SERVICE-NAME
```

5. List the platforms of the portal service

```
apic --mode portaladmin platforms:list --server management_server --portal_service_name PORTAL-SERVICE-NAME --format json
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the product commands

You can use the **product** commands to get and list the products on your Developer Portal service.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`. For full details of the `apic login` command, see [Logging in to a management server](#).

2. Get a list of products from a site.  
For example,

```
apic --mode portaladmin product:list --org orgid/name --server management_server --catalog catalogid/name
```

- `management_server` is the endpoint URL of the management server (required).
- `catalogid/name` is the ID or name of the catalog that the site belongs to (required).
- `orgid/name` is the ID or name of the provider organization that the catalog belongs to (required).
- `format_type` is the output format. Can be `json`, `yaml`, `go-template=...`, `go-template-file=...`. Defaults to `yaml`.

3. Get a product from a site by using the `id` or `name:version`.  
For example,

```
apic --mode portaladmin product:get --org orgid/name --server management_server --catalog catalogid/name id/name:version
```

- `id/name:version` - The ID or name:version of a specific product (required). For example, `id-of-product-called-example-3` or `example:3.0.0`.

4. Get a specific entire product document from the portal of the provided organization and catalog by using the `id` or `name:version`.

```
apic --mode portaladmin product:get-document --org orgid/name --server management_server --catalog catalogid/name --format format_type id/name:version
```

For example:

```
apic --mode portaladmin product:get-document --org ibm --server my.management.server.com --catalog portal-test --format yaml intuiz-product:1.0.0
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the security command

You can use the `security` command to clear all of the banned user/IP addresses on a Developer Portal site.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`. For full details of the `apic login` command, see [Logging in to a management server](#).

2. Clear all of the user and IP addresses that are currently banned on a particular portal site:

```
apic --mode portaladmin security:clear-bans --server management_server --catalog catalogid/name --org orgid/name
```

- `management_server` is the endpoint URL of the management server.
- `catalogid/name` is the ID or name of the catalog that the site belongs to.
- `orgid/name` is the ID or name of the provider organization that the catalog belongs to.

For example:

```
apic --mode portaladmin security:clear-bans --server my.management.server.com --catalog portal-test --org ibm
[notice] All bans cleared.
```

Note: You can also manage banned IP addresses by using the Developer Portal UI. For more information, see [Managing banned IP addresses](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Using the service-ip-allowlist commands

You can use the **service-ip-allowlist** commands to add, remove, and list the IP addresses on your Developer Portal **allowlist**. IP addresses that are on the **allowlist** are exempt from being blocked by Developer Portal security checks, for example, load balancer and proxy IPs.

1. Log in as Cloud manager:

```
apic login --server management_server --realm admin/identity_provider --username admin --password cloud_password
```

You can determine which identity provider to use in the **--realm** parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope admin --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope admin --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: admin/default-idp-1
- title: Corporate LDAP user registry
  realm: admin/corporate-ldap
```

The **title** value should enable you to determine which identity provider to use; you can then copy the corresponding **--realm** parameter directly from the displayed **realm** value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default Cloud Manager Local User Registry for login as a member of the cloud administration organization is **default-idp-1**.

For full details of the **apic login** command, see [Logging in to a management server](#).

2. Add one or more IP addresses to the **allowlist**:

```
apic --mode portaladmin service-ip-allowlist:add --server management_server --portal_service_name portal --ips "list_of_ips"
```

- **management\_server** is the endpoint URL of the management server.
- **portal** is the name of the portal service.
- **list\_of\_ips** is a comma separated list of the IP addresses that you want to add to the **allowlist**.

For example:

```
apic --mode portaladmin service-ip-allowlist:add --server my.management.server.com --portal_service_name my_portal_service --ips "123.456.34.56,123.456.46.67"
Successfully added IP: 123.456.34.56.
Successfully added IP: 123.456.46.67.
```

3. Delete all of the IP addresses that are currently on the **allowlist**:

```
apic --mode portaladmin service-ip-allowlist:delete --server management_server --portal_service_name portal
```

4. List all of the IP addresses that are currently on the **allowlist**:

```
apic --mode portaladmin service-ip-allowlist:list --server management_server --portal_service_name portal
```

5. Remove one or more IP addresses from the **allowlist**:

```
apic --mode portaladmin service-ip-allowlist:remove --server management_server --portal_service_name portal --ips "list_of_ips"
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Using the site commands

You can use the **site** commands to check the site on your Developer Portal service.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the **--realm** parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`. For full details of the `apic login` command, see [Logging in to a management server](#).

2. Check the site on your portal service. This command checks the file system, database, and API Manager on your portal site, which might identify platform-related problems on your portal site.

```
apic --mode portaladmin site:check --server management_server --catalog catalogid/name --org orgid/name --format format_type
```

- `management_server` is the endpoint URL of the management server (required).
- `catalogid/name` is the ID or name of the catalog that the site belongs to (required).
- `orgid/name` is the ID or name of the provider organization that the catalog belongs to (required).
- `format_type` is the output format. Can be `json`, `yaml`, `go-template=...`, `go-template-file=...`. Defaults to `yaml`.

3. Rebuild the cache of a specific portal site.

```
apic --mode portaladmin site:cache-rebuild --server management_server --catalog catalogid/name --org orgid/name
```

For example:

```
apic --mode portaladmin site:cache-rebuild --server my.management.server.com --org ibm --catalog portal-test [success] Cache rebuild complete.
```

4. Display the state of a portal site associated with a particular organization and catalog. This command is useful as a general health check of the site.

```
apic --mode portaladmin site:state --server management_server --catalog catalogid/name --org orgid/name --format format_type
```

```
apic --mode portaladmin site:state --server my.management.server.com --org ibm --catalog portal-test --format json {
  "alias": "ibm.portal-test.my.management.server.com",
  "check_state": "OK: 200",
  "content_refresh_required": false,
  "known_to_apim": 1,
  "platform": "platform_devportal_9_x_10_99_99_99_20210922_2000",
  "snapshot_first_requested": "0000-00-00 00:00:00",
  "snapshots_failed_processing_since_last_success": 0,
  "snapshots_requested_since_last_received": 0,
  "state": "INSTALLED",
  "subscribed_to_webhooks": true,
  "url": "my.management.server.com/ibm/portal-test",
  "uuid": "cc0ad766-e372-4988-9d45-744eb8d381de.1cd9dc41-b08d-xyz"
}
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the site-config commands

You can use the `site-config` commands to create exports and imports, delete exports and imports, get the status of an export or import, and get an export, on your Developer Portal service.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username cloud_username --password cloud_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`. For full details of the `apic login` command, see [Logging in to a management server](#).

2. Export your site configs.

The `site-config:create-export` command creates an export task against the portal of the specified `catalog` and `org`. The command then polls the status of the task until it has `FINISHED` and the artifacts are streamed back.

Note: The command continues to poll until the maximum polling time of 15 minutes is reached. At which point you can use the commands `site-config:get-export-status` and `site-config:get-export` to get the status and potentially an artifact.

```
apic --mode portaladmin site-config:create-export --catalog name/id --org orgid/name --server management_server
```

- The site config .tgz is saved to the directory in which you ran the command.
- The saved .tgz has the format `site_config_createExport-20200217134637.tgz`.
- You can save your exports into your change control management system.

For example,

```
apic --mode portaladmin site-config:create-export --catalog dev --org ibm --server api.stagingexample.com
```

### 3. Import your site configs.

The `site-config:create-import` command uses the supplied .tgz file to import the site configs into the portal of the specified `catalog` and `org`. The command then polls the status of the task until the task has either **FINISHED** successfully, or failed because of an error.

Note: The higher level folders of the archive can contain only these characters, a-z and 0-9.

Note: The command continues to poll until the maximum polling time of 15 minutes is reached. At which point you can use the command `site-config:get-import-status` to get the status of the import.

```
apic --mode portaladmin site-config:create-import --catalog name/id --org orgid/name --server management_server /PATH/TO/SITE_CONFIG/TGZ
```

For example,

```
apic --mode portaladmin site-config:create-import --catalog prod --org ibm --server api.productionexample.com C:/users/example/desktop/site_config_createExport-20200217134637.tgz
```

### 4. You can run the delete command to cancel any ongoing or recently created import or export tasks. Any temporarily created artifacts will be deleted from the portal filesystem.

For example,

```
apic --mode portaladmin site-config:delete-export --catalog name/id --org orgid/name --server management_server --format json --task_id string
```

```
apic --mode portaladmin site-config:delete-import --catalog name/id --org orgid/name --server management_server --format json --task_id string
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details.

For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the sites commands

You can use the `sites` commands to check and list the sites on your Developer Portal service.

### 1. Log in as Cloud manager:

```
apic login --server management_server --realm admin/identity_provider --username cloud_username --password cloud_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope admin --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope admin --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: admin/default-idp-1
- title: Corporate LDAP user registry
  realm: admin/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default Cloud Manager Local User Registry for login as a member of the cloud administration organization is `default-idp-1`.

For full details of the `apic login` command, see [Logging in to a management server](#).

### 2. Get the availability zone of the portal service's sites that you want to list.

```
apic availability-zones --org orgid/name --server management_server
```

### 3. List all the portal services in that availability zone.

```
apic portal-services:list --org orgid/name --server management_server --availability-zone availability_zone
```

### 4. Get the selected portal service's name.

```
apic portal-services:get --org orgid/name --server management_server --availability-zone availability_zone PORTAL-SERVICE-NAME
```

### 5. Check the sites on your portal service. This command checks the file system, database, and API Manager on all your portal sites, which might identify platform-related problems on one or more of your portal sites.

```
apic --mode portaladmin sites:check --server management_server --portal_service_name PORTAL-SERVICE-NAME --format yaml
```

### 6. List the sites of the portal service.

```
apic --mode portaladmin sites:list --server management_server --portal_service_name PORTAL-SERVICE-NAME --format json
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the themes commands

You can use the **themes** commands to list, enable, disable, delete, and set the default themes on your Developer Portal service.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`.

For full details of the `apic login` command, see [Logging in to a management server](#).

2. List the themes from a *packagename*.

For example,

```
apic --mode portaladmin themes:list --org orgid/name --server management_server --catalog catalogid/name --package packagename1,packagename2
```

- `management_server` is the endpoint URL of the management server (required).
- `catalogid/name` is the ID or name of the catalog that the site belongs to (required).
- `orgid/name` is the ID or name of the provider organization that the catalog belongs to (required).
- `--package` enables you to filter by project packages. You can use multiple comma separated values.
- `--status` enables you to filter by extension status. Can be `enabled`, `disabled` and/or `'not installed'`. You can use multiple comma separated values.

3. Enable the *themename* theme. You can upload this theme by using the **custom-theme:create-import** command. For more information, see [Using the custom-theme commands](#).

For example,

```
apic --mode portaladmin themes:enable --org orgid/name --server management_server --catalog catalogid/name --themes themename
```

- `--themes` is the name of the theme, and can be multiple comma separated values (required).

4. Disable the *themename* theme.

For example,

```
apic --mode portaladmin themes:disable --org orgid/name --server management_server --catalog catalogid/name --themes themename,theme_lib
```

5. Delete the *themename* theme. The theme and all its dependencies must be disabled before you can delete them.

For example,

```
apic --mode portaladmin themes:delete --org orgid/name --server management_server --catalog catalogid/name --themes themename
```

6. Set the *themename* theme to be the default theme. The theme must exist and be enabled for it to be set as a default theme.

For example,

```
apic --mode portaladmin themes:set-default --org orgid/name --server management_server --catalog catalogid/name themename
```

- *themename* is the name of the theme to set as default.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Using the twig commands

You can use the **twig** commands to enable, disable, and check the state of twig debugging on a specific site on your Developer Portal service.

Note: Twig debugging should not be left enabled on production sites, as it causes performance issues, and can affect the caching on the site.

1. Log in as Provider org:

```
apic login --server management_server --realm provider/identity_provider --username provider_username --password provider_password
```

You can determine which identity provider to use in the `--realm` parameter by entering the following command to see a list of all available identity providers (you do not need to be logged in to use this command):

```
apic identity-providers:list --scope provider --server mgmt_endpoint_url --fields title,realm
```

For example:

```
apic identity-providers:list --scope provider --server myserver.com --fields title,realm
total_results: 2
results:
- title: Cloud Manager User Registry
  realm: provider/default-idp-2
- title: Corporate LDAP user registry
  realm: provider/corporate-ldap
```

The `title` value should enable you to determine which identity provider to use; you can then copy the corresponding `--realm` parameter directly from the displayed `realm` value. For any identity providers that were created by your administrator after API Connect was installed, the names will have been determined at creation time. The default API Manager Local User Registry for login as a member of a provider organization is `default-idp-2`.

For full details of the `apic login` command, see [Logging in to a management server](#).

2. Enable twig debugging for a portal site.

```
apic --mode portaladmin twig:debug-enable --server management_server --org orgid/name --catalog catalogid/name
```

- `management_server` is the endpoint URL of the management server (required).
- `orgid/name` is the ID or name of the provider organization that the catalog belongs to (required).
- `catalogid/name` is the ID or name of the catalog that the site belongs to (required).

For example:

```
apic --mode portaladmin twig:debug-enable --server my.management.server.com --org ibm --catalog portal-test
Setting twig debug to true for site my.management.server.com/ibm/portal-test.
Rebuilding cache for my.management.server.com/ibm/portal-test so twig debug changes can take affect.
```

3. Disable twig debugging for a portal site.

```
apic --mode portaladmin twig:debug-disable --server management_server --org orgid/name --catalog catalogid/name
```

For example:

```
apic --mode portaladmin twig:debug-disable --server my.management.server.com --org ibm --catalog portal-test
Setting twig debug to false for site my.management.server.com/ibm/portal-test.
Rebuilding cache for my.management.server.com/ibm/portal-test so twig debug changes can take affect.
```

4. Get the current state of twig debugging for a specific site.

```
apic --mode portaladmin twig:debug-status --server management_server --org orgid/name --catalog catalogid/name
```

For example:

```
apic --mode portaladmin twig:debug-status --server my.management.server.com --org ibm --catalog portal-test
The current state of twig debugging is true for my.management.server.com/ibm/portal-test.
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Scenarios that use the Developer Portal command-line tool

The Developer Portal provides a command-line tool, **apic**, that you can use to replicate all or part of your Developer Portal environment. Here are some scenarios of how you might use this tool to save time and effort, and reduce errors.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Exporting and importing custom themes and site configuration

You can use the Developer Portal command-line tool, **cli**, to replicate changes from one Developer Portal instance to another. You might want to use these commands to copy your themes or a configuration change, from a staging environment to a production environment.

## Before you begin

To complete this scenario, you must have a staging Developer Portal and a production Developer Portal enabled. You must have administrator access, and the permission **settings:manage**, to both to complete this scenario. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

## About this scenario

In this scenario, on your staging Developer Portal, you create a theme and make some configuration changes. Then, you use the Developer Portal **cli** to replicate the changes on your production Developer Portal.

This scenario takes you through the following steps:

1. [Create a custom theme on the staging Developer Portal.](#)
2. [Add a field to an application content type to change the \*\*site-config\*\* on the staging Developer Portal.](#)
3. [Use the \*\*cli\*\* to export the custom themes and \*\*site-config\*\* on the staging Developer Portal.](#)
4. [Use the \*\*cli\*\* to import the custom themes and \*\*site-config\*\* on the production Developer Portal.](#)

## Create a custom theme on the staging Developer Portal

1. Log in to your staging Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click **Manage** to display it.
3. Click **Appearance** > **Generate sub-theme**. The **Generate sub-theme** window is displayed.
4. Enter a Sub-theme name, and select CSS for the Sub-theme type. (If you prefer, you can select SCSS, but this extension to CSS is for advanced theme developers, and isn't covered by this scenario.)

### Generate sub-theme ☆

List Generate Update Settings

Home » Administration

The first step in customizing the branding of your Developer Portal is to create a custom sub-theme. The sub-theme inherits all of the resources of the parent theme, and you can then override specific resources in the `overrides.css` file to configure your customizations. For more information, see: [Knowledge Center](#)

Complete the form below and you will be presented with a custom sub-theme to download.

**Sub-theme name \***

A custom theme name, for example: 'mycustom\_theme' or 'banka\_theme'. The name does not need to end in '\_theme' but it is a common convention.

**Sub-theme type**

CSS

SCSS

Your sub-theme can be setup to use either CSS or SCSS. SCSS is an extension to CSS and is for more advanced theme developers.

**Template**

Default Connect Theme

Business Mono

Sapphire Blue

5. Select the Default template to base your **sub-theme** on. You can create a **sub-theme** based on a color template. However, for this scenario you use the default `connect_theme` template.
6. Click **Generate**.
7. Download the generated **sub-theme** to a location of your choice, and extract all the files from the .zip file.

On your computer, navigate to the files that you extracted. Find the `overrides.css` file in here `banka_theme/banka_theme/css/overrides.css`. You can now customize the `overrides.css` file.

1. Open the `overrides.css` file in your chosen editor.
2. Customize your **sub-theme** by entering the following elements into the `overrides.css` file:

```
/* Body of the home page */
body.path-frontpage.contexthome {
  color: #152935;
  background-color: #d1f0f7;
}

/* Header of the home page */
.navbar {
  background-color: #a0a0a0;
}

/* Footer of the home page */
footer.footer {
  background-color: #dee0e2;
}
```

```
footer.footer ul.nav > li > a {
color: #454A4C;
}
```

```
File Edit Format View Help
/* Body of the home page */
body.path-frontpage.contexthome {
  color: #152935;
  background-color: #d1f0f7;
}

/* Header of the home page */
.navbar {
  background-color: #a0a0a0;
}

/* Footer of the home page */
footer.footer {
background-color: #dee0e2;
}

footer.footer ul.nav > li > a {
color: #454A4C;
}

Ln 19, Col 2    100%    Windows (CRLF)    UTF-8
```

3. Save the overrides.css file.

You can now install and enable your customized theme.

1. After you finish updating the overrides.css file, compress all the theme files back into the .zip **sub-theme** file that you downloaded originally.
2. In the Developer Portal, click Appearance > Install new theme. The **Install new theme** window is displayed.
3. In Upload a module or theme archive to install click Browse, and navigate to your newly updated compressed theme file.
4. Click Install to install the theme onto your site.
5. Click Enable newly added themes, and find your new theme in the list of **Disabled themes**. Click Enable and set as default to set your new custom **sub-theme** as the default theme for your site.
6. Return to the Developer Portal home page by clicking Back to site. You can now see your custom theme.

## Add a field to an application content type to change the `site-config` on the staging Developer Portal

1. Log in to your staging Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Click Structure > Content types > Application > Manage fields.
4. Click + Add field.
5. In **Add a new field**, select Text (plain, long). Enter Company name as the label title.

or

**Label \***  
 Machine name: field\_company\_name [Edit]

6. Click Save and continue.
7. Leave the **Allowed number of values** set to 1 and click Save field settings.
8. Click Save field settings. You can now see your new field.

## Use the `cli` to export the custom themes and `site-config` on the staging Developer Portal

1. Log in to the management server.

```
apic login --server management_server --realm realm --username org_username --password org_password
```

For example,

```
apic login -s api.stagingexample.com --realm provider/default-idp-2 --username ibm --password Qwerty123E
```

For more information about variable options, see [Logging in to a management server](#).

2. Export your custom themes.

The `custom-theme:create-export` command creates an export task against the portal of the specified `catalog` and `org`. The command then polls the status of the task until it has `FINISHED` and the artifacts are streamed back.

Note: The command continues to poll until the maximum polling time of 15 minutes is reached. At which point you can use the commands `custom-theme:get-export-status` and `custom-theme:get-export` to get the status and potentially an artifact.

```
apic --mode portaladmin custom-theme:create-export --catalog name/id --org name/id --server management_server
```

- The theme .tgz is saved to the directory in which you ran the command.

- The saved .tgz has the format `custom_theme_createExport-20200217134637.tgz`.
- You can save your exports into your change control management system.

For example,

```
apic --mode portaladmin custom-theme:create-export --catalog dev --org ibm --server api.stagingexample.com
```

### 3. Export your site config.

The `site-config:create-export` command creates an export task against the portal of the specified `catalog` and `org`, the command then polls the status of the task until it has `FINISHED` and the artifacts are streamed back.

```
apic --mode portaladmin site-config:create-export --catalog name/id --org name/id --server management_server
```

- The site config .tgz is saved to the directory in which you ran the command.
- The saved .tgz has the format `site_config_createExport-20200217134637.tgz`.
- You can save your exports into your change control management system.

For example,

```
apic --mode portaladmin site-config:create-export --catalog dev --org ibm --server api.stagingexample.com
```

## Use the `cli` to import the custom themes and `site-config` on the production Developer Portal

### 1. Log in to the management server.

```
apic login --server management_server --realm realm --username org_username --password org_password
```

For example,

```
apic login -s api.productionexample.com --realm provider/default-idp-2 --username ibm --password Qwerty123E
```

For more information about variable options, see [Logging in to a management server](#).

### 2. Import your custom themes.

The `custom-theme:create-import` command uses the supplied .tgz file to import the custom themes into the portal of the specified `catalog` and `org`. The command then polls the status of the task until the task has either `FINISHED` successfully, or failed because of an error.

Note: The command continues to poll until the maximum polling time of 15 minutes is reached. At which point you can use the command `custom-theme:get-import-status` to get the status of the import.

```
apic --mode portaladmin custom-theme:create-import --catalog name/id --org name/id --server management_server /PATH/TO/THEME/TGZ
```

For example,

```
apic --mode portaladmin custom-theme:create-import --catalog prod --org ibm --server api.productionexample.com C:/users/example/desktop/custom_theme_createExport-20200217134637.tgz
```

### 3. Import your site config.

The `site-config:create-import` command uses the supplied .tgz file to import the site config into the portal of the specified `catalog` and `org`. The command then polls the status of the task until the task has either `FINISHED` successfully, or failed because of an error.

```
apic --mode portaladmin site-config:create-import --catalog name/id --org name/id --server management_server /PATH/TO/CONFIG/TGZ
```

For example,

```
apic --mode portaladmin site-config:create-import --catalog prod --org ibm --server api.productionexample.com C:/users/example/desktop/site_config_createExport-20200217134637.tgz
```

## What you did in this scenario

In this scenario, you created a theme and changed the configuration on your staging Developer Portal. Then, you used the Developer Portal `cli` to replicate the changes on to your production Developer Portal.

You can now see the changes that you made on your production Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Exporting and importing custom themes and site configuration by using the Portal Admin API

The platform REST APIs for IBM® API Connect provide complete access to the capability of the platform. So, you can use the Developer Portal command-line tool, `cli`, to replicate changes from one Developer Portal instance to another. However, if the Developer Portal `cli` was unavailable for some reason, you can use the Portal Admin API.

## Before you begin

To complete this scenario, you must have a staging Developer Portal and a production Developer Portal enabled. You must have administrator access, or the permission `settings:manage`, to both to complete this scenario. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

Also, you must have downloaded and installed the toolkit. For more information, see [Installing the toolkit](#).

## About this scenario

---

In this scenario, you use the toolkit to obtain some authentication. Then, on your staging Developer Portal, you create a theme and make some configuration changes. Then, you use the Portal Admin API to replicate the changes on your production Developer Portal.

This scenario takes you through the following steps:

1. [Obtaining the client ID and secret, and a bearer token.](#)
2. [Create a custom theme on the staging Developer Portal.](#)
3. [Add a field to an application content type to change the `site-config` on the staging Developer Portal.](#)
4. [Use the Portal Admin API to export the custom themes and `site-config` on the staging Developer Portal.](#)
5. [Use the Portal Admin API to import the custom themes and `site-config` on the production Developer Portal.](#)

## Obtaining the client ID and secret, and a bearer token.

---

From your toolkit:

1. Obtaining the client ID and secret.

- a. Obtain the list of administrator scoped providers to determine the correct realm to use:

```
apic identity-providers:list --scope admin --server <management_server>
```

For example,

```
apic identity-providers:list --scope admin --server api.stagingexample.com
```

Here is an example of some possible output:

```
default-idp-1
```

- b. Run `apic login`, complete the details:

```
apic login --server management_server --realm cloud_realm --username admin_username --password admin_password
```

For example,

```
apic login -s api.stagingexample.com --realm provider/default-idp-1 --username admin --password Qwerty123f
```

- c. Log in to cloud manager, and register an app. Make a new file locally and call it `app1.json`. Then, copy into it the following code snippet:

```
{
  "name": "app1",
  "client_id": "applid",
  "client_secret": "applsecret",
  "client_type": "toolkit"
}
```

- d. Run the registration create command:

```
apic registrations:create --server management_server app1.json
```

For example,

```
apic registrations:create --server api.stagingexample.com app1.json
```

Here is an example of some possible output:

```
app1 [state: enabled] https://api.stagingexample.com/api/cloud/registrations/d2b7572f-3406-42a7-bdcc-85f177860df7
```

2. Now, you can get a bearer token from the provider org.

- a. To obtain a list of provider realms:

```
apic identity-providers:list --scope provider --server management_server
```

For example,

```
apic identity-providers:list --scope provider --server api.stagingexample.com
```

Here is an example of some possible output:

```
default-idp-2
```

- b. Run `apic login`, complete the details:

```
apic login --server management_server --realm provider_realm --username org_username --password org_password
```

For example,

```
apic login -s api.stagingexample.com --realm provider/default-idp-2 --username ibm --password Qwerty123f
```

- c. Create an HTTP request to obtain an access token:

```
curl -k -X POST -d '{"username": "org_username", "password": "org_password", "realm": "provider/default-idp-2", "client_id": "app_id", "client_secret": "app_secret", "grant_type": "password"}' -H 'Content-Type: application/json' -H 'Accept: application/json' https://management_server/api/token
```

7. Download the generated **sub-theme** to a location of your choice, and extract all the files from the .zip file.

On your computer, navigate to the files that you extracted. Find the overrides.css file in here `banka_theme/banka_theme/css/overrides.css`. You can now customize the overrides.css file.

1. Open the overrides.css file in your chosen editor.
2. Customize your **sub-theme** by entering the following elements into the overrides.css file:

```
/* Body of the home page */
body.path-frontpage.contexthome {
  color: #152935;
  background-color: #d1f0f7;
}

/* Header of the home page */
.navbar {
  background-color: #a0a0a0;
}

/* Footer of the home page */
footer.footer {
  background-color: #dee0e2;
}

footer.footer ul.nav > li > a {
  color: #454A4C;
}
```

3. Save the overrides.css file.

You can now install and enable your customized theme.

1. After you finish updating the overrides.css file, compress all the theme files back into the .zip **sub-theme** file that you downloaded originally.
2. In the Developer Portal, click Appearance > Install new theme. The **Install new theme** window is displayed.
3. In Upload a module or theme archive to install click Browse, and navigate to your newly updated compressed theme file.
4. Click Install to install the theme onto your site.
5. Click Enable newly added themes, and find your new theme in the list of **Disabled themes**. Click Enable and set as default to set your new custom **sub-theme** as the default theme for your site.
6. Return to the Developer Portal home page by clicking Back to site. You can now see your custom theme.

## Add a field to an application content type to change the `site-config` on the staging Developer Portal

1. Log in to your staging Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Click Structure > Content types > Application > Manage fields.
4. Click + Add field.
5. In **Add a new field**, select Text (plain, long). Enter Company name as the label title.

**Add a new field** **Re-use an existing field**

Text (plain, long) or - Select an existing field -

**Label \***

Machine name: field\_company\_name [\[Edit\]](#)

[Save and continue](#)

6. Click Save and continue.
7. Leave the **Allowed number of values** set to 1 and click Save field settings.
8. Click Save field settings. You can now see your new field.

Company name field\_company\_name Text (plain, long) [Edit](#)

## Use the Portal Admin API to export the custom themes and `site-config` on the staging Developer Portal

1. Export your custom themes.
  - a. Create the export job by using this command:

```
curl -k -X 'POST' -H "Authorization: bearer $TOKEN" -H 'Accept: application/yaml' 'https://<management_server>/portal/catalogs/<org>/<catalog>/custom-theme/export'
```

For example,

```
curl -k -X 'POST' -H "Authorization: bearer $TOKEN" -H 'Accept: application/yaml' 'https://api.stagingexample.com/portal/catalogs/ibm/staging/custom-theme/export'
```

Here is an example of some possible output:

```
status: 201
message:
  stdout: >-
    /catalogs/75cfdc05-e818-408e-8ce6-fd3fd61c8756/f09602a2-a0e4-40dc-a82d-d1af326ad092/custom-
```

```
theme/export/85z2m39znojolv2s/status
stderr: ''
errors: []
```

- b. You can check the status of the export job by invoking the `/status` endpoint.

```
curl -k -X 'GET' -H "Authorization: bearer $TOKEN" -H 'Accept: application/yaml'
'https://<management_server>/portal/catalogs/<org>/<catalog>/custom-theme/export/<task_id>/status'
```

For example,

```
curl -k -X 'GET' -H "Authorization: bearer $TOKEN" -H 'Accept: application/yaml'
'https://api.stagingexample.com/portal/catalogs/ibm/staging/custom-theme/export/85z2m39znojolv2s/status'
```

Here is an example of some possible output:

```
{
  "status": 200,
  "message": {
    "stdout": "The status of this task is: FINISHED and the artifact can now be streamed"
  },
  "errors": []
}
```

- c. You can now download the custom theme file onto your machine.

```
curl -k -X 'GET' -H "Authorization: bearer $TOKEN" -H 'Accept: application/octet-stream'
'https://<management_server>/portal/catalogs/<org>/<catalog>/custom-theme/export/<task_id>' -o <theme_name>
```

For example,

```
curl -k -X 'GET' -H "Authorization: bearer $TOKEN" -H 'Accept: application/octet-stream'
'https://api.stagingexample.com/portal/catalogs/ibm/staging/custom-theme/export/85z2m39znojolv2s' -o mytheme.tgz
```

Note: When you use the `curl` commands to download files, if you do not specify an output with `-o`, it incorrectly prints the output as binary onto the terminal screen.

- d. On Mac and Linux® machines, you can verify that you have a valid theme export `.tgz` file by invoking the `tar t --list` argument.

```
tar -tvf <theme_name>
```

For example,

```
tar -tvf mytheme.tgz
```

Here is an example of some possible output:

```
drwxrwsr-x 0 aegir aegir 0 9 Jun 13:40 ./
drwxr-sr-x 0 aegir aegir 0 9 Jun 13:40 emerald_theme_css/
-rw-r--r-- 0 aegir aegir 7 9 Jun 13:40 emerald_theme_css/emerald_theme_css.theme
-rw-r--r-- 0 aegir aegir 29224 9 Jun 13:40 emerald_theme_css/screenshot.png
-rw-r--r-- 0 aegir aegir 442 9 Jun 13:40 emerald_theme_css/composer.json
-rw-r--r-- 0 aegir aegir 599 9 Jun 13:40 emerald_theme_css/emerald_theme_css.info.yml
-rw-r--r-- 0 aegir aegir 1150 9 Jun 13:40 emerald_theme_css/favicon.ico
-rw-r--r-- 0 aegir aegir 5932 9 Jun 13:40 emerald_theme_css/logo.svg
-rw-r--r-- 0 aegir aegir 61 9 Jun 13:40 emerald_theme_css/emerald_theme_css.libraries.yml
drwxr-sr-x 0 aegir aegir 0 9 Jun 13:40 emerald_theme_css/css/
-rw-r--r-- 0 aegir aegir 47249 9 Jun 13:40 emerald_theme_css/css/overrides.css
```

## 2. Export your site config.

- a. Create the export job by using this command:

```
curl -k -X 'POST' -H "Authorization: bearer $TOKEN" -H 'Accept: application/json'
'https://<management_server>/portal/catalogs/<org>/<catalog>/config/export'
```

For example,

```
curl -k -X 'POST' -H "Authorization: bearer $TOKEN" -H 'Accept: application/json'
'https://api.stagingexample.com/portal/catalogs/ibm/staging/config/export'
```

Here is an example of some possible output:

```
{
  "status": 201,
  "message": {
    "stdout": "/catalogs/75cfdc05-e818-408e-8ce6-fd3fd61c8756/f09602a2-a0e4-40dc-a82d-
dlaf326ad092/config/export/5cylgk55ciiwn190/status",
    "stderr": ""
  },
  "errors": []
}
```

- b. You can check the status of the export job by invoking the `/status` endpoint.

```
curl -k -X 'GET' -H "Authorization: bearer $TOKEN" -H 'Accept: application/json'
'https://<management_server>/portal/catalogs/<org>/<catalog>/config/export/<task_id>/status'
```

For example,

```
curl -k -X 'GET' -H "Authorization: bearer $TOKEN" -H 'Accept: application/json'
'https://api.stagingexample.com/portal/catalogs/ibm/staging/config/export/5cylgk55ciiwn190/status'
```

Here is an example of some possible output:

```
{
  "status": 200,
  "message": {
    "stdout": "The status of this task is: FINISHED and the artifact can now be streamed"
  },
  "errors": []
}
```

- c. You can now download the site-config file onto your machine.

```
curl -k -X 'GET' -H "Authorization: bearer $TOKEN" -H 'Accept: application/octet-stream'
'https://<management_server>/portal/catalogs/<org>/<catalog>/config/export/<task_id>' -o <config_name>
```

For example,

```
curl -k -X 'GET' -H "Authorization: bearer $TOKEN" -H 'Accept: application/octet-stream'
'https://api.stagingexample.com/portal/catalogs/ibm/staging/config/export/5cylgk55ciiwn190' -o myconfig.tgz
```

Note: When you use the `curl` commands to download files, if you do not specify an output with `-o`, it incorrectly prints the output as binary onto the terminal screen.

- d. On Mac and Linux machines, you can verify that you have a valid theme export `.tgz` file by invoking the `tar t --list` argument. The `head -n 10` option returns the first 10 lines of the result.

```
tar -tvf <config_name> | head -n 10
```

For example,

```
tar -tvf myconfig.tgz | head -n 10
```

Here is an example of some possible output, which should be a list of yaml files:

```
-rw-rw-r-- 0 aegir aegir 393 11 Jun 15:54 block.block.bartik_page_title.yml
-rw-rw-r-- 0 aegir aegir 577 11 Jun 15:54 filter.format.plain_text.yml
-rw-rw-r-- 0 aegir aegir 256 11 Jun 15:54 captcha.captcha_point.consumerorg_invite_user_form.yml
-rw-rw-r-- 0 aegir aegir 741 11 Jun 15:54 block.block.emerald_theme_css_account_menu.yml
-rw-rw-r-- 0 aegir aegir 488 11 Jun 15:54 field.field.node.application.apic_hostname.yml
-rw-rw-r-- 0 aegir aegir 460 11 Jun 15:54 field.storage.node.apic_catalog_id.yml
-rw-rw-r-- 0 aegir aegir 545 11 Jun 15:54 field.field.user.user.apic_user_registry_url.yml
-rw-rw-r-- 0 aegir aegir 427 11 Jun 15:54 language.content_settings.shortcut.default.yml
-rw-rw-r-- 0 aegir aegir 460 11 Jun 15:54 field.storage.node.api_soapversion.yml
-rw-rw-r-- 0 aegir aegir 148 11 Jun 15:54 captcha.captcha_point.node_product_form.yml
```

## Use the Portal Admin API to import the custom themes and `site-config` on the production Developer Portal

Note: If you are importing your custom theme onto a new server, then before you continue, follow step 1 of this tutorial to obtain a new token to authenticate with your second server. If you are using the same server, and are importing the theme into a new catalog, then the current TOKEN remains valid for the rest of the steps.

Note: You must import the custom theme before you import the site config. This order is because the site config contains information about the default theme, and so your custom theme must exist on the portal when the site config is imported so that it can be set upon import.

1. Import your custom themes.

- a. On the production catalog, import the custom theme onto the production catalog `prod` by using this command:

```
curl -k -X 'POST' -H "Authorization: bearer $TOKEN" -H 'Accept: application/yaml' -H 'Content-Type:
application/octet-stream' 'https://<management_server>/portal/catalogs/<org>/<catalog>/custom-theme/import' --data-
binary @<path_to_theme_file>
```

For example,

```
curl -k -X 'POST' -H "Authorization: bearer $TOKEN" -H 'Accept: application/yaml' -H 'Content-Type:
application/octet-stream' 'https://api.productionexample.com/portal/catalogs/ibm/prod/custom-theme/import' --data-
binary @/Users/steve/PortaladminCLI/mytheme.tgz
```

Here is an example of some possible output:

```
status: 201
message:
  stdout: >-
/catalogs/75cfdc05-e818-408e-8ce6-fd3fd61c8756/56f3d4ca-8be2-48f7-8f91-3d654c2b91f2/custom-
theme/import/vtscpuj08i0hfo6/status
  stderr: ''
errors: []
```

- b. You can check the status of the import job by invoking the `/status` endpoint on this command:

```
curl -k -X 'GET' -H "Authorization: bearer $TOKEN" -H 'Accept: application/yaml'
'https://<management_server>/portal/catalogs/<org>/<catalog>/custom-theme/import/<task_id>/status'
```

For example,

```
curl -k -X 'GET' -H "Authorization: bearer $TOKEN" -H 'Accept: application/yaml'
'https://api.productionexample.com/portal/catalogs/ibm/prod/custom-theme/import/vtscpuj08i0hfo6/status'
```

Here is an example of some possible output:

```
{
  "status": 200,
  "message": {
    "stdout": "2020-06-09 13:00:59: CLI task (custom_theme:import) starting.\n2020-06-09 13:00:59: Importing custom
theme emerald_theme_css\n2020-06-09 13:01:18: CLI task (custom_theme:import) completed successfully.",
    "stderr": ""
  },
}
```

```
"errors": []
}
```

2. Import your site config.

- a. Import the existing site-config onto the production catalog `prod` by using this command:

```
curl -k -X 'POST' -H "Authorization: bearer $TOKEN" -H 'Accept: application/json' -H 'Content-Type: application/octet-stream' 'https://<management_server>/portal/catalogs/<org>/<catalog>/config/import' --data-binary @<path_to_config_import>
```

For example,

```
curl -k -X 'POST' -H "Authorization: bearer $TOKEN" -H 'Accept: application/json' -H 'Content-Type: application/octet-stream' 'https://api.productionexample.com/portal/catalogs/ibm/prod/config/import' --data-binary @/Users/steve/PortaladminCLI/myconfig.tgz
```

Here is an example of some possible output:

```
{
  "status": 201,
  "message": {
    "stdout": "/catalogs/75cfdc05-e818-408e-8ce6-fd3fd61c8756/56f3d4ca-8be2-48f7-8f91-3d654c2b91f2/config/import/kzyozx4v5sfa81a5/status",
    "stderr": ""
  },
  "errors": []
}
```

- b. You can check the status of the config import job by invoking the `/status` endpoint:

```
curl -k -X 'GET' -H "Authorization: bearer $TOKEN" -H 'Accept: application/json' 'https://<management_server>/portal/catalogs/<org>/<catalog>/config/import/<task_id>/status'
```

For example,

```
curl -k -X 'GET' -H "Authorization: bearer $TOKEN" -H 'Accept: application/json' 'https://api.productionexample.com/portal/catalogs/ibm/prod/config/import/kzyozx4v5sfa81a5/status'
```

Here is an example of some possible output:

```
{
  "status": 200,
  "message": {
    "stdout": "2020-06-11 15:42:55: CLI task (site_config:import) starting.\n2020-06-11 15:43:29: CLI task (site_config:import) completed successfully.",
    "stderr": ""
  },
  "errors": []
}
```

## What you did in this scenario

In this scenario, you created a theme and changed the configuration on your staging Developer Portal. Then, you used the Portal Admin API to replicate the changes on to your production Developer Portal.

You can now see the changes that you made on your production Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Troubleshooting guide for the Developer Portal

Use this guide to help you diagnose and resolve Developer Portal issues in IBM® API Connect. For example, why is the Developer Portal not connecting to the Management server, why is my site not created, and why can't I log in?

### About

The following sections provide advice about how to diagnose and resolve some common problems. This information can help you to identify whether a specific IBM API Connect Version 10 component is failing, whether it's an environmental problem, and whether you should raise a support request. Some advice includes reviewing specific log files so you can narrow down the source of the problem.

Note: In the  Help page of the Cloud Manager, API Manager, and API Designer user interfaces, there's a Product information tile that you can click to find out information about your product versions, as well as Git information about the package versions being used. Note that the API Designer product information is based on its associated management server, but the Git information is based on where it was downloaded from.

- [Why is the Developer Portal not connecting to the Management server?](#)
- [Why is my Developer Portal site not being created?](#)
- [Why can't I register a user?](#)
- [Why can't I login?](#)
- [Why are changes to Products not appearing in the Developer Portal?](#)
- [Why am I having problems with my Developer Portal user interface?](#)
- [Why am I have problems with my Kubernetes system?](#)

8. [Why am I having problems with my Developer Portal backup?](#)
9. [Why am I having problems installing Drupal 8 based custom modules or sub-themes into the Drupal 9 based Developer Portal?](#)

## Why is the Developer Portal not connecting to the Management server?

---

Problems with connecting to the Management server can be due to connectivity or TLS issues. You should check the following areas:

- Can the Management server actually reach the Developer Portal?
- Is SSL pass-through enabled or required on any load balancer that sits between the Management server and the Developer Portal? For more information, see [Setting the security mode of the Portal Director](#).

If you need to open a Service Request, include the following information:

- The [IBM API Connect MustGather Information](#).
- Details of the date and time that the connection attempts were made.

## Why is my Developer Portal site not being created?

---

If you are having problems creating a site, you should take the following actions to help diagnose the issue:

1. Tail the nginx container log to confirm that the site create request reached the portal, for example:

```
kubectl logs rb93d4fb118-apic-portal-nginx-7c7b464fb6-vvx5m
```

2. Look in the container log for a site create request, for example:

```
POST /portal-service-configuration-create HTTP/1.1" 200
```

- a. If you don't find a site create request in the log, then the create request is not reaching the Developer Portal from the Management. Follow the instructions in [Why is the Developer Portal not connecting to the Management server?](#) to diagnose the connectivity issues.
- b. If a site create request is in the log, then further diagnostics can be found in the admin pod log, for example:

```
kubectl logs -f rb93d4fb118-apic-portal-www-p4bhj -c admin
```

Look in the admin pod log for messages that refer to `create_site`, as well as the name of the site.

## Why can't I register a user?

---

If you are having problems registering a user, take the following actions to help diagnose the issue:

- The user registration links in the emails are only valid for 24 hours, so check that the system time is correctly configured across all of the pods.
- If emails aren't being received, check that the email server is correctly configured; see [Configuring an email server for notifications](#). Also, if possible, check whether other emails such as publish approval alerts or password reset emails are being received.

If you need to open a Service Request, please take the following steps:

1. Note which user registry type is being used, such as Local User Registry (LUR), or LDAP user registry.
2. Enable the debug REST server and method trace in the Developer Portal UI. Click Configuration > Development > IBM Development on the administrator dashboard. Then select the Enable method entry / exit trace and Enable API Manager REST interface debug check boxes. Click Save configuration.
3. Re-create the issue, making a note of the time, the username, and any messages displayed on the screen.
4. Gather the web container log for the www pod, for example:

```
kubectl logs portal-apic-portal-www-zhqxf web > web.log
```

5. Gather all of the Management server logs and the logs for the user registry type that is being used; see [IBM API Connect MustGather Information](#) for details.

## Why can't I login?

---

If users are having problems with logging in to the Developer Portal, please take the following steps before opening a Service Request:

1. Note which user registry type is being used, such as Local User Registry (LUR), or LDAP user registry.
2. Enable the debug REST server and method trace in the Developer Portal UI. Click Configuration > Development > IBM Development on the administrator dashboard. Then select the Enable method entry / exit trace and Enable API Manager REST interface debug check boxes. Click Save configuration.
3. Recreate the issue, making a note of the time, the username, and any messages printed to the screen.
4. Gather the web container log for the www pod, for example:

```
kubectl logs portal-apic-portal-www-zhqxf web > web.log
```

5. Gather all of the Management server logs and the logs for the user registry type that is being used; see [IBM API Connect MustGather Information](#) for details.

## Why are changes to Products not appearing in the Developer Portal?

---

To determine whether the problem is with the Portal server (either the nginx or the www pod), the Management server, or the network, please make the following diagnostic checks.

Portal nginx pod

1. Tail the nginx pod log on the Portal, for example:

```
kubectl logs -f portal-apic-portal-nginx-866c977c4c-n9gbf
```

2. Make a publish request to the Catalog (note that the request must be a Publish or Retire operation, not a Stage operation).
3. In the log being tailed, see if the following message appears:

```
...POST /event-create...
```

If the POST message appears in the nginx log, then the publish webhook that was sent from the Management server did arrive at the Portal. If there is an error message in place of a POST message, then the problem is likely to be with the nginx pod. If there is no message at all, then it's likely that the webhook from the Management server is not reaching the Portal and there is a network problem.

Portal www pod

1. Tail the www pod admin container log on the Portal, for example:

```
kubectl logs -f portal-apic-portal-www-dtbzw -c admin
```

2. Make a publish request to the Catalog (note that the request must be a Publish or Retire operation, not a Stage operation).
3. In the log being tailed, see if the following message appears:

```
Received webhook event 'product_lifecycle' for catalog
```

If no such message appears, it suggests that the webhook is either not arriving at the Portal, or not getting beyond the nginx pod (see the previous section [Portal nginx pod](#)). Any errors that the admin container has in processing the webhook will be logged in the www pod admin container log.

Management server apim pod

1. Tail the apim pod log on the Management server, for example:

```
kubectl logs -f apiconnect-apim-v2-86b464c4f5-4cx6x
```

2. Make a publish request to the Catalog (note that the request must be a Publish or Retire operation, not a Stage operation).
3. In the log being tailed, see if there any error messages.

Search for the word 'sending', you should see the message `webhook: sending successful` if the webhook is sent, or error messages indicating why if the webhook is not sent.

## Why am I having problems with my Developer Portal user interface?

If you are having user interface (UI) problems, make the following checks:

- Try clearing the cache from your browser, try using private browsing, and try using different browsers - see whether there are any differences in behavior.
- Check your browser window size and screen resolution, and try increasing and decreasing the settings.
- Investigate the browser developer tools console and network tabs, as they might provide some diagnostic clues.
- Try clearing the Drupal caches from within the Developer Portal; see [Clearing the server caches](#) for details.

If you need to open a Service Request, along with the [IBM API Connect MustGather Information](#) logs, also include details of the time and date when the problem was reproduced. In addition, an export of the browser developer tools console and network output would be helpful.

## Why am I have problems with my Kubernetes system?

Kubernetes provides a DNS server as one of the pods in the kube-system namespace (unless you have configured your Kubernetes setup differently), and sometimes this DNS server can silently fail. When the Portal www or db pods restart, they check that their own hostname and IP address is in the service that is defined for the pod. If the DNS server is down, this check fails. An indication that the DNS server is down is seeing the following log lines printed endlessly in the admin or db containers:

```
[ admin stdout] 2cd141dc:2cd141dc:2cd141dc 2018-10-08 07:27:54: service-ready:
[ admin stdout] 2cd141dc:2cd141dc:2cd141dc 2018-10-08 07:27:54: service-all:
[ admin stdout] 2cd141dc:2cd141dc:2cd141dc 2018-10-08 07:27:54: Waiting for sleep in service all check. Pid(s) 352 Seconds
24
[ admin stdout] 2cd141dc:2cd141dc:2cd141dc 2018-10-08 07:27:59: Finished waiting for sleep in service all check. Pid(s)
352 Seconds 29
[ admin stdout] 2cd141dc:2cd141dc:2cd141dc 2018-10-08 07:28:01: WARNING 5: r4c09b98d02-apic-portal-admin-all doesn't
include this pod or r4c09b98d02-apic-portal-director does. Checking again in 5 seconds.
```

To fix this problem, delete the DNS pod in the kube-system namespace to force it to restart, for example:

```
kubectl -n kube-system delete pod kube-dns-b76db4f7f-n41vt
```

Where `kube-dns-b76db4f7f-n41vt` is the full name of the DNS pod.

Note: To find out the full name of the DNS pod in your Kubernetes system, run the following command:

```
kubectl -n kube-system get pods
```

This command will return data like the following example:

```
$ kubectl -n kube-system get pods
NAME READY STATUS RESTARTS AGE
default-http-backend-5bccfbd8-mjnnb 1/1 Running 0 4d
etcd-minikube 1/1 Running 0 4d
kube-addon-manager-minikube 1/1 Running 0 4d
kube-apiserver-minikube 1/1 Running 0 4d
kube-controller-manager-minikube 1/1 Running 0 4d
kube-dns-6f4fd4bdf-7zslq 3/3 Running 0 4d
kube-proxy-mddmj 1/1 Running 0 4d
kube-registry-proxy-99qml 1/1 Running 0 4d
kube-registry-v0-zt8pv 1/1 Running 0 4d
kube-scheduler-minikube 1/1 Running 0 4d
kubernetes-dashboard-77d8b98585-dczcs 1/1 Running 0 4d
nginx-ingress-controller-57bcfc76d6-z775d 1/1 Running 0 4d
storage-provisioner 1/1 Running 0 4d
tiller-deploy-587df449fb-bpwhq 1/1 Running 0 4d
```

## Why am I having problems with my Developer Portal backup?

If you attempt to back up your portal system or site:

```
apicup subsys exec <portal_subsystem> backup-system|backup-site|backup-all
```

You might encounter the following message:

```
curl: (6) Could not resolve host: apic-portal-apic-portal-director
```

This error is the result of a failure of the SFTP backup file transfer to the backup system, caused by missing authentication with the portal node. To correct this error, `ssh` from the backup system to the portal node, and accept the authentication key when prompted:

1. Enter the portal-www admin container, for example:

```
kubectl exec -it WWW_POD_NAME -c admin bash
```

2. `ssh` to your backup server and accept any authentication prompts, for example:

```
ssh BACKUP_SERVER_HOSTNAME
```

When you have successfully authenticated with your backup server, you can close the session. This action needs to be done only once. Portal backups can then run without any issues.

## Why am I having problems installing Drupal 8 based custom modules or sub-themes into the Drupal 9 based Developer Portal?

From IBM API Connect 10.0.3.0, the Developer Portal is based on the Drupal 9 content management system. If you want to install Drupal 8 custom modules or sub-themes into the Drupal 9 based Developer Portal, you must ensure that they are compatible with Drupal 9, including any custom code that they contain, and not using any deprecated APIs, for example. There are tools available for checking your custom code, such as [drupal\\_check](#) on GitHub, which checks Drupal code for deprecations.

For example, any Developer Portal sites that contain modules or sub-themes that don't contain a Drupal 9 version declaration will fail to upgrade, and errors like the following output will be seen in the `admin` logs:

```
[ queue stdout] 14834 729319:355ec8:a7d29c 2021-09-04 20:34:49: check_d9_compat: Checking theme: emeraldgreen
[ queue stdout] 14834 729319:355ec8:a7d29c 2021-09-04 20:34:49: check_d9_compat: ERROR: Incompatible
core_version_requirement '' found for emeraldgreen
[ queue stdout] 14834 729319:355ec8:a7d29c 2021-09-04 20:34:49: check_d9_compat: Checking theme: rubyred
[ queue stdout] 14834 729319:355ec8:a7d29c 2021-09-04 20:34:49: check_d9_compat: ERROR: Incompatible
core_version_requirement '8.x' found for rubyred
[ queue stdout] 14834 729319:355ec8:a7d29c 2021-09-04 20:34:49: check_d9_compat: ERROR: Found themes incompatible with
Drupal 9: emeraldgreen rubyred
[ queue stdout] 14834 729319:355ec8:a7d29c 2021-09-04 20:34:49: check_d9_compat: ERROR: /tmp/restore_site.355ec8 is NOT
Drupal 9 compatible
...
[ queue stdout] 14834 729319:355ec8:a7d29c 2021-09-04 20:44:49: check_d9_compat: Checking module: custom_mod_1
[ queue stdout] 14834 729319:355ec8:a7d29c 2021-09-04 20:44:49: check_d9_compat: ERROR: Incompatible
core_version_requirement '' found for custom_mod_1
[ queue stdout] 14834 729319:355ec8:a7d29c 2021-09-04 20:44:49: check_d9_compat: Checking module: custom_mod_2
[ queue stdout] 14834 729319:355ec8:a7d29c 2021-09-04 20:44:49: check_d9_compat: ERROR: Incompatible
core_version_requirement '8.x' found for custom_mod_2
[ queue stdout] 14834 729319:355ec8:a7d29c 2021-09-04 20:44:49: check_d9_compat: ERROR: Found modules incompatible with
Drupal 9: emeraldgreen rubyred
[ queue stdout] 14834 729319:355ec8:a7d29c 2021-09-04 20:44:49: check_d9_compat: ERROR: sitel.com is NOT Drupal 9
compatible
```

To fix version compatibility errors, all custom modules and sub-themes should declare a `core_version_requirement` key in their `*.info.yml` file that indicates Drupal 9 compatibility. For example:

```
name: Example module
type: module
description: Purely an example
core: 8.x
core_version_requirement: '^8 || ^9'
package: Example module
```

```
# Information added by Drupal.org packaging script on 2020-05-31
version: '8.x-1.3'
project: 'example_module'
datestamp: 1590905415
```

This example specifies that the module is compatible with all versions of Drupal 8 and 9. For more information, see [Let Drupal know about your module with an .info.yml file](#) on the drupal.org website.

If you have a backup of a site that you need to restore and are getting the version compatibility error, but the module or theme `*.info.yml` file cannot be changed easily, then you can modify the site backup.

To modify the site backup, extract the it, edit the relevant files inside it, and then tar the backup file again. Note that this procedure will overwrite the original backup file, so ensure that you keep a separate copy of the original file before you start the extraction. For example:

1. `mkdir /tmp/backup`
2. `cd /tmp/backup`
3. `tar xzf path_to_backup.tar.gz`
4. Edit the custom module and theme files to make them Drupal 9 compatible, and add the correct `core_version_requirement` setting.
5. `rm -f path_to_backup.tar.gz`
6. `tar cfz path_to_backup.tar.gz`
7. `cd /`
8. `rm -rf /tmp/backup`

---

## Setting the security mode of the Portal Director

You can set the security mode of the Portal Director for a Developer Portal service in your API Connect on-premise cloud.

### About this task

---

By default, the Portal Director rest server is started in **secure** mode, meaning that requests to it are carried out using mutual TLS (mTLS). In order for this process to work, any load balancer on the Portal Director must allow SSL pass-through so that client certificates that are sent on incoming requests reach the Director and can be checked. In certain scenarios, it might not be possible for a load balancer to provide SSL pass-through. In that case, the Portal Director must be set to **Insecure** mode so that client certificates on incoming requests are not checked.

**Warning:** It is not recommended to run Portal Directors in production Developer Portal services in **Insecure** mode. To configure the security mode of the Portal Director belonging to a Developer Portal service in your cloud, complete these steps:

### Procedure

---

1. Get a list of the pods that are running on the virtual machine where the Developer Portal service is deployed.

```
kubectl get pods -n <namespace>
```

2. Identify the `portal-www` pod from the resulting list then set the Portal Director's security mode to **Insecure** with the following command:

```
kubectl exec <portal-www-pod> -c admin -- /opt/ibm/services/node_modules/portal/client/client
director_security_mode --secure false
```

### Results

---

The Portal Director is now set to **Insecure** mode. Any new incoming requests are not checked for a valid client certificate.

### What to do next

---

To set the Portal Director back to **Secure** mode, use the following command:

```
kubectl exec <portal-www-pod> -c admin -- /opt/ibm/services/node_modules/portal/client/client
director_security_mode --secure true
```

For more information on security settings, including cookies, see [How to enable penetration testing, and information about Developer Portal cookies](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Migrating your Developer Portal from Version 5 to Version 10

Guidance on how to migrate a Developer Portal site from IBM® API Connect Version 5, to IBM API Connect Version 10.

In IBM API Connect Version 10 the Developer Portal is based on the open source Drupal 9 content management software, which enables more advanced, flexible, and powerful customization capabilities. However, in IBM API Connect Version 5 the Developer Portal is based on Drupal 7. The migration tooling in Version 10 will create a new Developer Portal site, and migrate all of the associated APIs and Products, user information, and subscriptions over. However, customizations such as modules and themes cannot be automatically migrated, as the Drupal 9 baseline is very different to Drupal 7. For more information about upgrading from a Drupal 7 baseline to a Drupal 9 baseline, see [Upgrading Drupal](#) in the Drupal documentation.

The following sections take you through the migration process for the Developer Portal, and provide guidance on how to manually migrate any specific customizations to Drupal 9.

- [Migration process for the Developer Portal](#)
- [Portal Delegated User Registries](#)
- [Custom themes](#)
- [Custom modules](#)
- [Custom Rules](#)
- [Custom content types and fields](#)
- [Advanced theme development](#)
- [Changing the page layout](#)
- [Changing the front page](#)
- [Features no longer available in the Developer Portal](#)

Note: The ability to migrate is available only from IBM API Connect Version 5.0.8.7 onwards. If your deployment is at an earlier version, you must upgrade before migrating. See [Upgrading your API Connect cloud](#) for information about upgrading in Version 5. For more information about the supported versions for migration, see

[Migrating a Version 5 deployment.](#)

Note: In Version 5, it was possible, though not recommended, to modify files on the Developer Portal server directly. For more information, see [Developer Portal best practices for administrators](#). However, in Version 10, you should not make any system changes. Do not use the **kubectl exec** command to make changes inside the Developer Portal containers, and on OVA deployments do not make any modifications on the Developer Portal VM. Make any customizations on your Developer Portal by using the UI or CLI. Do not run a **kubectl exec** command on any Developer Portal containers unless asked to by IBM.

## Migration process for the Developer Portal

---

The migration process for the Developer Portal migrates all of the following information to Version 10 for each site in your cluster:

- User information (if Portal Delegated User Registry is enabled, the process is slightly different; see [Portal Delegated User Registries](#)).
- Products and APIs.
- Consumer organizations.
- Applications.
- Subscriptions.

For information about the main migration process, see [Migrating a Version 5 deployment](#).

## Portal Delegated User Registries

---

In IBM API Connect Version 5, if Portal Delegated User Registry (PDUR) was selected for a Catalog, the user management was delegated from the management server to the Developer Portal. The site administrator within the Portal then performed the configuration of user registries, and the management server recorded that the delegation had taken place, and stored a record of the users that existed in the Catalog. However, the management service maintained no information about the configuration of the specific registries or how users mapped to them. In IBM API Connect Version 10, all user registry configuration takes place in the management server, and PDUR is no longer needed. Therefore, to migrate the PDUR user registries and users from v5 to v10, configuration information must be gathered from both the management server and the Portal node.

If your IBM API Connect Version 5 Developer Portal uses Portal Delegated User Registry (PDUR), you must first export the user information that is stored in the Version 5 Developer Portal local database. This user information can then be fed into the migration tooling so that the correct user registries can be created in Version 10.

For more information about how to export the PDUR information from v5, see [Exporting Portal Delegated User Registry user information](#). For more information about the migration process in v10, see [Migration steps with PDUR](#).

## Custom themes

---

If your Version 5 Developer Portal is using a custom theme, you'll need to create the custom theme again for the Drupal 9 baseline. Start by creating a sub-theme of the new Version 10 Developer Portal site by using the theme generator, and then manually customize the sub-theme to your specifications for Drupal 9 by using Cascading Style Sheets (CSS), or Sass CSS (SCSS). Note that using SCSS in your theme makes it far simpler to change colors. We've also added a color template theme generator, which means you can quickly generate a base color theme on which to build your customized site branding. For more information, see [Creating a sub-theme](#).

Note, directly editing the API Connect theme is not permitted or supported, as edited versions of these files are overwritten when a fix pack or iFix is installed.

Other useful resources:

- [Tutorial: Creating a custom theme for the Developer Portal](#) - takes you through how to use the theme generator, customize a theme, and install a custom theme.
- [Changing the site logo](#) - how to change your site logo.
- [Changing the shortcut icon](#) - how to change the shortcut icon (favicon).
- [Creating sub-themes](#) - Drupal documentation about creating a sub-themes.
- [Theming differences between Drupal 6, 7 & 8](#) - Drupal documentation about theming differences.

## Custom modules

---

If your Version 5 Developer Portal is using any custom modules, you will need to create these custom modules again for the Drupal 9 baseline. For more information on writing custom modules, see [Extend](#).

Other useful resources:

- [Creating custom modules](#) - Drupal documentation about creating custom modules.
- [Getting started creating custom modules](#) - Drupal documentation giving background information and prerequisites needed for custom module development.
- [Understanding hooks](#) - Drupal documentations about hooks.
- [Drupal API hooks](#) - Drupal documentation about the hooks that are available.

## Custom Rules

---

If your Version 5 Developer Portal is using any custom Rules, you will need to create them as custom modules for the Drupal 9 baseline. You cannot export the Drupal 7 Rules, and then import them into the Drupal 9 baseline, as the events and actions are implemented in a different way. For more information about custom modules, see the [Custom modules](#) section.

## Custom content types and fields

---

If your Version 5 Developer Portal is using any custom content, you will need to create this content again for the Drupal 9 baseline.

For information about creating custom content types, see the following topics:

- [Creating content types](#)
- [Adding fields to content types](#)
- [Adding custom fields to user records](#)

## Advanced theme development

---

If your Version 5 Developer Portal is using modified content type templates, you must create these templates again for the Drupal 9 baseline. In Drupal 9 the templates are Twig files that define the actual HTML output for a particular piece of content. You can override a Twig template by copying the original template into the templates folder of your custom sub-theme, and then editing the template to your specification. The Developer Portal then uses your template in preference to the original one. For more information, see [Applying a modified content type template](#), and [Creating a sub-theme](#). You can also follow a guided example of how to create a new theme, see [Tutorial: Creating a custom theme for the Developer Portal](#).

Note:

Modifying Twig templates allows very fine-grained control over the structure of pages. However, it also means you might miss new features and defect fixes that are made to the original templates, as your Developer Portal is using your overrides instead of the originals. So, if you override a template, it is your responsibility to check the templates in the latest API Connect Version 10 releases, and to ensure that any equivalent changes that are needed to your overrides to maintain functional equivalence are made.

## Changing the page layout

---

If your Version 5 Developer Portal is using a different page layout, you will need to create this layout again for the Drupal 9 baseline. The page layout is defined by configuring which blocks appear in which regions. Blocks are controlled by using the Structure\_>Block layout options on the Developer Portal administrator dashboard.

For information about how to configure the page layout, see [Adding and changing the blocks displayed on Developer Portal pages](#).

## Changing the front page

---

If your Version 5 Developer Portal is using a different front page, you will need to create this front page again for the Drupal 9 baseline. The front page is configured from the Structure\_>Pages options on the Developer Portal administrator dashboard.

For information about how to configure the front page, see [Configuring the front page](#), and [Adding custom pages](#).

Further options that you might want to consider when designing your front page include:

- Change the banner block content or image: [Changing the front page banner block](#).
- Display featured API Products by creating a featured content block: [Changing the front page Featured Content block](#).
- Create custom blocks with your own HTML content: [Adding and changing the blocks displayed on Developer Portal pages](#).
- Set up the social block to include your organization Twitter feed: [Integrating Twitter data into the social block](#).

## Features no longer available in the Developer Portal

---

The following features that are available in IBM API Connect Version 5, are not available in IBM API Connect Version 10:

- Security questions - these can now be created inside an OpenID Connect provider.
- Two-factor authentication - this can now be performed inside an OpenID Connect provider.
- Support tickets - no Drupal 9 equivalent module is currently available.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Creating the Developer Portal

### About this task

In this tutorial, you are going to complete the following lessons:

### Enabling the Developer Portal through the API Manager

By proceeding with the following steps, you create an administrator account:

1. Log in to the API Manager
2. Click  Manage, then click Add, and select Create catalog.
3. Select the owner from the **Select user** list, then enter a **Title** for your catalog, for example `Production`.

### Create Catalog

Create Catalog

Enter the catalog summary details; you can fully configure the catalog after you create it

Select user

Apic Tutorial (tutor), myuser@myco.com

Title

Production

Name

production

Cancel Create

4. Click Create, then click  Manage.

# Manage

A catalog hosts a collection of API products that are visible in the associated developer portal when published

5. Click your new catalog, for example **Production**.

6. Click **Settings**.

7. Click Gateway Services. If the message **You currently don't have any gateway services** is displayed, click Edit, select gateway\_service, then click Save.

## Enable Gateway Services

8. Click Portal.

9. Click Create.

## Settings

10. Select a portal service to use. Click Create.

# Create Portal

### Portal Site

Create a portal site for the catalog

---

Select the portal service to use for this catalog

portal\_service ▼

URL (optional)

---

[Cancel](#) [Create](#)

After a few minutes, you receive an email with a link to your Developer Portal site for that catalog. The link is a single use only link for the administrator account.

Administrator (admin),

Your Developer Portal site has been created. You can log in as the 'admin' user by using the following one-time log in link. After you have logged in with the following link, you must change the password for the 'admin' user account immediately.

[https://portal.apidemo.demo.ibm.com/tutorial/production/user/reset/1/1591727237/h26vxzf2e51UqgK7vf10LNbHIVEC5VQ\\_AZAoKCYH72C/new/login](https://portal.apidemo.demo.ibm.com/tutorial/production/user/reset/1/1591727237/h26vxzf2e51UqgK7vf10LNbHIVEC5VQ_AZAoKCYH72C/new/login)

11. Click the email link. Click Sign in.

## What you did in this tutorial

In this tutorial, you completed the following activities:

- Enabled a Developer Portal site and created an administrator account.

## What to do next

- [Create a Developer Account and Application](#)

## Related information

- [Importing an API](#)

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Creating a private Developer Portal site

You can create a private version of the Developer Portal, so that authenticated users only can access content on the site. You might want to do this if you want to restrict public access to your content unless they are logged in.

## Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

## About this tutorial

In this tutorial, you are going to restrict access for all the content to authenticated users only. This gives access to all users from **Content Author** to **Superuser**, as they are all required to authenticate to access their roles. You will then add the login form to the home page, so that public users will be able to view the public home page that contains the login form only.

This tutorial takes you through the following steps:

1. [Export your configuration settings.](#)
2. [Restrict all permissions to authenticated users.](#)
3. [Restrict blocks to authenticated users.](#)
4. [Add login form to the home page.](#)

## Export your configuration settings

---

In case you make an error, or want to revert all of the changes made during this tutorial, you can back up your configuration settings to your machine before you make any changes.

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click **Manage** to display it.
3. Navigate to **Configuration > Development > Configuration synchronization > Export**.
4. Click **Export**.

## Restrict all permissions to authenticated users

---

1. If the administrator dashboard isn't displayed, click **Manage** to display it.
2. Navigate to **People > Permissions**.
3. Clear all check boxes that are associated with **ANONYMOUS USER**.
4. Click **Save permissions** at the end of the page.

## Restrict blocks to authenticated users

---

1. If the administrator dashboard isn't displayed, click **Manage** to display it.
2. Navigate to **Structure > Block layout**.
3. Find the row that is labeled **Main menu** and click **Configure**.
4. Find the setting **Roles** under the category **Visibility**.
5. Check the box **Authenticated user**.
6. Click **Save block**.
7. Repeat from step 3 for the **Footer menu**.
8. Click **Save blocks**.

## Add login form to the home page

---

1. If the administrator dashboard isn't displayed, click **Manage** to display it.
2. Navigate to **Structure > Pages**.
3. Click **Edit** on the **Welcome** page.
4. Navigate to **Panels > Content**.
5. Click + **Add new block**.
6. Find and click **User login**, under the **FORMS** section.
7. Clear the **Display title** check box.
8. Click **Add block**.
9. Rearrange the new login block so that it is underneath the **Welcome Banner**.
10. Click **Update and save**.

## What you did in this tutorial

---

On your Developer Portal, you restricted access for all the content to authenticated users only. Now when you access your home page as an unauthenticated user, you see that the login form appears underneath the welcome banner. Navigating to other URLs on the site presents an **unauthorized** page to appear.

When you log in, the login form disappears from the home page and you are able to access all of the pages that are visible to your role.

## What to do next

---

If you exported your configuration and now want to revert to your configuration as it was before this tutorial, then complete these steps:

1. Navigate to **Configuration > Development > Configuration synchronization > Import**.
2. Click **Choose file** and select your exported backup.
3. Click **Upload**.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Tutorial: Creating Accounts and Applications on the Developer Portal

---

This tutorial shows you how to create a developer account and register an application on the Developer Portal.

### Before you begin

---

You must have a Developer Portal installed, and created and published at least one API product.

If you do not have a Developer Portal available, complete the tutorial [Creating a Developer Portal](#).

If you don't have an API product available, you can download one of the following APIs, and then import and activate it:

- If your Sandbox catalog uses a DataPower® Gateway (v5 compatible) (as one of the gateways, or as the only gateway), download the [findbranch.txt](#) file to your local filesystem. Rename this file `findbranch.yaml`.
- If your Sandbox catalog uses a DataPower API Gateway, download the [findbranch\\_v6.txt](#) file to your local filesystem. Rename this file `findbranch.yaml`.

For more information about importing an API, see [Adding a REST API by importing an OpenAPI definition file](#).

## About this task

In this tutorial you are going to complete the following lessons:

- [Creating a developer account in the Developer Portal](#)
- [Creating a developer application in the Developer Portal](#)
- [Testing the Branches API in the Developer Portal](#)

Note: The administrator account cannot create an App, or register to an App. To create or register to an App, you must have a developer account. A developer account that has been assigned administrator privileges can create and register Apps.

## Creating a developer account in the Developer Portal

Take the following steps to create a developer account:

1. Open a Developer Portal at the previously specified URL, then click Create an account and complete the fields. If the Create an account link is not visible, log out as Admin from the Developer Portal first.  
Note: Your email is used as your user name for the Developer Portal. The email address must be different from the address used for creating the administrator account.
2. Go to the home page of the Developer Portal
3. Click Create an account.
4. Complete the sign up form. The email address you provide must be functional. Click Sign up. A confirmation message is sent to the email address provided in the form.

## What you did in this tutorial

In this tutorial, you completed the following activities:

- Created a developer account in the Developer Portal.
- Created and registered a new App, and subscribed it to a Plan.
- Tested an API in the Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Tutorial: Creating a custom theme for the Developer Portal

Customize the appearance of your Developer Portal home page, by generating a sub-theme, configuring the overrides.css file, and installing the newly customized theme.

---

### Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

Important: You're not permitted to include any IBM® API Connect code within any custom themes that you create.

---

### About this tutorial

The way to create a custom theme is to create a custom sub-theme of the standard API Connect theme that the Developer Portal uses by default. The sub-theme inherits all of the resources of the parent theme, and you can then override specific resources to configure the required customizations.

This tutorial takes you through the following lessons:

1. [Creating a sub-theme](#) by using the theme generator.
2. [Customizing the overrides.css file](#).
3. [Installing and enabling your customized theme](#).

---

### Creating a sub-theme

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Click Appearance >> Generate sub-theme. The Generate sub-theme window is displayed.
4. Enter a Sub-theme name, and select CSS for the Sub-theme type. (If you prefer, you can select SCSS, but this extension to CSS is for advanced theme developers, and isn't covered by this tutorial.)

## Generate sub-theme ☆

List Generate Update Settings

Home » Administration

The first step in customizing the branding of your Developer Portal is to create a custom sub-theme.

The sub-theme inherits all of the resources of the parent theme, and you can then override specific resources in the overrides.css file to configure your customizations. For more information, see: [Knowledge Center](#)

Complete the form below and you will be presented with a custom sub-theme to download.

Sub-theme name \*

A custom theme name, for example: 'mycustom\_theme' or 'banka\_theme'. The name does not need to end in '\_theme' but it is a common convention.

Sub-theme type

- CSS  
 SCSS

Your sub-theme can be setup to use either CSS or SCSS. SCSS is an extension to CSS and is for more advanced theme developers.

Template

5. Select the Default template to base your **sub-theme** on. You can create a sub-theme based on a color template. However, for this tutorial you use the default connect\_theme template.
6. Click Generate.
7. Download the generated sub-theme to a location of your choice, and extract all the files from the .zip file.

## Customizing the overrides.css file

On your computer, navigate to the files that you extracted. Find the overrides.css file in here banka\_theme/banka\_theme/css/overrides.css. You can now customize the overrides.css file.

1. Open the overrides.css file in your chosen editor.
2. Customize your sub-theme by entering the following elements into the overrides.css file:

```
/* Body of the home page */
body.path-frontpage.contexthome {
  color: #152935;
  background-color: #d1f0f7;
}

/* Header of the home page */
.navbar {
  background-color: #a0a0a0;
}

/* Footer of the home page */
footer.footer {
  background-color: #dee0e2;
}

footer.footer ul.nav > li > a {
  color: #454A4C;
}
```

```
File Edit Format View Help
/* Body of the home page */
body.path-frontpage.contexthome {
  color: #152935;
  background-color: #d1f0f7;
}

/* Header of the home page */
.navbar {
  background-color: #a0a0a0;
}

/* Footer of the home page */
footer.footer {
  background-color: #dee0e2;
}

footer.footer ul.nav > li > a {
  color: #454A4C;
}

Ln 19, Col 2    100%    Windows (CRLF)    UTF-8
```

3. Save the overrides.css file.

## Installing and enabling your customized theme

1. After you have finished updating the overrides.css file, compress all the theme files back into the .zip sub-theme file that you downloaded originally. Note that you can also include your own custom logo and favicon in your theme files, and these are then included as part of your theme when it is installed. These files must use the naming convention logo.svg, and favicon.ico, respectively. You can also change your logo and favicon at a later time, see [Changing the site logo](#) and [Changing the shortcut icon](#).
2. In the Developer Portal, click Appearance > Install new theme. The **Install new theme** window is displayed.
3. In Upload a module or theme archive to install click Browse, and navigate to your newly updated compressed theme file.
4. Click Install to install the theme onto your site.
5. Click Enable newly added themes, and find your new theme in the list of Disabled themes. Click Enable and set as default to set your new custom sub-theme as the default theme for your site.
6. Return to the Developer Portal home page by clicking Back to site. You can now see your custom theme.

## What you did in this tutorial

In this tutorial, you completed the following tasks:

- Created a sub-theme of your Developer Portal site by using the theme generator.
- Configured some customized home page elements in the overrides.css file of your sub-theme.
- Uploaded and installed your customized theme in your Developer Portal site.
- Successfully customized the appearance of your Developer Portal home page.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Using avatars

You can use an avatar generator to better represent the branding of your site, and add a sense of community for your users, than the default name initial that is provided in the Developer Portal.

### Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

### About this tutorial

In this task, you add the **Robohash** avatar generator to your Developer Portal site, and assign it as the primary avatar generator for all users.

This tutorial takes you through the following steps:

1. [Install the Robohash avatar generator.](#)
2. [Set Robohash as the preferred avatar generator for your site.](#)
3. [Configure the permissions for the Robohash avatar generator.](#)

The avatar of the admin user displays like this before the block is added.

## Enable the Robohash avatar generator

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Click Extend.
4. In the text box, enter `avatar` in the **Block description**.
5. Check the **Robohash** box, click Enable.

+ Install new module

Enter a part of the module name or description

Below is a list of installed modules. Modules that are installed and enabled are shown with a selected check box. To enable a module,

### ▼ AVATARS

<input type="checkbox"/>	<b>Adorable</b>	▶ Adds an Adorable.io avatar generator for Avatar Kit.
<input checked="" type="checkbox"/>	<b>Avatar Kit</b>	▶ Provides a selection of generated avatars for users.
<input type="checkbox"/>	<b>Gravatar</b>	▶ Adds Gravatar.com avatar generators for Avatar Kit.
<input checked="" type="checkbox"/>	<b>Letter Avatar</b>	▶ Adds a letter avatar generator based on the name of a user.
<input checked="" type="checkbox"/>	<b>Robohash</b>	▶ Adds Robohash avatar generators for Avatar Kit.

Enable

When the module is enabled, you receive a **Module Robohash has been enabled** message.

## Set Robohash as the preferred avatar generator for your site

1. If the administrator dashboard isn't displayed, click Manage to display it.
2. Navigate to Configuration > People > Avatar settings.
3. Click + **Add avatar generator**.
4. Enter `Robohash` as the label.
5. Check **Robohash** for the avatar generator.
6. Click Save

**Label \***

Robohash

**Avatar generator \***

Letter Avatar

Letter generated by the LetterAvatar library.

Robohash

Robots and monsters from Robohash.org

User preference

Avatar generator calculated based on user preference.

User upload

Image uploaded by the user to the site.

Save

7. You are then taken to the **Edit avatar generator Robohash** page. Select **Type: Robot Heads** and **Background: Transparent**. Click Save.

**Label \***

Robohash

**Type**

Robots

Robot Heads

Monsters

**Background**

Transparent

Places

Patterns

Save

[Delete](#)

8. You are now on the avatar generator page. Drag **Robohash** to be first in the list, and check **Enabled**, then click Save configuration.

You have now set **Robohash** as the preferred avatar generator for your site.

## Configure the permissions for the Robohash avatar generator

The default setting for the **Robohash** avatar generator is to generate avatars for users with **superuser** access only. In this example, the permissions are changed so that all **authenticated users** can access **Robohash**.

1. If the administrator dashboard isn't displayed, click Manage to display it.
2. Navigate to People > Permissions.
3. Find **Use Robohash** under the permission type **Avatar Kit**.
4. Check **AUTHENTICATED USER** for **Use Robohash** to enable the generator for all authenticated users.

Notice that all the boxes for this user type are then automatically checked because all of those users have the same permissions as an authenticated user, or higher.

PERMISSION	ANONYMOUS USER	AUTHENTICATED USER	FORUM MODERATOR	CONTENT AUTHOR	ADMINISTRATOR	SUPERUSER
Change own logout threshold	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
<b>Avatar Kit</b>						
Administer Avatar Kit <i>Warning: Give to trusted roles only; this permission has security implications. Manage settings for Avatar Kit.</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Use Letter Generator User can select Letter Generator avatar generator.	<input type="checkbox"/>	<input checked="" type="checkbox"/>				
Use Robohash User can select Robohash avatar generator.	<input type="checkbox"/>	<input checked="" type="checkbox"/>				

5. Click Save permissions.

## What you did in this tutorial

The avatars of all users now have the **robohash** avatar.

You can check that the avatar of the admin user has changed by looking at your site page.

You can check that the avatars of other users have changed by finding their published content and looking for their avatar. Or, you can navigate to Manage > People, click a user, and see their avatar on their profile page.

## What to do next

You can disable the **robohash** avatar generator.

1. Navigating to Extend > Disable module.
2. Search for **avatar** in the filter text box.
3. Check **Robohash**, click Disable
4. Click Disable.

You can also disable the **robohash** avatar generator by clearing it within Configuration > People > Avatar settings, or, reducing its preference by dragging it to a different order in the list. Click Save configuration.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Using image optimization

You can use image optimization on your Developer Portal site to enhance the use of images.

Optimized images do not overload your website and significantly increase its performance compared to using the original images. Your customer satisfaction and brand reputation improve with fast-loading and trimmed visual assets. Automatic optimization can save time and effort on editing and content moderation.

## Before you begin

---

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

## About this tutorial

---

In this task, you create an image style that is called `User picture`, and give it a scale and crop effect. Then, use the `User picture` as the **Picture** field in the user account.

This tutorial takes you through the following steps:

1. [Create the image style `User picture`](#).
2. [Edit the image style `User picture`](#).
3. [Assign `User picture` to the picture option in `Account settings`](#).

## Create the image style `User picture`

---

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Navigate to Configuration » Media » Image styles.
4. Click + Add image style.
5. Enter `User picture` in the **Image style name** block. Click Create new style

**Add image style** ☆

Home » Administration » Configuration » Media » Image styles

**Image style name \***

User picture | Machine name: user\_picture [Edit]

**Create new style**

You created the image style `User picture`.

## Edit the image style `User picture`

---

When you edit this style, you choose the width and height settings. Also, the part of the picture to retain during the crop, for example, the center.

1. If the administrator dashboard isn't displayed, click Manage to display it.
2. Navigate to Configuration » Media » Image styles.
3. Click Edit on the `User picture` style name.

## Edit style *User picture* ☆

Edit

Translate image style

Home » Administration » Configuration » Media » Image styles

### Preview

original (view actual size)

Add effect

Cancel

6. Click Save.

✓ Changes to the style have been saved.

You edited the image style **User picture**.

## Assign **User picture** to the **picture** option in **Account settings**

1. If the administrator dashboard isn't displayed, click Manage to display it.

2. Navigate to Configuration > People > Account settings > Manage display, then click Compact tab.

3. On the **Picture** row, click .
4. Select **User picture** from the **Image style** drop-down.
5. Click Update and Save.

You set the **User picture** image style for all accounts.

## What you did in this tutorial

You changed your account settings so that if the user displays a picture it is within the limits of the image style **User picture**.

To check the picture used by a user, navigate to Manage > People, click a user, and see their picture on their profile page. Right-click the image, then click **View image info**, you can see that the dimensions are scaled.

Type:	JPEG Image
Size:	29.95 KB (30,667 bytes)
Dimensions:	620px × 413px (scaled to 240px × 160px)
Associated Text:	Profile picture for user apicdemo1

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Adding a Back to top button

You might want to add a Back to top button, as a navigation enhancement to help your Developer Portal users get back to the top of the page that they are viewing, instead of scrolling.

### Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial.

### About this tutorial

In this tutorial, you add a Back to top button to your Developer Portal.

Before you begin, ensure that the **Back to top** module is installed and enabled:

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Click Extend.
4. In the text box, enter `back to top` in the **Block description**.
5. Check the **Back To Top** box, click Enable.

### Configure the Back to top module

1. If the administrator dashboard isn't displayed, click Manage to display it.
2. Navigate to Configuration > User interface > Back to Top.

## Back To Top ☆

[Home](#) » [Administration](#) » [Configuration](#) » [User interface](#)

- Prevent on mobile and touch devices  
Do you want to prevent Back To Top on touch devices?
- Prevent on administration pages and node edit  
Do you want to prevent Back To Top on admin pages?
- Prevent on front page  
Do you want to prevent Back To Top on front page?

### Trigger

Set the number of pixel which trigger the Back To Top button default 100

### Placement

Where should the Back To Top button appear?

### Button text

Set the text of the Back To Top button

3. Change any settings as required, or keep the defaults.
4. Click Save configuration

You now have a Back to Top button.

## What you did in this tutorial

You added a Back to Top button, as a navigation enhancement to help your users get back to the top of a page that they are viewing, instead of scrolling.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Adding a zoom effect

You can configure an **Image to Intense** option on your Developer Portal to give a zoom effect to your images.

Adding a zoom effect to the images on your Developer Portal can enhance the user experience.

## Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

## About this tutorial

In this task, you configure the image field of Article content types to use the zoom effect. Then, create an Article that uses an image, and test the zoom effect.

Before you begin, ensure that the **Intense images** module is installed and enabled:

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Click Extend.
4. In the text box, enter **Intense images** in the **Block description**.  
Note: If the **Intense images** module does not appear in the list see, [Installing custom modules](#).
5. Check the **Intense images** box, click Enable.

This tutorial takes you through the following steps:

1. [Configure the image field of Article content types to use the zoom effect.](#)
2. [Create an Article with an image.](#)
3. [Test the zoom effect.](#)

## Configure the image field of Article content types to use the zoom effect

1. Log in to your Developer Portal as an administrator.

2. If the administrator dashboard isn't displayed, click **Manage** to display it.
3. Navigate to **Structure** > **Content types** > **Article** > **Manage** display.
4. In **Image field Format**, select **Blazy** from the drop-down.
5. Click the edit icon .
6. In **Media Switcher** select **Image to Intense**, then click **Update**.

[+ Add group](#)

[Show row](#)

FIELD	LABEL	FORMAT
 Image	- Hidden -	

Format settings: **Blazy**

Image style <input type="text" value="Large (480x480)"/>	Responsive image <input type="text" value="- None -"/>
<b>MEDIA SWITCHER</b>	
Media switcher <input type="text" value="Image to Intense"/>	Use CSS background <input type="checkbox"/>
Lightbox image style <input type="text" value="- None -"/>	Thumbnail style <input type="text" value="- None -"/>
Aspect ratio <input type="text" value="- None -"/>	Lightbox caption <input type="text" value="- None -"/>

7. Click **Save**.

You changed the **Image field Format** for Article content types to use the zoom effect.

## Create an Article with an image

1. If the administrator dashboard isn't displayed, click **Manage** to display it.
2. Navigate to **Content** > **Add content** > **Article**.
3. Enter a title for your article, upload an image, and provide **Alternative text** for the image. Click **Save**.

You created an article and added an image.

## Test the zoom effect

1. If the administrator dashboard isn't displayed, click **Manage** to display it.
2. Click **Content**.
3. Click the Article that you created.
4. Hover your cursor over the article's image, the cursor turns into a cross, and if you click the image it enlarges.

You tested the zoom effect on the article that you created.

## What you did in this tutorial

You successfully configured the image field of Article content types to use the zoom effect. Then, created an Article that uses an image, and tested the zoom effect.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Creating a drop-down menu link

You can create and use drop-down menus, or nested menus, to enhance the use of your Developer Portal .

### Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

### About this tutorial

In this tutorial, you create a drop-down menu link on the **Main navigation** menu.

Note:

Although drop-down menu links can be created in the Developer portal, the drop-down menu doesn't expand by default. To make the drop-down menu expand, you need to use the **Superfish** module.

This tutorial takes you through the following steps:

1. [Add menu links to the main navigation menu.](#)
2. [Make the drop-down menu expand by using the Superfish module.](#)

The front page **Main navigation** displays like this before the changes are made.

## Add menu links to the main navigation menu

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click **Manage** to display it.
3. Navigate to **Structure > Menu > Main navigation > Add link**
4. Enter **API**'s in the **Menu link title**. Enter **/api** in the **Link**. Check **Show as expanded**, then click **Save**.  
Note: Ensure **Show as expanded** is checked as this is the parent link for the submenu links.
5. Add another menu link to the main navigation menu. Enter **API One** in the **Menu link title**. Enter **/product/10/api/5** in the **Link**. Select **-- API's** in the **Parent link**, then click **Save**.

### Add menu link

[Home](#) » [Administration](#) » [Structure](#) » [Menus](#) » [Main navigation](#)

#### Menu link title \*

The text to be used for this link in the menu.

#### Link \*

- The location this menu link points to.
- Start typing the title of a piece of content to select it. You can also enter an internal path such as `/node/add` or an external URL such as `http://example.com`. Enter `<frc`

Enabled

A flag for whether the link should be enabled in menus or hidden.

#### Description

Shown when hovering over the menu link.

Show as expanded

If selected and this menu link has children, the menu will always appear expanded. This option may be overridden for the entire menu tree when placing a menu block.

#### Parent link

The maximum depth for a link and all its children is fixed. Some menu links may not be available as parents if selecting them would exceed this limit.

#### Weight

Link weight among links in the same menu at the same depth. In the menu, the links with high weight will sink and links with a low weight will be positioned nearer the top.

**Save**

6. Add another menu link to the main navigation menu. Enter **API Two** in the **Menu link title**. Enter **/product/10/api/9** in the **Link**. Select **-- API's** in the **Parent link**. Select **1** in **Weight**, then click **Save**.

## Add menu link ☆

Home » Administration » Structure » Menus » Main navigation

### Menu link title \*

The text to be used for this link in the menu.

### Link \*

- The location this menu link points to.
- Start typing the title of a piece of content to select it. You can also enter an internal path such as `/node/add` or an external URL such as `http://example.com`. Enter `<from`

Enabled

A flag for whether the link should be enabled in menus or hidden.

### Description

Shown when hovering over the menu link.

Show as expanded

If selected and this menu link has children, the menu will always appear expanded. This option may be overridden for the entire menu tree when placing a menu block.

### Parent link

The maximum depth for a link and all its children is fixed. Some menu links may not be available as parents if selecting them would exceed this limit.

### Weight

Link weight among links in the same menu at the same depth. In the menu, the links with high weight will sink and links with a low weight will be positioned nearer the top.

Save

7. Navigate to Structure » Menus » Main navigation. The hierarchy of the menu links now looks like this:

+ Add link

### Title \*

Machine name: main

### Administrative summary

### Menu language

MENU LINK	ENABLED	OPERATIONS
+ Home	<input checked="" type="checkbox"/>	Edit ▾
+ API's	<input checked="" type="checkbox"/>	Edit ▾

+ API Two	<input checked="" type="checkbox"/>	Edit ▾
+ API Products	<input checked="" type="checkbox"/>	Edit ▾
+ Apps	<input checked="" type="checkbox"/>	Edit ▾

8. Navigate to the home page. The **API's** menu link that you added into the main navigation menu does appear but the submenus links don't expand when you hover over it.

## Make the drop-down menu expand by using the Superfish module

To make the drop-down menu expand when you hover over it, you need to use the **Superfish** module and configure the **Block Layout**.

1. If the administrator dashboard isn't displayed, click **Manage** to display it.
2. Navigate to **Extend**. Search for **superfish**, check the **Superfish** box, click **Enable**.

**+ Install new module**

superfish

Enter a part of the module name or description

Below is a list of installed modules. Modules that are i

8. Click Save blocks.

9. Navigate to the home page. The **APIs** menu link that you added into the main navigation menu does now expand when you hover over it.

## What you did in this tutorial

You created a drop-down menu link on the **Main navigation** menu.

## What to do next

You can consider any other uses of the drop-down menu to enhance your users experience on your Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Tutorial: Displaying blog posts on the front page

You can customize the appearance of the front page of your Developer Portal to display recent blog posts. You might use the blog posts to provide your users with information, such as service availability or marketing campaigns.

### Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

### About this tutorial

In this task, you create a view, customize that view to show blog posts, then embed that view on the front page of your Developer Portal site.

Before you begin, the front page looks like this:

This tutorial takes you through the following steps:

1. [Create a view](#).
2. [Customize the view](#).
3. [Embed the view on the front page of your Developer Portal](#).

### Create a view

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Navigate to Structure > Views > Add view.
4. In the **View name** block, enter a name for your view, for example Recent Blog posts.
5. Under **VIEW SETTINGS**, show **Content** of type **Blog Post** sorted by **Newest first**.

6. Check **Create a block** in **BLOCK SETTINGS**, and choose the number of blog posts that you want to be displayed.

The screenshot shows a configuration interface for a view, divided into four main sections:

- VIEW BASIC INFORMATION:** Includes a text input for "View name" (containing "Recent Blog posts") with a "Machine name: recent\_blog\_posts [Edit]" label, and a checkbox for "Description".
- VIEW SETTINGS:** Features three dropdown menus: "Show:" (set to "Content"), "of type:" (set to "Blog post"), and "sorted by:" (set to "Newest first").
- PAGE SETTINGS:** Contains a checkbox for "Create a page".
- BLOCK SETTINGS:** Includes a checked checkbox for "Create a block", a "Block title" input (containing "Recent Blog posts"), and a sub-section for "BLOCK DISPLAY SETTINGS" with "Display format:" (set to "Unformatted list") and "of:" (set to "titles (linked)"). Below this is an "Items per block" spinner set to "3" and a checkbox for "Use a pager".

At the bottom of the form are two buttons: "Save and edit" (highlighted in blue) and "Cancel".

7. Click Save and edit.

## Customize the view

You are now on the page where you can edit your view.

1. If you are not on the edit view page, navigate to **Structure > Views**, find the name of the view that you created, and click **Edit**.
2. Click **Unformatted list** in the **Format** section.
3. Select **Bootstrap List Group**, then click **Apply**.
4. Select **Content: Title** in the **Title field** drop-down, then click **Apply**.
5. Click **Save**.

## Embed the view on the front page of your Developer Portal

1. If the administrator dashboard isn't displayed, click **Manage** to display it.
2. Navigate to **Structure > Pages**.
3. Click **Edit** on the welcome page.
4. Click **Panels**, then **Content**.
5. Click **+Add new block**.
6. Select your new block, which is under **LISTS (VIEWS)**.

The "Add block" dialog box shows the following configuration options:

- Block description:** "Recent Blog posts"
- Display title**
- Items per block:** Spinner set to "3"
- Override title**
- Region:** Dropdown menu set to "Content"
- Add block** button (highlighted in blue)

7. Select the number of **Items per block**, then click **Add block**.

8. You can now rearrange your view to be where you would like it on the front page.

LABEL	PLUGIN ID	
<b>Content</b>		
+	Welcome Banner	block_content:2fcdb632-d4b9-44d9-b195-359e751966a1
+	Featured Content	featuredcontent
+	Recent Blog posts	views_block:recent_blog_posts-block_1
+	Getting Started	block_content:f2b7762b-97f4-4d51-b7dc-d6de5be6d0ce

9. Click Update and save.

## What you did in this tutorial

You can check that the view you created appears on the front page of your site page.

## What to do next

You can edit your view at any time by navigating to Structure > Views and selecting your view by its name. You can also modify or delete the view's layout on the front page by navigating back to the layout section of your page under Structure > Pages.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Displaying tweets on the front page

You can customize the appearance of the front page of your Developer Portal to display recent tweets. You might use the tweets to provide your users with information, such as service availability or marketing campaigns.

### Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

### About this tutorial

In this task, you create a view, customize that view to show tweets, then embed that view on the front page of your Developer Portal site.

Before you begin, the front page looks like this:

### Sign up

[Create a new account](#) and get started with our APIs. It's free to join.

### Explore our APIs

Take a look at our [API products](#) and quickly find APIs to construct a fully featured application

### Create

Subscribe to a plan and create your application to make use of our APIs.

This tutorial takes you through the following steps:

1. [Enable the Media entity twitter module.](#)
2. [Create an entity called Twitter to store the tweets.](#)
3. [Add media items.](#)
4. [Create a carousel view.](#)
5. [Customize the carousel view.](#)
6. [Embed the carousel view on the front page of your Developer Portal.](#)

## Enable the Media entity twitter module

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Click Extend, enter `media` in the search bar.
4. Check Media Entity Twitter, under **MEDIA**.

### ▼ MEDIA

<input checked="" type="checkbox"/>	<b>Enhanced Entity Browser</b>	► Provides some behavior and style enhancements to Entity Browsers, specifically for multiselect and image/media browsers.
<input checked="" type="checkbox"/>	<b>Media Entity Twitter</b>	► Media Entity Twitter provider.

5. Click Enable.

## Create an entity called Twitter to store the tweets

1. Navigate to Structure > Media types > Add media type.
2. In the **Name** field, enter `Twitter`.

### Media source \*

Twitter ▼

Media source that is responsible for additional logic related to this media type.

3. In the **Media source** dropdown, select `Twitter`.
4. Ensure that **Whether to use Twitter api to fetch tweets or not** value is set to No.

5. Ensure the values in the **FIELD MAPPING** section are set to - Skip field -.

**Name \***  
 Machine name: twitter  
 The human-readable name of this media type.

**Description**  
 Describe this media type. The text will be displayed on the *Add new media* page.

**Media source \***  
  
 The media source cannot be changed after the media type is created.

**MEDIA SOURCE CONFIGURATION**  
 Tweet URL field is used to store the essential information about the media item.

**Whether to use Twitter api to fetch tweets or not.**  
  
 In order to use Twitter's api you have to create a developer account and an application. For more information consult the readme file.

Generate thumbnails  
 If checked, Drupal will automatically generate thumbnails for tweets that do not reference any external media. In certain circumstances

**FIELD MAPPING**  
 Media sources can provide metadata fields such as title, caption, size information, credits, etc. Media can automatically save this information.

**Tweet ID**

**Twitter user information**

6. Click Save.

7. Click Manage display from the Edit dropdown for the new `Twitter` media type.

8. Drag the **Author** **on**, **Author** **by**, and **Thumbnail** fields to the **Disabled** section, and set the **FORMAT** of the **Tweet URL** field to **Twitter embed**.

FIELD	LABEL	FORMAT
✚ Tweet URL	Above	Twitter embed
<b>Disabled</b>		
✚ Language	Above	Language
✚ Name	Above	Smart trimmed
✚ Search result excerpt		
✚ Author on	- Hidden -	Default
✚ Author by	- Hidden -	Author
✚ Thumbnail	- Hidden -	Image

▶ CUSTOM DISPLAY SETTINGS

[Save](#)

9. Click Save.

## Add media items

1. Navigate to Content > Media > Add media > Twitter.
2. In the **Name** field, enter a name for the media, for example `Drupal Tweet`.

3. In the **Tweet URL** field, enter a URL, for example, <https://twitter.com/drupal/status/966443708160839684>.

**Name \***

**Tweet URL \***

<b>Revision information</b> No revision	<b>Revision log message</b>  Briefly describe the changes you
<b>URL alias</b> No alias

7. In the **FORMAT** section, click **Settings** next to **Slick Carousel**.

8. Set **Skin Main** to **Default**.

9. In the **CAPTION FIELDS** section, check **Media: Tweet URL**, and **Override main optionset**.

10. In the **OVERRIDEABLE OPTIONS** section, select **Autoplay** and **Dots** then, click Apply.

CAPTION FIELDS			
Media: Tweet URL <input checked="" type="checkbox"/>			
slick ID # <input type="text"/>	Cache <input type="text" value="&lt;No caching&gt;"/>		
Override main optionset <input checked="" type="checkbox"/>			
OVERRIDABLE OPTIONS			
Arrows <input type="checkbox"/>	Autoplay <input checked="" type="checkbox"/>	Dots <input checked="" type="checkbox"/>	Draggable <input type="checkbox"/>
Infinite <input type="checkbox"/>	Mousewheel <input type="checkbox"/>	Randomize <input type="checkbox"/>	Variable width <input type="checkbox"/>

**Block: Pager options**

**Items to display**  
  
Enter 0 for no limit.

**Offset (number of items to skip)**  
  
For example, set this to 3 and the first 3 items will not be displayed.

11. In the **PAGER** section, click **Items**, set the field to 0 then, click Apply.  
12. Click Save.

## Embed the view on the front page of your Developer Portal

1. Navigate to Structure > Pages.
2. Click **Edit** on the welcome page.
3. Click **Panels**, then **Content**.
4. Click +Add new block.

### LISTS (VIEWS)

- Active forum topics
- APIs
- Applications
- Blog
- New forum topics
- Product List
- Recent comments
- Recent content
- Tweet view
- Who's online
- Workbench: Current user: Overview block
- Workbench: Edits by user: Overview block
- Workbench: Recent content: Overview block

5. Select your new block, which is under **LISTS (VIEWS)**.
6. Deselect **Display title** then, click Add block.

7. You can now rearrange your view to be where you would like it on the front page.

LABEL	PLUGIN ID
<b>Content</b>

Get help	block_content:777e45d7-90c4-499e-8727-e08215cae05a

8. Click Update and save.

## What you did in this tutorial

You can check that the view you created appears on the front page of your site page.

## What to do next

You can edit your view at any time by navigating to Structure > Views and selecting your view by its name. You can also modify or delete the view's layout on the front page by navigating back to the layout section of your page under Structure > Pages.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Changing the front page of your Developer Portal

You can create and arrange content in your Developer Portal to provide a front page that aligns with your brand, and helps your users discover your APIs.

### Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

### About this tutorial

In this tutorial, you create some content for a page, and then change the front page to be your new page.

This tutorial takes you through the following steps:

1. [Creating some custom blocks.](#)
2. [Create and configure a page.](#)
3. [Adding the custom blocks to the page.](#)
4. [Changing the front page to be your new page.](#)

The front page displays like this before the changes are made.

## Creating some custom blocks

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Navigate to Structure > Block layout > Add custom block
4. Enter `Block 1` in the **Block description**.
5. In the body area, click **Source**, then enter this HTML:

```
<div class="tutorial_block_1 tutorial_block_frontpage">
<h1><span>Create with our APIs</span></h1>

<p><span>Welcome to our Developer Portal where you will find APIs to create your awesome app.</span></p>
</div>
```

### Add custom block ☆

[Home](#)

#### Block description \*

Block 1

A brief description of your block.

#### Body

Rich text editor toolbar with options: Bold, Italic, Underline, Strikethrough, Text color, Background color, Bulleted list, Numbered list, Indent, Outdent, Link, Unlink, Image, Video, Table, Table of contents, Format, Source, and Undo/Redo.

```
<div class="tutorial_block_1 tutorial_block_frontpage">
<h1><span>Create with our APIs</span></h1>

<p><span>Welcome to our Developer Portal where you will find APIs to create your awesome app.</span></p>
</div>
```

6. Check what the block looks like by clicking **Source** again.

## Add custom block ☆

Home

### Block description \*

Block 1

A brief description of your block.

### Body

Note: This block uses almost no inline-styling, instead it allows your theme to decide how it is rendered. The advantage of this set up is that you can easily change the rendering without modifying existing content in the database. Any styling that is required can be added to a custom theme. For more information, see [Tutorial: Creating a custom theme for the Developer Portal](#).

7. Click **Save**.

You have created Block 1, repeat steps 3 to 7 to create Block 2, Block 3, and Block 4.

8. Enter Block 2 in the **Block description**. In the body area, click **Source**, then enter this HTML:

```
<div class="tutorial_block 2 tutorial_block frontpage">
<p class="text-align-center">Explore and subscribe to our APIs.<br />
See what you come up with!</p>

<p class="text-align-center">&nbsp;</p>

<div class="bannerButtonRow text-align-center"><a class="button cta-btns--white_btn"
href="#_home_markdown_jenkins_workspace_Transform_in_SSMNED_10.0.4_com.ibm.apic.devportal.doc_product">Explore API
Documentation</a></div>
</div>
```

9. Enter Block 3 in the **Block description**. In the body area, click **Source**, then enter this HTML:

```
<div class="tutorial_block 3">
<p class="text-align-center"><a
href="#_home_markdown_jenkins_workspace_Transform_in_SSMNED_10.0.4_com.ibm.apic.devportal.doc_user_register">Create a new
account</a> and get started with our APIs. It's free to join.</p>
</div>
```

10. Enter Block 4 in the **Block description**. In the body area, click **Source**, then enter this HTML:

```
<div class="block-get-help">
<div class="get_help">
<div class="column col1">
<h3>Getting Help</h3>

<div>Be sure to check out these extra help resources.</div>
</div>

<div class="column col2">
<h4>Get Started</h4>

<div>Get started with our APIs by creating an account and exploring the documentation to find what's right for you.</div>

11. Click Next.

## Adding the custom blocks to the page

1. Leaving **Page title** blank, click + **Add new block**.
2. Select **Block 1** from the Custom block list.

3. Clear **Display title**, select **Top Left** from the Region drop down, then click Add block.

You added Block 1, repeat steps 1 to 3 to add Block 2, Block 3, and Block 4.

4. For Block 2 select region **Top Right**.
5. For Block 3 select region **Bottom left**.
6. For Block 4 select region **Bottom Right**.
7. Click **Finish**.
8. Click Update and save.

## Changing the front page to be your new page

Note: In this tutorial, you create a new page and swap it with the default. If errors are made, the default page is still available as a backup.

1. Navigate to Structure > Pages.
2. Click the **newhome** URL link for your new **Portal home** page, check that your page looks as designed.

3. Navigate to Configuration > System > Basic site settings
4. In **Front Page** region set Default front page field to **newhome**.
5. Click Save configuration.

## What you did in this tutorial

The front page of your Developer Portal is now changed and laid out with the blocks of content that you specified.

## What to do next

You can add further branding by adding content to your custom blocks such as images, or try to use one of the provided custom blocks such as the Featured Content Block. By default this block is English, you might want to consider adding versions in other languages.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Grouping products by category

You can configure the Developer Portal so that products are displayed in groups according to the category that they are tagged with.

You can use the **Views** module to fetch content from your Developer Portal site, such as lists of products, and present the content to users in different formats. You can combine multiple views on a new page to display whatever content you want.

## Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

## About this tutorial

In this tutorial you create three views in the Developer Portal, each one is configured to display a list of products according to their category. You then create a new page to show the views, where you see products that are grouped by category.

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click **Manage** to display it.
3. Create three new taxonomy tags.
  - a. Navigate to **Structure > Taxonomy > Tags**.
  - b. Click **Add term**.
  - c. Enter **Accounts** in the **Name** field and click **Save**.
  - d. Enter **Logistics** in the **Name** field and click **Save**.
  - e. Enter **Marketing** in the **Name** field and click **Save**.
  - f. Navigate to **Structure > Taxonomy > Tags** to show the list of the new tags.

**Tags** ☆

List Edit Manage fields Manage form display Manage display

Home » Administration » Structure » Taxonomy » Edit Tags

You can reorganize the terms in *Tags* using their drag-and-drop handles, and group terms under a parent term by sliding them under and to the right of the parent.

+ Add term

NAME	OPERATIONS
+ Accounts	Edit ▾
+ Logistics	Edit ▾
+ Marketing	Edit ▾

Save Reset to alphabetical

4. Create a view to display products with the **Accounts** category.
  - a. Navigate to **Structure > Views > Add new view**.
  - b. Enter **Accounts products** in the **View name** field.
  - c. In **View Settings**, select **Show: Content, of type: Product, sorted by: Newest first**, from the drop-down lists.
  - d. In **Page settings** leave the **Create a page** cleared.
  - e. In **Block settings** select **Create a block** and enter **Accounts products** in the **Block title**.
  - f. Ensure **Block Display Settings** has **Display format: Masonry, of: tiles (linked)**, and select **Use a pager**.

**PAGE SETTINGS**

- g. Click **Save and edit**.
- 5. Configure the view block settings.
  - a. Under the **Format** section click the **Fields** link next to the **Show** label.
  - b. In the dialog box, select the **Content** radio button then click **Apply**.
  - c. Select **Card** from the **View mode** drop-down list, then click **Apply**.
  - d. Click **Add** next to the **Filter Criteria** section.
  - e. In the dialog box, search for **tag** then select the option **Tags (apic\_tags)** from the list then click **Add and configure filter criteria**.
  - f. In the next dialog box, select the **Tags** radio button and the **Client-side hierarchical** then click **Apply and continue**.
  - g. Next set the **Operator** to **Is all of**, and from the **Select terms from vocabulary Tags** drop-down select **Accounts** and click **Apply**.
  - h. Under the **Advanced** options, click the **None** link next to the **CSS class** label.
  - i. If you are using the default API connect theme, then enter the CSS class name **product-view** and click **Apply**. If you have your own css class that you want to use, then enter its name in here instead.
  - j. Click **Save** to save all the changes.

- 6. Create a view for the Logistics products.
  - a. Select **Structure > Views**.
  - b. Navigate to the **Accounts products** view and select the **Duplicate** option.
  - c. Give the duplicated view the name **Logistics products** and click **Duplicate**.

- d. Click the Title **Accounts products** and change it to **Logistics products** and click **Apply**.
  - e. Under the **Filter Criteria** section click the **Content: Tags: (=Accounts)** link.
  - f. Change the value in the **Select terms from vocabulary Tags** drop-down to **Logistics** and click **Apply**.
  - g. Click **Save** to save all the changes.
7. Repeat step 6 for Marketing products.
  8. Next, create a page to display the views.
    - a. Select Structure, > Pages.
    - b. Click **Add page**.
    - c. Enter **Products by category** in the **Administrative title**, and **products-by-category** in the **Path**. Select the **Panels** option from the **Variant type** drop-down list then click **Next**.

Check any optional features you need to be presented with forms for configuring them. If you do not check them here you will still be able to utilize these features once the new page is created. If you are not sure, leave these unchecked.

**Next**

- d. Change the **Label** value to **Products grouped by category** and set the **Builder** to **Standard** then click **Next**.
- e. From the **Layout** drop-down list select the value **Three column** then click **Next**.
- f. Leave all the defaults on the next page and click **Next**.
- g. Click **+Add new block**.
- h. Select **Accounts products** from the **Lists (views)** section.
- i. Ensure that **Display tile** is selected and **Region** is set to **Left**, click **Add block**.

**Add block** ×

---

**Block description**

Accounts products

Display title

**Items per block**

Override title

**Region \***

Left

**Add block**

- j. Click **Add new block**. Select **Logistics products** view from the list and set the **Region** to **Middle**, click **Add block**.
- k. Click **Add new block**. Select **Marketing products** view from the list and set the **Region** to **Right**, click **Add block**.
- l. Enter **Products grouped by category** in the **Page title** field, and click **Finish**.

**Page title**  
  
 Configure the page title that will be used for this display.

[+ Add new block](#)

LABEL	PLUGIN ID	REGION
<b>Left</b>		
Accounts products	views_block:accounts_products-block_1	Left
<b>Middle</b>		
Logistics products	views_block:logistics_products-block_1	Middle
<b>Right</b>		
Marketing products	views_block:marketing_products-block_1	Right

[Previous](#) [Finish](#)

- From your API Manager, create three new products, or update existing ones, to give each one a category value of either Accounts, Logistics, or Marketing. Publish each of the products to the catalog with the configured Developer Portal.
- Check that the **Products grouped by category** page shows your published products by category.
  - Select **Structure > Pages**.
  - Click the **/products-by-category** path link.
  - You are redirected to the **/products-by-category** page and can see the products that you assigned to these categories.

## What you did in this tutorial

You created three new views in the Developer Portal, and configured each one to display a list of products according to their category. You then created a new page to show the views.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Adding a field to the sign up form

You might want to collect and store additional information about your Developer Portal users. For example, you might want to collect a department name, employee ID, or similar data when a user registers for an account on the portal.

### Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

### About this tutorial

In this tutorial, you will add a Department code field to the Sign up form. This field is required for all portal users.

This tutorial takes you through the following steps:

- [Adding a field to a user entity.](#)
- [Adding the new field to the Sign up form.](#)
- [Testing the new field.](#)

### Adding a field to a user entity

- Log in to your Developer Portal as an administrator.

2. If the administrator dashboard isn't displayed, click **Manage** to display it.
3. Navigate to **Configuration > People > Account settings > Manage fields**

You are on the **Manage fields** tab.

1. Click **+ Add field**.
2. In the **Select a field type** dropdown, select **Text (plain)**.
3. In the **Label** field enter, **Department code**.
4. Click **Save and continue**.

You are on the **Field settings** tab.

1. Accept the defaults of **Maximum length** (255) and **Allowed number of values** (Limited:1).
2. Click **Save field settings**.

You are on the **Edit** tab.

1. Add some help text. This is information that is displayed to the user to assist them completing the field on a form. Examples or links to further information are useful here. We are going to add an example in this tutorial.
2. Add **Example department code: DEP123**. into the **Help text** field.
3. Check the **Required field**.
4. Click **Save settings**.

The field has now been created. You are back on the **Manage fields** tab.

1. Check that **Department code** is a listed field.

## Adding the new field to the Sign up form

1. If the administrator dashboard isn't displayed, click **Manage** to display it.
2. Navigate to **Configuration > People > Account settings > Manage form display**

You are on the **Manage form display** tab. These tabs, one for each form, show the fields that are displayed from the user entity, and in which order.

1. Switch to the **Register** tab. Notice that initially the new **Department code** field is underneath the **Disabled row** in the page. This means that it isn't shown on the form.
2. Click the **Department code** icon and drag it so that it is between **Last name** and **Consumer organization** in the list.

The screenshot shows the 'Manage form display' interface for the 'Register' form. At the top, there are tabs for 'Settings', 'Manage fields', 'Manage form display', 'Manage display', and 'Translate account settings'. The 'Manage form display' tab is active. Below the tabs, there are sub-tabs for 'Default' and 'Register'. The 'Register' sub-tab is selected. A breadcrumb trail reads: 'Home > Administration > Configuration > People > Account settings > Manage form display'. There is a '+ Add group' button. A 'Show row weights' link is in the top right. The main area contains a table with two columns: 'FIELD' and 'WIDGET'. The table lists several fields, including 'First Name', 'Last Name', 'Department code', and 'Consumer organization', each with a 'Textfield' widget and a 'Textfield size: 60'. The 'Department code' and 'Consumer organization' rows are highlighted in light blue. Below the table is a 'Disabled' section containing a 'Language code' field with a 'Language select' widget. A gear icon is visible in the top right corner of the table area.

FIELD	WIDGET		
+ Status			
+ Username			
+ Roles			
+ Notify user about new account			
+ Current password			
+ E-mail address			
+ First Name	Textfield	Textfield size: 60	⚙️
+ Last Name	Textfield	Textfield size: 60	⚙️
+ Department code	Textfield	Textfield size: 60	⚙️
+ Consumer organization	Textfield	Textfield size: 60	⚙️
+ Password			
<b>Disabled</b>			
+ Language code	Language select		

3. Click **Save**.

## Testing the new field

1. Sign out as the Admin user.
2. Click **Create account**.
3. Observe that the **Department code** field is now part of the sign up form.

## What you did in this tutorial

You added a Department code field to the Sign up form, then tested the form to ensure that the `Department code` field is now part of the sign up form.

In reality, you would need to add this configuration in such a way that it is available for all sites. To achieve this you would include the configuration in your custom module. For more information, see [this Drupal documentation](#).

You might want to add extra validation to the Department code field on the Sign up form. For more information, see [Tutorial: Adding validation to a field on the sign-up form](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Adding validation to a field on the sign-up form

You might want to add extra validation to a field to help your Developer Portal users. For example, you might want to validate a department name, employee ID, or similar data when a user registers for an account on the portal.

### Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. You must have completed the tutorial about [Adding a field to the sign up form](#), where you added a Department code field to the Sign-up form.

### About this tutorial

In this tutorial, you add some validation to the Department code field on the Sign-up form. This is a required field for all portal users and is a string of the format `DEPnnn`, where `DEP` is the string prefix and `nnn` is a three-digit number, for example, `DEP123`. The validation is done by using a custom module that is already available in [IBM APIC Portal - addons](#). However, for more information, see [Custom module development: creating a module skeleton](#).

This tutorial takes you through the following steps:

1. [Cloning and packaging the validation module](#).
2. [Installing and enabling the validation module](#).
3. [Testing the validation in the sign up form](#).

Look at the files we will use in this link [IBM APIC Portal - addons](#).

- `user_field_example.info.yml` - this is the metadata for the module, defining things like the name and version, and containing other important information that is required by Drupal to import and enable the module.

```
name: 'IBM APIC Portal - user field example'
type: module
description: 'IBM API Connect Developer Portal tutorial - Example of validating a custom user field'
package: 'Custom'
core_version_requirement: ^8 || ^9
version: 1.0.0
project: 'user_field_example'
dependencies:
  - ibm_apim
  - auth_apic
```

- `user_field_example.module` - this contains a validation function and adds this to the Sign-up form by using the `hook_form_alter` function.

```
<?php
use Drupal\Core\Form\FormStateInterface;

/**
 * Implementation of hook_form_alter() to alter the Sign up form
 */
function user_field_example_form_alter(&$form, FormStateInterface $form_state, $form_id) {
  if ($form_id === 'user_register_form') {
    $form['#validate'][] = 'user_field_example_validate_department_code';
  }
}

/**
 * Validate the Department code field on the Sign up form.
 *
 * Valid entry = DEPnnn
 * where n = single figure digit.
 */
function user_field_example_validate_department_code($form, &$form_state) {
  $dept_code = $form_state->getValue('field_department_code')[0]['value'];
  $valid = preg_match('/^DEP\d{3}$/', $dept_code);
  if (!$valid) {
    $form_state->setErrorByName('field_department_code', t('Invalid department code.'));
  }
}
```

### Cloning and packaging the validation module

Validation is added to the **Department code** field on the Sign-up form by using a custom module.

1. Clone the custom module. Here is an example command if you are using Mac and Linux:

```
git clone https://github.com/ibm-apiconnect/devportal-addons
```

2. Package up the custom module.

```
cd devportal-addons/apic_v10/modules
tar -czf user_field_example.tgz user_field_example/
```

## Installing and enabling the validation module

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click **Manage** to display it.
3. Click **Extend > Install new module**.
4. Click **Choose file** from the **Upload a module or theme archive to install** section.
5. Browse to and select **user\_field\_example.tgz**, the packaged custom module that you created earlier. Click **Open**.
6. Click **Install**.
7. Click the **Enable newly added modules** link.
8. Enter **IBM APIC Portal - user field example** in the filter box.
9. Check the checkbox next to **IBM APIC Portal - user field example**.
10. Click **Enable**.

The module is now installed and enabled.

## Testing the validation in the sign-up form

1. Sign out as the Admin user.
2. Click **Create account**.
3. Complete all fields, set **Department code** to **ABC123**.
4. Click **Sign up**.
5. Observe the failure message and highlighting on the **Department code** field.

1 error has been found: **Department code**

API Developer Portal  
Sign up  
Sign up with nls Catalog  
User Registry

Username \*  
fred

Email address \*  
fred@apic.com

First Name \*  
Fred

Last Name \*  
Bloggs

Department code \*  
ABC123  
Invalid department code.

Consumer organization \*

6. Change the **Department code** field to **DEP245**, reenter the password and click **Sign up** to see that a valid code is accepted.

## What you did in this tutorial

You added some validation to the Department code field on the Sign-up form, then tested the form to ensure that the **Department code** field accepts only codes in the format of **DEPnnn**.

In reality, you would need to add this configuration in such a way that it is available for all sites. To achieve this availability, you would include the configuration in your custom module. For more information, see [Drupal custom modules](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Tutorial: Adding a field group to group fields in a content type

You might want to change how your user account pages are displayed when you have lots of fields.

If you have many fields for one of your content types, for example, a user, then you might want to group some of these fields together when you display them to other users, or when these fields are being edited inside a user form.

Field groups allow you to create a parent field that contains other fields, set up as children, within that group. The **Fieldgroup** forms come with default HTML wrappers such as vertical tabs, horizontal tabs, accordions, fieldsets, or div wrappers.

---

### Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial.

---

### About this tutorial

You will create field groups for various groups of user information. These groups can then be seen under the users own section on the account view and edit pages.

This tutorial takes you through the following steps:

1. [Adding a field group called Consumer Organization to the user account display.](#)
2. [Adding a field group called Personal Details to the user form display.](#)

---

## Adding a field group called Consumer Organization to the user account display

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Navigate to Configuration » People » Account settings » Manage display.
4. Click + **Add group**.
5. Select the group type **tab**.
6. Enter **Consumer Organization** as the label.
7. Click **Save and continue**.
8. Set the default state to **open**. This sets the tab to be expanded by default.
9. Click **Create group**.

[Home](#) » [Administration](#) » [Configuration](#) » [People](#) » [Account settings](#) » [Manage display](#)

Field group label

Consumer Organization 

Default state

open 

Description

ID

Extra CSS classes

**Create group**

When the group is created, you can assign fields to that group and rearrange the group on the page. After you create the group, you are on the **Manage Display** page.

1. Drag your new group from the disable section up into the higher section, just underneath **Picture**.
2. Drag **URL**, **Consumer Organization**, and **Consumer Organization URL** underneath the **Consumer Organization** group row, and slightly to one side. It fixates itself underneath the parent, and this is now set as the child of that group.

3. Click **Save**.

FIELD	LABEL	FORMAT	
⊕ First Name	Above	Plain text	⚙
⊕ Last Name	Above	Plain text	⚙
⊕ Member for			
⊕ Picture	Above	Image	Original image ⚙
⊕ Consumer Organization		Tab	Tab: open <a href="#">delete</a> ⚙
⊕ URL	Above	Plain text	⚙
⊕ Consumer organization	Above	Plain text	⚙
⊕ Consumer organization URL	Above	Plain text	⚙
⊕ State	Above	Default	
⊕ Language code	Above	Language	⚙

You are now able to see the new group of fields on the account page of a user.

**Consumer Organization**

**URL**  
/consumer-api/user-registries/574dbbea-e045-4457-91f3-2e8581a72d6c/users/e29beb15-2fd6-4583-854c-fe2854389ee7

**Consumer organization**  
Joe Smith

**Consumer organization URL**  
/consumer-api/orgs/7d9808be-eae5-44dc-a45c-551e17c2b7d1

## Adding a field group called Personal Details to the user form display

1. Navigate to Configuration > People > Account settings > Manage form display.
2. Click **Add group**.
3. Select the group type **tab**.
4. Enter **Personal Details** as the label.

[Home](#) » [Administration](#) » [Configuration](#) » [People](#) » [Account settings](#) » [Manage form display](#)

Add a new group \*

Tab

Label \*

Personal Details Machine name: group\_personal\_details [Edit]

Save and continue

5. Click **Save and continue**.
6. Set the default state to **open**. This sets the tab to be expanded by default.
7. Click **Create group**.

Again, when the group is created, you can assign fields to that group and then rearrange the group on the page as you require. After you create the group, you are returned to the **Manage Display** page.

1. Drag your new group from the disabled section up into the higher section, onto the highest row.
2. Drag **First Name**, **Last Name**, **User picture upload**, and **Avatar Generator** to underneath the **Personal Details** group row. It fixates itself underneath the parent, and this is now set as the child of that group.
3. Click **Save**.

You and your user can now see the new grouped section when you edit their account.

Before:

After:

## What you did in this tutorial

You have successfully created field groups for various groups of user information, and presented them to the user in its own section on the account view and edit pages.

You can check whether your field groups are applied, by viewing the profile of another user. Do this check by finding any other users published content and clicking the associated avatar. Or, from the administrator dashboard you can click People and then click a user. You can see the new Consumer Organization field group on their profile page. If you then click **Edit** for the user, you can see the Personal Details field group.

## What to do next

You can edit the user displays anytime by navigating back to Configuration > People > Account settings > Manage display or Manage form display.

You can delete the field group by clicking the **delete** button in the field group row on either of these pages. You can also modify the type of group it is, for example, vertical tabs, horizontal tabs, accordions, and field sets.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Adding a custom block to the front page

You can customize the appearance of the front page of your Developer Portal by adding a custom block. Blocks are boxes of content that are rendered into an area, or region, of a web page such as the Products page or Apps page that can be displayed in regions, such as footer or sidebar, on your page.

### Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so. The tutorial [Adding a custom block to a page other than the front page](#) explains how to add a custom block to any other page.

### About this tutorial

In this tutorial, you create a block that contains a marketing announcement and add it to the front page of your Developer Portal.

This tutorial takes you through the following steps:

1. [Creating a custom block.](#)
2. [Adding the custom block to the front page.](#)

The front page displays like this before the block is added.

### Creating a custom block

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Navigate to Structure > Block layout > Add custom block.
4. Enter `Marketing Info` in the **Block description**.
5. In the body area, click **Source**, then enter this HTML:

```
<div class="tutorial_block_1 tutorial_block_frontpage">
<h1><span>Create with our APIs</span></h1>
<p><span>Welcome to our Developer Portal where you will find APIs to create your awesome app.</span></p>
</div>
```

Add block
✕

**Block description**  
Marketing Info

**Title \***

Display title

**Region \***

Content ▾

Add block

9. Drag **Marketing Info** to the order you want, in this example before the **Welcome banner** content.
10. Click **Update and save**.

## What you did in this tutorial

The front page now has the new block with a marketing message.

## What to do next

You can add further branding by adding content to your custom blocks such as images, or try using one of the provided custom blocks such as the Featured Content Block. Instead of using inline styling like that provided in the html, adopt best practice by adding class selectors and developing a custom theme. By default this block is English, you might want to consider adding translated versions.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Adding a custom block to a page other than the front page

You can customize the appearance of a page on your Developer Portal by adding a custom block. Blocks are boxes of content that are rendered into an area or region of a web page, such as the Products page or Apps page. Blocks can be displayed in regions, such as footer or sidebar, on your page.

## Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so. The tutorial [Adding a custom block to the front page](#) explains how to add a custom block to the front page.

## About this tutorial

In this tutorial, you create a custom block that contains extra guidance on application creation and registration, and add that custom block to the Apps page of your Developer Portal.

The Apps page displays like this before the block is added.

This tutorial takes you through creating a custom block, and configuring it to show on the Apps page.

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click **Manage** to display it.
3. Navigate to **Structure > Block layout > Add custom block**.
4. Enter **App Info** in the **Block description**.
5. In the body area, click **Source**, then enter this HTML:

```
<div class="tutorial_block_2">
<p>Before you can use an API, you must create an application. When you create an application you are provided with a client ID and client secret for the application. You must supply the client ID when you call an API that requires you to identify your application by using a client ID, or a client ID and client Secret.</p>
</div>
```

**Block description \***

  
A brief description of your block.

**Body**

**Source**

```
<div class="tutorial_block_2">
<p>Before you can use an API, you must create an application. When you create an application you are provided with a client ID and client secret for the application. You must supply the client ID when you call an API that requires you to identify your application by using a client ID, or a client ID and client Secret.</p>
</div>
```

Text format: Full HTML [About text formats](#)

6. To see a preview of the block click **Source** again.

**Block description \***

  
A brief description of your block.

**Body**

**Source**

Before you can use an API, you must create an application. When you create an application you are provided with a client ID and client secret for the application. You must supply the client ID when you call an API that requires you to identify your application by using a client ID, or a client ID and client Secret.

Text format: Full HTML [About text formats](#)

Note: This block uses almost no inline-styling, instead it allows your theme to decide how it is rendered. The advantage of this set up is that you can easily change the rendering without modifying existing content in the database. Any styling that is required can be added to a custom theme. For more information, see [Tutorial: Creating a custom theme for the Developer Portal](#).

7. Click **Save**.

8. Enter `Creating an App` in the **Title** box, keep the **Display title** selected.

✓ Basic block *App Info* has been created.

**Block description:** App Info

**Title \***

Creating an App

Machine name: appinfo [Edit]

This field supports tokens. [Browse available tokens.](#)

Display title

9. Click **Pages** in the **Visibility** list.

10. Enter `/application` in the **Pages** text area, keep the **Show for the listed pages** selected.

11. Select **Secondary** from the **Region** drop-down menu.

12. Click **Save block**.

13. Click **Save blocks**.

## What you did in this tutorial

The **Apps** page now has an additional block with a guidance message.

## What to do next

Instead of using inline styling like that provided in the html, adopt best practice by adding class selectors and developing a custom theme. By default this block is English, so you might want to consider adding translated versions.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Configuring the RobotsTxt file

You can control the access of a visiting Web robot. You can configure the `robots.txt` file that exists on your web server, usually at the root level, to control access. Web robots are programs that crawl through the web to obtain web content for all the sites that are visited, and provide indexing for better performance of search engines. You can also specify separate rules for different robots.

## Why would I want to edit Drupal's pre-existing robots.txt file?

Malicious robots might choose not to honor the `robots.txt` file, and by editing this file you are broadcasting which sites you do not want others to see. Therefore, you should not use this file to hide sensitive data. Instead, you might want to edit your `robots.txt` file to:

- Prevent duplicate information from being identified on your site
- Prevent internal pages from appearing in search engines
- Prevent private pages from appearing in search engines
- Prevent particular images, files, and so on, from being crawled
- Specify a `crawl-delay` attribute to prevent robots from overloading your server at load time
- Exclude a particular robot

## Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial.

## About this tutorial

---

You will edit the pre-existing `robots.txt` file and exclude access to a visiting robot called BadBot.

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click **Manage** to display it.
3. Navigate to **Configuration** » **Search and Metadata** » **RobotsTxt**.

### RobotsTxt

[Home](#) » [Administration](#) » [Configuration](#) » [Search and metadata](#)

See <http://www.robotstxt.org/> for more information concerning how to write your `robots.txt` file.

#### Contents of robots.txt

```
#
# robots.txt
#
# This file is to prevent the crawling and indexing of certain parts
# of your site by web crawlers and spiders run by sites like Yahoo!
# and Google. By telling these "robots" where not to go on your site,
# you save bandwidth and server resources.
#
# This file will be ignored unless it is at the root of your host:
# Used: http://example.com/robots.txt
# Ignored: http://example.com/site/robots.txt
#
# For more information about the robots.txt standard, see:
# http://www.robotstxt.org/robotstxt.html

User-agent: *
# CSS, JS, Images
Allow: /core/*.css$
Allow: /core/*.css?
Allow: /core/*.js$
Allow: /core/*.js?
```

**Save configuration**

4. Enter the policy to exclude access to a robot called BadBot.

```
User-agent: BadBot
Disallow: /
```

5. Click **Save Configuration** to save your changes.

## What you did in this tutorial

---

You have now successfully customized the `robots.txt` file. Robots now use this updated file to decide where they can crawl on your site. The BadBot robot is excluded access.

You can check whether your `robots.txt` file is successfully changed by navigating to your site and appending `/robots.txt`. You should see the content you entered into that file.

```
#
# robots.txt
#
# This file is to prevent the crawling and indexing of certain parts
# of your site by web crawlers and spiders run by sites like Yahoo!
# and Google. By telling these "robots" where not to go on your site,
# you save bandwidth and server resources.
#
# This file will be ignored unless it is at the root of your host:
# Used:    http://example.com/robots.txt
# Ignored: http://example.com/site/robots.txt
#
# For more information about the robots.txt standard, see:
# http://www.robotstxt.org/robotstxt.html

User-agent: BadBot
Disallow: /

User-agent: *
# CSS, JS, Images
Allow: /core/*.css$
Allow: /core/*.css?
Allow: /core/*.js$
Allow: /core/*.js?
```

For more information on how to edit your `robots.txt` file, see <https://www.robotstxt.org/>.

---

## What to do next

You can edit the `robots.txt` at any time by navigating back to the page within the configuration settings. You might choose to duplicate this file across all of your sites, or choose different policies for different sites.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## Tutorial: Configuring the SecurityTxt file

You can use the `security.txt` file to provide your users with a standard way to report security vulnerabilities with your site.

The `security.txt` file is a file format that is designed to help your users disclose any security vulnerability. For more information, see [securitytxt.org](https://securitytxt.org) or [A File Format to Aid in Security Vulnerability Disclosure](#).

---

## Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial.

---

## About this tutorial

You edit the `security.txt` file and provide information such as a URL of a contact page, for your customers to use if they have a security vulnerability.

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Navigate to Configuration > System > Security.txt.

Back to site Workbench Manage Shortcuts admin

Content Structure Appearance Extend Configuration People Reports Help

## Security.txt configure

Configure

Home » Administration » Configuration » System

A security.txt file provides a standard way for people to find out how to report security issues with your site. The new [Security.txt standard](#) is currently a [draft RFC](#).

Enable the security.txt file for your site

When enabled the security.txt file will be accessible to all users with the "view securitytxt" permission, you will almost certainly want to give this permission to everyone i.e. authenticated and anonymous users.

**CONTACT**

You must provide at least one means of contact: email, phone or contact page URL.

**Email**

Typically this would be of the form `security@example.com`. Leave it blank if you do not want to provide an email address.

**Phone**

Use full international format e.g. `+1-201-555-0123`. Leave it blank if you do not want to provide a phone number.

**URL**

The URL of a contact page which should be loaded over HTTPS. Leave it blank if you do not want to provide a contact page.

**ENCRYPTION**

Allow people to send you encrypted messages by providing your public key.

**Public key URL**

The URL of page which contains your public key. The page should be loaded over HTTPS.

**POLICY**

A security and/or disclosure policy can help security researchers understand what you are looking for and how to report security vulnerabilities.

**Security policy URL**

The URL of a page which provides details of your security and/or disclosure policy. Leave it blank if you do not have such a page.

**ACKNOWLEDGEMENT**

A security acknowledgements page should list the individuals or companies that have disclosed security vulnerabilities and worked with you to fix them.

**Acknowledgements page URL**

The URL of your security acknowledgements page. Leave it blank if you do not have such a page.

Save configuration

4. Select the checkbox for **Enable the security text file for your site**.
5. Complete the form for your requirements.
6. Click **Save Configuration** to save your changes.

## What you did in this tutorial

You successfully customized the `security.txt` file.

## What to do next

You can edit the `security.txt` at any time by navigating back to the page within the configuration settings.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorials for using custom modules in the Developer Portal

You can configure custom modules to complete specific actions in the Developer Portal.

Note: You must have administrator access to complete the tutorials.

You can configure rules for the following events that occur in the Developer Portal:

- Change the profile page to display **firstname last name**, instead of **username**.
- Add validation to a field on the sign up form.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Tutorial: Changing the profile page to display firstname lastname, instead of username

You might want to change the profile page of your users on your Developer Portal to display their **firstname** and **lastname** rather than their **username**.

### Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial.

### About this tutorial

In this tutorial, you change the profile page of your users to display their **firstname** and **lastname** rather than their **username**. The change to the profile page is done by using the custom module **change account display** that is already available in [IBM APIC Portal - addons](#). However, for more information, see [Custom module development: creating a module skeleton](#).

This tutorial takes you through the following steps:

1. [Cloning and packaging the change account display module](#).
2. [Installing and enabling the change account display module](#).

### Cloning and packaging the change account display module

1. Clone the custom module. Here is an example command if you are using Mac and Linux:

```
git clone https://github.com/ibm-apiconnect/devportal-addons
```

2. Package up the custom module.

```
cd devportal-addons/Drupal8/modules  
tar -czf change_account_display.tgz change_account_display/
```

### Installing and enabling the change account display module

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click Manage to display it.
3. Click **Extend > Install new module**.
4. Click **Browse** from the **Upload a module or theme archive to install** section.
5. Navigate to and select the packaged custom module that you created earlier. For example, **change\_account\_display.tgz**, then click **Open**.

## API Developer Portal

### Update manager

✓ Installation was completed successfully.

#### change\_account\_display

- Installed *change\_account\_display* successfully

#### Next steps

- [Install another module](#)
- [Enable newly added modules](#)
- [Administration pages](#)

6. Click **Install**.

7. Click the **Enable newly added modules** link.
8. Enter **Change Account Display** in the filter box.
9. Check the check box next to **Change Account Display**.
10. Click **Enable**.

The module is now installed and enabled.

## Test the profile page change

1. Sign out as the Admin user.
2. Sign in as a user of your Developer Portal.
3. Click **My account** from the drop down next to your **username**.
4. Notice that your **firstname** and **lastname** are now displayed.

## What you did in this tutorial

You used a custom module to change the profile page display for the users of your Developer Portal.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Adding validation to a field on the sign-up form

You might want to add extra validation to a field to help your Developer Portal users. For example, you might want to validate a department name, employee ID, or similar data when a user registers for an account on the portal.

## Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. You must have completed the tutorial about [Adding a field to the sign up form](#), where you added a Department code field to the Sign-up form.

## About this tutorial

In this tutorial, you add some validation to the Department code field on the Sign-up form. This is a required field for all portal users and is a string of the format **DEPnnn**, where **DEP** is the string prefix and **nnn** is a three-digit number, for example, **DEP123**. The validation is done by using a custom module that is already available in [IBM APIC Portal - addons](#). However, for more information, see [Custom module development: creating a module skeleton](#).

This tutorial takes you through the following steps:

1. [Cloning and packaging the validation module](#).
2. [Installing and enabling the validation module](#).
3. [Testing the validation in the sign up form](#).

Look at the files we will use in this link [IBM APIC Portal - addons](#).

- `user_field_example.info.yml` - this is the metadata for the module, defining things like the name and version, and containing other important information that is required by Drupal to import and enable the module.

```
name: 'IBM APIC Portal - user field example'
type: module
description: 'IBM API Connect Developer Portal tutorial - Example of validating a custom user field'
package: 'Custom'
core_version_requirement: ^8 || ^9
version: 1.0.0
```

```

project: 'user_field_example'
dependencies:
  - ibm_apim
  - auth_apic

```

- user\_field\_example.module - this contains a validation function and adds this to the Sign-up form by using the `hook_form_alter` function.

```

<?php
use Drupal\Core\Form\FormStateInterface;

/**
 * Implementation of hook_form_alter() to alter the Sign up form
 */
function user_field_example_form_alter(&$form, FormStateInterface $form_state, $form_id) {
  if ($form_id === 'user_register_form') {
    $form['#validate'][] = 'user_field_example_validate_department_code';
  }
}

/**
 * Validate the Department code field on the Sign up form.
 *
 * Valid entry = DEPnnn
 * where n = single figure digit.
 */
function user_field_example_validate_department_code($form, &$form_state) {
  $dept_code = $form_state->getValue('field_department_code')[0]['value'];
  $valid = preg_match('/^DEP\d{3}$/i', $dept_code);
  if (!$valid) {
    $form_state->setErrorByName('field_department_code', t('Invalid department code.'));
  }
}

```

## Cloning and packaging the validation module

Validation is added to the `Department code` field on the Sign-up form by using a custom module.

1. Clone the custom module. Here is an example command if you are using Mac and Linux:

```
git clone https://github.com/ibm-apiconnect/devportal-addons
```

2. Package up the custom module.

```
cd devportal-addons/apic_v10/modules
tar -czf user_field_example.tgz user_field_example/
```

## Installing and enabling the validation module

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click **Manage** to display it.
3. Click **Extend > Install new module**.
4. Click **Choose file** from the **Upload a module or theme archive to install** section.
5. Browse to and select `user_field_example.tgz`, the packaged custom module that you created earlier. Click **Open**.
6. Click **Install**.
7. Click the **Enable newly added modules** link.
8. Enter `IBM APIC Portal - user field example` in the filter box.
9. Check the checkbox next to `IBM APIC Portal - user field example`.
10. Click **Enable**.

The module is now installed and enabled.

## Testing the validation in the sign-up form

1. Sign out as the Admin user.
2. Click **Create account**.
3. Complete all fields, set `Department code` to `ABC123`.
4. Click **Sign up**.

5. Observe the failure message and highlighting on the **Department code** field.

The screenshot shows a sign-up form titled "API Developer Portal Sign up with nls Catalog User Registry". The form includes fields for Username, Email address, First Name, Last Name, Department code, and Consumer organization. The Department code field contains "ABC123" and has a red error message: "Invalid department code." A notification bar at the top of the form area states "1 error has been found: Department code".

6. Change the **Department code** field to **DEP245**, reenter the password and click **Sign up** to see that a valid code is accepted.

## What you did in this tutorial

You added some validation to the Department code field on the Sign-up form, then tested the form to ensure that the **Department code** field accepts only codes in the format of **DEPnnn**.

In reality, you would need to add this configuration in such a way that it is available for all sites. To achieve this availability, you would include the configuration in your custom module. For more information, see [Drupal custom modules](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Using a custom weighting sort order on the product list page

You can use a custom weighting to sort your products on the API products list page of your Developer Portal.

### Before you begin

You must have a Developer Portal enabled, and you must have administrator access to complete this tutorial. The tutorial [Creating the Portal](#) explains how to enable the portal if you have not already done so.

### About this tutorial

In this task, you set up a weighting sort criteria and use it to list your products, on the API Products page, in a particular order. You set up the weightings so the order reads, Product3, Product1, and Product2.

This tutorial takes you through the following steps:

1. [Add a custom integer field to the API content type.](#)
2. [Modify the Products view to change the sort order.](#)
3. [Add a weighting to each Product.](#)

The API Products page displays Product1, Product2, and Product3 in this order before the weightings are added.

## API Products

### Add a custom integer field to the API content type

1. Log in to your Developer Portal as an administrator.
2. If the administrator dashboard isn't displayed, click **Manage** to display it.
3. Click **Structure > Content types > Product > Manage fields**.
4. Click **+ Add field**.
5. In **Add a new field**, select **Number (Integer)**. Enter **Weighting** as the label title.

#### Add field

[Home](#) » [Administration](#) » [Structure](#) » [Content types](#) » [Product](#) » [Manage fields](#)

#### Add a new field

Number (integer) ▼

or

#### Re-use an existing field

- Select an existing field - ▼

#### Label \*

Weighting

Machine name: field\_weighting [Edit]

**Save and continue**

6. Click **Save and continue**.
7. Leave the **Allowed number of values** set to 1 and click **Save field settings**.
8. Enter 0 as the default value, click **Save settings**.
9. Click **Save**.

The **Weighting** field now shows in the **Manage fields** list.

### Modify the Products view to change the sort order

1. If the administrator dashboard isn't displayed, click **Manage** to display it.
2. Navigate to **Structure > Views**, scroll down to the **Products** view and click **Edit**.
3. In the **SORT CRITERIA** section click **Add**.
4. Enter **weight** in the search box. Then, select **Weighting (field\_weighting)**, and click **Apply** (all displays).
5. Leave the **Order** as **Sort ascending**, click **Apply** (all displays).
6. In the **SORTCRITERIA** section, select **Rearrange** from the drop-down menu next to the **Add**.

Rearrange sort criteria ✕

**For**  
All displays (except overridden) ▾

[Show row weights](#)

	REMOVE
<span>⊕</span> Content: Title Exposed	<a href="#">Remove</a>
<span>⊕</span> Content: Version (apic_version) Exposed	<a href="#">Remove</a>
<span>⊕</span> Content: Changed Exposed	<a href="#">Remove</a>
<span>⊕</span> Content: Authored on Exposed	<a href="#">Remove</a>
<span>⊕</span> Content: Rating (apic_rating) Exposed	<a href="#">Remove</a>
<span>⊕</span> Content: Weighting (field_weighting) asc	<a href="#">Remove</a>

Apply (all displays)
Cancel

7. For all rows except **Weighting (field\_weighting)**, click **Remove**.
8. Click **Apply (all displays)**.

You modified the **Products** view to sort based on **Weighting (field\_weighting)**.

## Add a weighting to each Product

1. If the administrator dashboard isn't displayed, click **Manage** to display it.
2. Click **Content**, and select **Product** from the **Content type**, click **Filter**. A list of available Products on your site is displayed.

+ Add content

Title Content type Published status Language  
 Product ▾ - Any - ▾ - Any - ▾

Filter

**Action**  
Delete content ▾

Apply to selected items

<input type="checkbox"/>	TITLE	CONTENT TYPE	AUTHOR	STATUS	UPDATED	OPERATIONS
<input type="checkbox"/>	Product3	Product	admin	Published	06/18/2019 - 15:34	<span style="border: 1px solid #ccc; border-radius: 3px; padding: 2px 5px;">Edit</span> ▾
<input type="checkbox"/>	Product2	Product	admin	Published	06/18/2019 - 15:32	<span style="border: 1px solid #ccc; border-radius: 3px; padding: 2px 5px;">Edit</span> ▾
<input type="checkbox"/>	Product1	Product	admin	Published	06/18/2019 - 15:31	<span style="border: 1px solid #ccc; border-radius: 3px; padding: 2px 5px;">Edit</span> ▾

3. For Product1 click edit, in the **Weighting field**, select 2 as the value, click **Save**.
4. For Product2 click edit, in the **Weighting field**, select 3 as the value, click **Save**.
5. For Product3 click edit, in the **Weighting field**, select 1 as the value, click **Save**.

The API Products page displays Product3, Product1, and Product2 in this order after the weightings are added.

## What you did in this tutorial

You changed the order that the API Products appear on the products page.

## API Products

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Tutorial: Synchronizing application credentials from the Developer Portal with an external server

You can synchronize application credentials from the Developer Portal with an external server.

### Before you begin

You must have administrator access to complete this task.

Download the [Application credential synchronization](#) module.

### About this task

In this tutorial, you can synchronize the application credentials from the Developer Portal with an external credentials server that your organization might already have. This is done by configuring a custom module and installing it in the Developer Portal.

The file that you have downloaded is a custom module that contains multiple methods that can be configured with your REST endpoints, and any further specifications that you want to define, to synchronize your Developer Portal application credentials with an external credential server.

For more information, see [Custom module development: background and prerequisites](#).

### Procedure

To configure the custom module to synchronize application credentials:

1. In the `appcreds_sync.module` file, replace `example.com` with your REST endpoint for the following method types:
  - `http://example.com/app/create`
  - `http://example.com/app/delete`
  - `http://example.com/app/creds/create`
  - `http://example.com/app/creds/update`
  - `http://example.com/app/creds/delete`
  - `http://example.com/app/clientid/reset`
  - `http://example.com/app/clientsecret/reset`
2. Optional: Replace `username` and `password` with your username and password in the `_appcreds_sync_json_http_request` function:

```
('username' . ':' . 'password')
```

Note: You can also configure the SSL settings if you need to.

3. After you have finished configuring the module, click Save, and zip up the module.

To install the configured custom module in the Developer Portal:

4. On the administrator dashboard, click Modules
5. Click Install new modules.
6. You can enter a path to the module in the Install from a URL field. Alternatively, you can upload a module under the Upload a module or theme archive to install heading.
7. Click Install.

To enable the module:

8. On the administrator dashboard, click Modules.
9. Search for and enable the custom module.
10. Click Save configuration.

## Results

You have configured a custom module that synchronizes application credentials from the Developer Portal, installed that module in the Developer Portal, and enabled it. No further action or configuration is required.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## Reference information

Reference information for IBM® API Connect, including summary reference material for the developer toolkit command-line tool (CLI), a link to the API Connect Version 10.x Whitepaper, and information about the API Connect platform REST APIs.

Reference item	Description
<a href="#">Command-line tool reference for the developer toolkit</a>	Summary reference material for each of the available commands for the developer toolkit command-line tool (CLI). (For more detailed information about how to use the command-line tool, see <a href="#">Using the developer toolkit command-line tool</a> .)
<a href="#">Command-line tool reference for the Developer Portal</a>	Summary reference material for each of the available commands for the Developer Portal command-line tool (CLI). (For more detailed information about how to use the command-line tool, see <a href="#">Using the Developer Portal command-line tool</a> .)
<a href="#">API Connect REST APIs</a>	The platform REST APIs that can be used to manage the API Connect cloud configuration, access the API provider capability, and use the consumer API microservice.
<a href="#">API Connect v10.x Whitepaper</a>	A comprehensive technical guide to best practices, considerations, and deployment options for API Connect. The whitepaper covers the major components of API Connect, as well as considerations for configuring different clouds and environments, to help users with their API strategies. The target audience for the whitepaper are solution and integration architects.

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic

## apic analytics-services

Analytics Services operations

### Synopsis

---

Analytics Services operations

```
apic analytics-services [flags]
```

### Options

---

```
--availability-zone string  Availability Zone name or id (required)
-c, --catalog string        Catalog name or id (required)
--fields string             List of field names to return
--format string             Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                  Help for analytics-services
--limit int32               Maximum number of items to return
--offset int32              Offset item number from list to begin return
-o, --org string            Organization name or id (required)
--output string             Write file(s) to directory, instead of STDOUT (default "-")
--scope string              scope
-s, --server string         management server endpoint (required)
--space string              Space name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license        Accept the license for API Connect
--debug                 Enable debug output
--debug-output string   Write debug output to file
--live-help             Enable or disable tracking of limited usage information
-m, --mode string       Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic analytics-services:clear

Clear the Analytics Service objects

### Synopsis

---

Clear the Analytics Service objects

```
apic analytics-services:clear [flags]
```

### Options

---

```
--availability-zone string  Availability Zone name or id (required)
--confirm string            Confirmation for critical updates (required)
--format string             Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                  Help for analytics-services:clear
-o, --org string            Organization name or id (required)
--output string             Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string         management server endpoint (required)
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic analytics-services:create

Create a Analytics Service object

### Synopsis

---

Create a Analytics Service object

```
apic analytics-services:create [flags]
```

### Options

---

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for analytics-services:create
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic analytics-services:delete

Delete the Analytics Service object by name or id

### Synopsis

---

Delete the Analytics Service object by name or id

```
apic analytics-services:delete [flags]
```

### Options

---

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for analytics-services:delete
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic analytics-services:get

Get the Analytics Service object by name or id

### Synopsis

---

Get the Analytics Service object by name or id

```
apic analytics-services:get [flags]
```

### Options

---

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for analytics-services:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>--query string</code>	Add query to request
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic analytics-services:list

List the Analytics Service objects

### Synopsis

---

List the Analytics Service objects

```
apic analytics-services:list [flags]
```

### Options

---

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for analytics-services:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic analytics-services:update

Update the Analytics Service object by name or id

### Synopsis

---

Update the Analytics Service object by name or id

```
apic analytics-services:update [flags]
```

### Options

---

```
--availability-zone string  Availability Zone name or id (required)
--format string             Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                 Help for analytics-services:update
-o, --org string            Organization name or id (required)
--output string             Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string         management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license           Accept the license for API Connect
--debug                   Enable debug output
--debug-output string      Write debug output to file
--live-help               Enable or disable tracking of limited usage information
-m, --mode string          Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic api-keys

Api Keys operations

### Synopsis

---

Api Keys operations

```
apic api-keys [flags]
```

### Options

---

```
--fields string           List of field names to return
--format string           Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help               Help for api-keys
--limit int32             Maximum number of items to return
--offset int32            Offset item number from list to begin return
--output string           Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string       management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license           Accept the license for API Connect
--debug                   Enable debug output
--debug-output string      Write debug output to file
--live-help               Enable or disable tracking of limited usage information
-m, --mode string          Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic api-keys:create

Create a API Key object

## Synopsis

---

Create a API Key object

```
apic api-keys:create [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for api-keys:create
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic api-keys:delete

Delete the API Key object by name or id

## Synopsis

---

Delete the API Key object by name or id

```
apic api-keys:delete [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for api-keys:delete
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic api-keys:get

Get the API Key object by name or id

## Synopsis

---

Get the API Key object by name or id

```
apic api-keys:get [flags]
```

## Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for api-keys:get
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic api-keys:list

List the API Key objects

## Synopsis

---

List the API Key objects

```
apic api-keys:list [flags]
```

## Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for api-keys:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic apis

Apis operations

## Synopsis

---

Apis operations

```
apic apis [flags]
```

## Options

---

<code>--api_type string</code>	The type of api (asynccapi, rest, graphql, wsd1_to_rest, or wsd1)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--expand string</code>	List of transient field to expand
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for apis
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic apis:clone

Apis clone operations

### Synopsis

Apis clone operations

```
apic apis:clone [flags]
```

### Options

<code>--api_type string</code>	The type of api (asynccapi, rest, graphql, wsd1_to_rest, or wsd1)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--expand string</code>	List of transient field to expand
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for apis:clone
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic apis:document

Apis document operations

### Synopsis

Apis document operations

```
apic apis:document [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for apis:document
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output

```
--debug-output string  Write debug output to file
--live-help            Enable or disable tracking of limited usage information
-m, --mode string      Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic apis:get

Apis get operations

### Synopsis

Apis get operations

```
apic apis:get [flags]
```

### Options

```
-c, --catalog string  Catalog name or id (required)
--fields string      List of field names to return (default "add(wsd,api)")
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for apis:get
--id                 id
-o, --org string     Organization name or id (required)
--output string      Write file(s) to directory, use - for STDOUT. (default: cwd)
--scope string       scope
-s, --server string  management server endpoint (required)
--space string       Space name or id (required)
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic apis:list

Apis list operations

### Synopsis

Apis list operations

```
apic apis:list [flags]
```

### Options

```
--api_type string  The type of api (asynccapi, rest, graphql, wsd, to_rest, or wsd)
-c, --catalog string  Catalog name or id (required)
--expand string     List of transient field to expand
--fields string     List of field names to return
--format string     Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help         Help for apis:list
--limit int32      Maximum number of items to return
--offset int32     Offset item number from list to begin return
-o, --org string   Organization name or id (required)
--output string    Write file(s) to directory, instead of STDOUT (default "-")
--scope string     scope
-s, --server string  management server endpoint (required)
--space string     Space name or id (required)
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
```

<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic apis:list-all

Apis list-all operations

### Synopsis

Apis list-all operations

```
apic apis:list-all [flags]
```

### Options

<code>--api_type string</code>	The type of api (asynccapi, rest, graphql, wsd1_to_rest, or wsd1)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--expand string</code>	List of transient field to expand
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for apis:list-all
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic apis:update

Apis update operations

### Synopsis

Apis update operations

```
apic apis:update [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for apis:update
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic apis:wSDL

Apis wSDL operations

### Synopsis

Apis wSDL operations

```
apic apis:wSDL [flags]
```

### Options

-c, --catalog string	Catalog name or id (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for apis:wSDL
--id	id
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, use - for STDOUT. (default: cwd)
--scope string	scope
-s, --server string	management server endpoint (required)
--space string	Space name or id (required)

### Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic apps

Apps operations

### Synopsis

Apps operations

```
apic apps [flags]
```

### Options

-c, --catalog string	Catalog name or id (required)
--consumer-org string	Consumer Organization name or id (required)
--expand string	List of transient field to expand
--fields string	List of field names to return
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for apps
--limit int32	Maximum number of items to return
--offset int32	Offset item number from list to begin return
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
--scope string	scope
-s, --server string	management server endpoint (required)
--space string	Space name or id (required)
--space-initiated	space-initiated

### Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic apps:clear

Clear the Application objects

### Synopsis

Clear the Application objects

```
apic apps:clear [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for apps:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic apps:create

Create a Application object

### Synopsis

Create a Application object

```
apic apps:create [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for apps:create
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic apps:delete

Delete the Application object by name or id

### Synopsis

---

Delete the Application object by name or id

```
apic apps:delete [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for apps:delete
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic apps:get

Get the Application object by name or id

### Synopsis

---

Get the Application object by name or id

```
apic apps:get [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for apps:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic apps:list

List the Application objects

### Synopsis

---

List the Application objects

```
apic apps:list [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--expand string</code>	List of transient field to expand
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for apps:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic apps:update

Update the Application object by name or id

### Synopsis

---

Update the Application object by name or id

```
apic apps:update [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for apps:update
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic associates

Associates operations

### Synopsis

---

Associates operations

```
apic associates [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for associates
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic associates:get

Associates get operations

### Synopsis

---

Associates get operations

```
apic associates:get [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for associates:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic associates:list

Associates list operations

### Synopsis

---

Associates list operations

```
apic associates:list [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for associates:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic availability-zones

Availability Zones operations

### Synopsis

---

Availability Zones operations

```
apic availability-zones [flags]
```

### Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for availability-zones
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic availability-zones:clear

Clear the Availability Zone objects

## Synopsis

---

Clear the Availability Zone objects

```
apic availability-zones:clear [flags]
```

## Options

---

<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for availability-zones:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic availability-zones:create

Create a Availability Zone object

## Synopsis

---

Create a Availability Zone object

```
apic availability-zones:create [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for availability-zones:create
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic availability-zones:delete

Delete the Availability Zone object by name or id

## Synopsis

---

Delete the Availability Zone object by name or id

```
apic availability-zones:delete [flags]
```

## Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for availability-zones:delete
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic availability-zones:get

Get the Availability Zone object by name or id

### Synopsis

---

Get the Availability Zone object by name or id

```
apic availability-zones:get [flags]
```

### Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for availability-zones:get
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic availability-zones:list

List the Availability Zone objects

### Synopsis

---

List the Availability Zone objects

```
apic availability-zones:list [flags]
```

### Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for availability-zones:list
--limit int32    Maximum number of items to return
--offset int32   Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic availability-zones:update

Update the Availability Zone object by name or id

### Synopsis

Update the Availability Zone object by name or id

```
apic availability-zones:update [flags]
```

### Options

```
--format string    Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help         Help for availability-zones:update
-o, --org string   Organization name or id (required)
--output string    Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic billings

Billings operations

### Synopsis

Billings operations

```
apic billings [flags]
```

### Options

```
--fields string    List of field names to return
--format string    Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help         Help for billings
--limit int32      Maximum number of items to return
--offset int32     Offset item number from list to begin return
-o, --org string   Organization name or id (required)
--output string    Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic billings:clear

Clear the Billing objects

### Synopsis

---

Clear the Billing objects

```
apic billings:clear [flags]
```

### Options

---

<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for billings:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic billings:delete

Delete the Billing object by name or id

### Synopsis

---

Delete the Billing object by name or id

```
apic billings:delete [flags]
```

### Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for billings:delete
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic billings:get

Get the Billing object by name or id

## Synopsis

---

Get the Billing object by name or id

```
apic billings:get [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for billings:get
-o, --org string  Organization name or id (required)
--output string  Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic billings:list

List the Billing objects

## Synopsis

---

List the Billing objects

```
apic billings:list [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for billings:list
--limit int32    Maximum number of items to return
--offset int32   Offset item number from list to begin return
-o, --org string  Organization name or id (required)
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic billings:update

Update the Billing object by name or id

## Synopsis

---

Update the Billing object by name or id

```
apic billings:update [flags]
```

## Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for billings:update
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic catalog-settings

Catalog Settings operations

### Synopsis

---

Catalog Settings operations

```
apic catalog-settings [flags]
```

### Options

---

```
-h, --help  Help for catalog-settings
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic catalog-settings:get

Get the Catalog Setting object

### Synopsis

---

Get the Catalog Setting object

```
apic catalog-settings:get [flags]
```

### Options

---

```
-c, --catalog string  Catalog name or id (required)
--fields string      List of field names to return
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for catalog-settings:get
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string  management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic catalog-settings:update

Update the Catalog Setting object

### Synopsis

Update the Catalog Setting object

```
apic catalog-settings:update [flags]
```

### Options

```
-c, --catalog string  Catalog name or id (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for catalog-settings:update
-o, --org string      Organization name or id (required)
--output string       Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string   management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic catalogs

Catalogs operations

### Synopsis

Catalogs operations

```
apic catalogs [flags]
```

### Options

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for catalogs
--limit int32    Maximum number of items to return
--my            my
--offset int32   Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic catalogs:clear

Clear the Catalog objects

### Synopsis

---

Clear the Catalog objects

```
apic catalogs:clear [flags]
```

### Options

---

```
--confirm string  Confirmation for critical updates (required)
--format string   Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help        Help for catalogs:clear
-o, --org string   Organization name or id (required)
--output string   Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic catalogs:create

Create a Catalog object

### Synopsis

---

Create a Catalog object

```
apic catalogs:create [flags]
```

### Options

---

```
--format string   Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help        Help for catalogs:create
-o, --org string   Organization name or id (required)
--output string   Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic catalogs:delete

Delete the Catalog object by name or id

### Synopsis

---

Delete the Catalog object by name or id

```
apic catalogs:delete [flags]
```

## Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.  
-h, --help      Help for catalogs:delete  
-o, --org string Organization name or id (required)  
--output string Write file(s) to directory, instead of STDOUT (default "-")  
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect  
--debug           Enable debug output  
--debug-output string Write debug output to file  
--live-help       Enable or disable tracking of limited usage information  
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic catalogs:email-to-owners

Send email to owners of consumer organizations

## Synopsis

---

Send email to owners of consumer organizations, given consumer org and consumer group urls. For consumer group, email owners of all consumer orgs in the group.

```
apic catalogs:email-to-owners [flags]
```

## Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.  
-h, --help      Help for catalogs:email-to-owners  
-o, --org string Organization name or id (required)  
--output string Write file(s) to directory, instead of STDOUT (default "-")  
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect  
--debug           Enable debug output  
--debug-output string Write debug output to file  
--live-help       Enable or disable tracking of limited usage information  
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic catalogs:get

Get the Catalog object by name or id

## Synopsis

---

Get the Catalog object by name or id

```
apic catalogs:get [flags]
```

## Options

---

```
--fields string  List of field names to return  
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.  
-h, --help      Help for catalogs:get  
-o, --org string Organization name or id (required)  
--output string Write file(s) to directory, use - for STDOUT. (default: cwd)  
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic catalogs:list

List the Catalog objects

## Synopsis

---

List the Catalog objects

```
apic catalogs:list [flags]
```

## Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for catalogs:list
<code>--limit int32</code>	Maximum number of items to return
<code>--my</code>	my
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic catalogs:transfer-owner

Transfer owner to an associate

## Synopsis

---

Transfer owner to an associate

```
apic catalogs:transfer-owner [flags]
```

## Options

---

<code>--cascade</code>	Cascade the behavior
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for catalogs:transfer-owner
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic catalogs:update

Update the Catalog object by name or id

### Synopsis

---

Update the Catalog object by name or id

```
apic catalogs:update [flags]
```

### Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for catalogs:update
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic client-creds

Manage the client configuration parameters. Client ID and Client Secret.

### Synopsis

---

Manage the client configuration parameters. Client ID and Client Secret.

```
apic client-creds [flags]
```

### Options

---

<code>-g, --global</code>	list the global configuration variables
<code>-h, --help</code>	Help for client-creds
<code>-l, --local</code>	list the local application configuration variables

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic client-creds:clear

clear the set client credentials.

## Synopsis

---

clear the set client credentials.

```
apic client-creds:clear [flags]
```

## Examples

---

```
$ apic client-creds:clear
Deleted client credentials.
```

## Options

---

```
-g, --global  list the global configuration variables
-h, --help    Help for client-creds:clear
-l, --local   list the local application configuration variables
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic client-creds:list

List the set clientID/secret parameters.

## Synopsis

---

List the set clientID/secret parameters.

```
apic client-creds:list [flags]
```

## Examples

---

```
$ apic client-creds:list
```

## Options

---

```
-g, --global  list the global configuration variables
-h, --help    Help for client-creds:list
-l, --local   list the local application configuration variables
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic client-creds:set

Set the client configuration parameters. ClientID and Client Secret.

## Synopsis

---

Set the client configuration parameters. ClientID and Client Secret.

```
apic client-creds:set /path/to/creds/json ... [flags]
```

## Examples

---

```
$ apic client-creds:set /Users/local_user/credential.json
```

## Options

---

```
-g, --global    list the global configuration variables
-h, --help      Help for client-creds:set
-l, --local     list the local application configuration variables
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic cloud-emails

Cloud Emails operations

## Synopsis

---

Cloud Emails operations

```
apic cloud-emails [flags]
```

## Options

---

```
-h, --help  Help for cloud-emails
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic cloud-emails:send-to-owners

Email provider org owners

## Synopsis

---

Send an email to owners of provider orgs

```
apic cloud-emails:send-to-owners [flags]
```

## Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for cloud-emails:send-to-owners
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
```

<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic cloud-settings

Cloud Settings operations

### Synopsis

---

Cloud Settings operations

```
apic cloud-settings [flags]
```

### Options

---

<code>-h, --help</code>	Help for cloud-settings
-------------------------	-------------------------

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic cloud-settings:about

Return information about the cloud

### Synopsis

---

Return public information about the cloud. You MUST supply the `--format` option when using this command from the API Connect toolkit.

```
apic cloud-settings:about [flags]
```

### Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for cloud-settings:about
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic cloud-settings:audit-endpoint-test-connection

Test an audit endpoint connection

## Synopsis

---

Test an audit endpoint connection

```
apic cloud-settings:audit-endpoint-test-connection [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for cloud-settings:audit-endpoint-test-connection
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic cloud-settings:designer-credentials-list

List credential for designer

## Synopsis

---

List credential for designer

```
apic cloud-settings:designer-credentials-list [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for cloud-settings:designer-credentials-list
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic cloud-settings:get

Get the Cloud Setting object

## Synopsis

---

Get the Cloud Setting object

```
apic cloud-settings:get [flags]
```

## Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for cloud-settings:get
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic cloud-settings:info

Return public information about the cloud deployment

## Synopsis

---

Return public information about the cloud deployment

```
apic cloud-settings:info [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for cloud-settings:info
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic cloud-settings:mail-server-configured

Return true or false based on if mail server is configured or not

## Synopsis

---

Return true or false based on if mail server is configured or not. You MUST supply the --format option when using this command from the API Connect toolkit.

```
apic cloud-settings:mail-server-configured [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for cloud-settings:mail-server-configured
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic cloud-settings:oauth2-certs

Support JWKS\_URI endpoint, conform to OIDC specification

### Synopsis

---

Return JWKS that is used to issue token. You MUST supply the --format option when using this command from the API Connect toolkit.

```
apic cloud-settings:oauth2-certs [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for cloud-settings:oauth2-certs
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic cloud-settings:toolkit-credentials-list

List credential for toolkit and consumer toolkit

### Synopsis

---

List credential for toolkit and consumer toolkit

```
apic cloud-settings:toolkit-credentials-list [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for cloud-settings:toolkit-credentials-list
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic cloud-settings:topology

Return the topology of the cloud for governance

### Synopsis

---

Return the topology of the cloud for governance. You MUST supply the --format option when using this command from the API Connect toolkit.

```
apic cloud-settings:topology [flags]
```

## Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for cloud-settings:topology
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic cloud-settings:update

Update the Cloud Setting object

## Synopsis

---

Update the Cloud Setting object

```
apic cloud-settings:update [flags]
```

## Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for cloud-settings:update
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic config

Manage configuration variables

## Synopsis

---

Manage configuration variables

```
apic config [flags]
```

## Options

---

```
-g, --global  list the global configuration variables
-h, --help    Help for config
-l, --local   list the local application configuration variables
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic config:clear

Delete all configuration variables

### Synopsis

---

Delete all configuration variables

```
apic config:clear [flags]
```

### Examples

---

```
$ apic config:clear
Deleted config catalog
Deleted config org
Deleted config space

$ apic config:clear --global
Deleted config catalog
```

### Options

---

```
-g, --global list the global configuration variables
-h, --help  Help for config:clear
-l, --local list the local application configuration variables
```

### Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug          Enable debug output
--debug-output string Write debug output to file
--live-help      Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic config:delete

Delete a configuration variable

### Synopsis

---

Configuration variables:

**catalog** The catalog configuration variable should be set to the URI of an API Connect catalog. The value of the catalog provides the default identity of a catalog for all the commands that are used to manage aspects of a catalog. The default values defined by the catalog's URI can be overridden using the `--server`, `--organization`, and `--catalog` command line options. The catalog URI has the form: `https://MANAGEMENT_SERVER/api/catalogs/ORGANIZATION_NAME/CATALOG_NAME`

**org** The default value of `org` defined by the app's or catalog's URI can be set using the `org` URI. The `org` URI has the form: `https://MANAGEMENT_SERVER/api/orgs/ORGANIZATION_NAME`

**space** The space configuration variable should be set to the URI of an API Connect space. The value of the space provides the default identity of a space for all the commands that are used to manage aspects of a space. The default values defined by the spaces's URI can be overridden using the `--server`, `--organization`, `--catalog`, and `--space` command line options. The space URI has the form: `https://MANAGEMENT_SERVER/api/spaces/ORGANIZATION_NAME/CATALOG_NAME/SPACE_NAME`

**consumer** The consumer configuration variable should be set to the URI of an API Connect consumer. The value of the `consumer-org` provides the default identity of a consumer. The default values defined by the consumer URI can be overridden using the `--server`, `--organization`, `--catalog`, and `--consumer` command line options. The consumer URI has the form: `https://MANAGEMENT_SERVER/api/consumer-orgs/ORGANIZATION_NAME/CATALOG_NAME/CONSUMER_ORG_NAME`

**cloud** The cloud configuration variable should be set to the management server URI. The value of the cloud variable provides default server URI for cloud admin commands. It can be overridden using the `--server` and `--mode` command line options. The cloud URI has the form: `https://MANAGEMENT_SERVER/api/`

**mode** The value of mode configuration variable defines the toolkit operation mode. It can be overridden using the `--mode` command line option. The value can be set to `apim` or `consumer`

**template-path** List of places to look for handlebar templates

template-default-api Defines the default api template

template-default-product Defines the default product template

```
apic config:delete NAME... [flags]
```

## Examples

```
$ apic config:delete catalog
Deleted config catalog
```

```
$ apic config:delete org
Deleted config org
```

```
$ apic config:delete template-path
Deleted config template-path
```

## Options

```
-g, --global list the global configuration variables
-h, --help   Help for config:delete
-l, --local  list the local application configuration variables
```

## Options inherited from parent commands

```
--accept-license Accept the license for API Connect
--debug          Enable debug output
--debug-output string Write debug output to file
--live-help      Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic config:get

Get a configuration variable

## Synopsis

Configuration variables:

**catalog** The catalog configuration variable should be set to the URI of an API Connect catalog. The value of the catalog provides the default identity of a catalog for all the commands that are used to manage aspects of a catalog. The default values defined by the catalog's URI can be overridden using the --server, --organization, and --catalog command line options. The catalog URI has the form: `https://MANAGEMENT_SERVER/api/catalogs/ORGANIZATION_NAME/CATALOG_NAME`

**org** The default value of org defined by the app's or catalog's URI can be set using the org URI. The org URI has the form: `https://MANAGEMENT_SERVER/api/orgs/ORGANIZATION_NAME`

**space** The space configuration variable should be set to the URI of an API Connect space. The value of the space provides the default identity of a space for all the commands that are used to manage aspects of a space. The default values defined by the spaces's URI can be overridden using the --server, --organization, --catalog, and --space command line options. The space URI has the form: `https://MANAGEMENT_SERVER/api/spaces/ORGANIZATION_NAME/CATALOG_NAME/SPACE_NAME`

**consumer** The consumer configuration variable should be set to the URI of an API Connect consumer. The value of the consumer-org provides the default identity of a consumer. The default values defined by the consumer URI can be overridden using the --server, --organization, --catalog, and --consumer command line options. The consumer URI has the form: `https://MANAGEMENT_SERVER/api/consumer-orgs/ORGANIZATION_NAME/CATALOG_NAME/CONSUMER_ORG_NAME`

**cloud** The cloud configuration variable should be set to the management server URI. The value of the cloud variable provides default server URI for cloud admin commands. It can be overridden using the --server and --mode command line options. The cloud URI has the form: `https://MANAGEMENT_SERVER/api/`

**mode** The value of mode configuration variable defines the toolkit operation mode. It can be overridden using the --mode command line option. The value can be set to apim or consumer

**template-path** List of places to look for handlebar templates

**template-default-api** Defines the default api template

**template-default-product** Defines the default product template

```
apic config:get NAME [flags]
```

## Examples

```
$ apic config:get catalog
catalog: https://mgmthost.com/api/catalogs/climbon/sb
```

```
$ apic config:get org
org: https://mgmthost.com/api/orgs/climbon
```

```
$ apic config:get template-path
template-path: /etc/templates
```

## Options

---

```
-g, --global  list the global configuration variables
-h, --help    Help for config:get
-l, --local   list the local application configuration variables
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic config:list

List the application and global configuration variables

## Synopsis

---

Configuration variables:

**catalog** The catalog configuration variable should be set to the URI of an API Connect catalog. The value of the catalog provides the default identity of a catalog for all the commands that are used to manage aspects of a catalog. The default values defined by the catalog's URI can be overridden using the `--server`, `--organization`, and `--catalog` command line options. The catalog URI has the form: `https://MANAGEMENT_SERVER/api/catalogs/ORGANIZATION_NAME/CATALOG_NAME`

**org** The default value of org defined by the app's or catalog's URI can be set using the org URI. The org URI has the form: `https://MANAGEMENT_SERVER/api/orgs/ORGANIZATION_NAME`

**space** The space configuration variable should be set to the URI of an API Connect space. The value of the space provides the default identity of a space for all the commands that are used to manage aspects of a space. The default values defined by the spaces's URI can be overridden using the `--server`, `--organization`, `--catalog`, and `--space` command line options. The space URI has the form: `https://MANAGEMENT_SERVER/api/spaces/ORGANIZATION_NAME/CATALOG_NAME/SPACE_NAME`

**consumer** The consumer configuration variable should be set to the URI of an API Connect consumer. The value of the consumer-org provides the default identity of a consumer. The default values defined by the consumer URI can be overridden using the `--server`, `--organization`, `--catalog`, and `--consumer` command line options. The consumer URI has the form: `https://MANAGEMENT_SERVER/api/consumer-orgs/ORGANIZATION_NAME/CATALOG_NAME/CONSUMER_ORG_NAME`

**cloud** The cloud configuration variable should be set to the management server URI. The value of the cloud variable provides default server URI for cloud admin commands. It can be overridden using the `--server` and `--mode` command line options. The cloud URI has the form: `https://MANAGEMENT_SERVER/api/`

**mode** The value of mode configuration variable defines the toolkit operation mode. It can be overridden using the `--mode` command line option. The value can be set to `apim` or `consumer`

**template-path** List of places to look for handlebar templates

**template-default-api** Defines the default api template

**template-default-product** Defines the default product template

**apic config:list** [flags]

## Examples

---

```
$ apic config
catalog: https://mgmthost.com/api/catalogs/climbon/sb
org: https://mgmthost.com/api/orgs/climbon
```

```
$ apic config --global
catalog: https://mgmthost.com/api/catlogs/climbon/sb
```

## Options

---

```
-g, --global  list the global configuration variables
-h, --help    Help for config:list
-l, --local   list the local application configuration variables
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
```

```
--debug-output string  Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic config:set

Set or update configuration variables

### Synopsis

---

Configuration variables:

**catalog** The catalog configuration variable should be set to the URI of an API Connect catalog. The value of the catalog provides the default identity of a catalog for all the commands that are used to manage aspects of a catalog. The default values defined by the catalog's URI can be overridden using the `--server`, `--organization`, and `--catalog` command line options. The catalog URI has the form: `https://MANAGEMENT_SERVER/api/catalogs/ORGANIZATION_NAME/CATALOG_NAME`

**org** The default value of `org` defined by the app's or catalog's URI can be set using the `org` URI. The `org` URI has the form: `https://MANAGEMENT_SERVER/api/orgs/ORGANIZATION_NAME`

**space** The space configuration variable should be set to the URI of an API Connect space. The value of the space provides the default identity of a space for all the commands that are used to manage aspects of a space. The default values defined by the spaces's URI can be overridden using the `--server`, `--organization`, `--catalog`, and `--space` command line options. The space URI has the form: `https://MANAGEMENT_SERVER/api/spaces/ORGANIZATION_NAME/CATALOG_NAME/SPACE_NAME`

**consumer** The consumer configuration variable should be set to the URI of an API Connect consumer. The value of the consumer-`org` provides the default identity of a consumer. The default values defined by the consumer URI can be overridden using the `--server`, `--organization`, `--catalog`, and `--consumer` command line options. The consumer URI has the form: `https://MANAGEMENT_SERVER/api/consumer-orgs/ORGANIZATION_NAME/CATALOG_NAME/CONSUMER_ORG_NAME`

**cloud** The cloud configuration variable should be set to the management server URI. The value of the cloud variable provides default server URI for cloud admin commands. It can be overridden using the `--server` and `--mode` command line options. The cloud URI has the form: `https://MANAGEMENT_SERVER/api/`

**mode** The value of `mode` configuration variable defines the toolkit operation mode. It can be overridden using the `--mode` command line option. The value can be set to `apim` or `consumer`

**template-path** List of places to look for handlebar templates

**template-default-api** Defines the default api template

**template-default-product** Defines the default product template

**apic config:set** NAME=VALUE ... [flags]

### Examples

---

```
$ apic config:set catalog=https://mgmthost.com/api/catalogs/climbson/sb
catalog: https://mgmthost.com/api/catalogs/climbson/sb
```

```
$ apic config:set org=https://mgmthost2.com/api/orgs/hikeon
org: https://mgmthost2.com/api/orgs/hikeon
```

```
$ apic config:set --global template-path="/etc/templates"
template-path: /etc/templates
```

### Options

---

```
-g, --global  list the global configuration variables
-h, --help    Help for config:set
-l, --local   list the local application configuration variables
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string  Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic configured-api-user-registries

## Synopsis

---

Configured Api User Registries operations

```
apic configured-api-user-registries [flags]
```

## Options

---

```
-c, --catalog string    Catalog name or id (required)
--fields string        List of field names to return
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for configured-api-user-registries
--limit int32          Maximum number of items to return
--offset int32         Offset item number from list to begin return
-o, --org string        Organization name or id (required)
--output string        Write file(s) to directory, instead of STDOUT (default "-")
--scope string         scope
-s, --server string    management server endpoint (required)
--space string         Space name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic configured-billings

Configured Billings operations

### Synopsis

---

Configured Billings operations

```
apic configured-billings [flags]
```

## Options

---

-c, --catalog string	Catalog name or id (required)
--fields string	List of field names to return
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for configured-billings
--limit int32	Maximum number of items to return
--offset int32	Offset item number from list to begin return
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string	management server endpoint (required)

## Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic configured-billings:clear

Clear the Configured Billing objects

### Synopsis

Clear the Configured Billing objects

```
apic configured-billings:clear [flags]
```

### Options

-c, --catalog string	Catalog name or id (required)
--confirm string	Confirmation for critical updates (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for configured-billings:clear
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string	management server endpoint (required)

## Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic configured-billings:create

Create a Configured Billing object

### Synopsis

Create a Configured Billing object

```
apic configured-billings:create [flags]
```

### Options

-c, --catalog string	Catalog name or id (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for configured-billings:create
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic configured-billings:delete

Delete the Configured Billing object by name or id

### Synopsis

---

Delete the Configured Billing object by name or id

```
apic configured-billings:delete [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for configured-billings:delete
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic configured-billings:get

Get the Configured Billing object by name or id

### Synopsis

---

Get the Configured Billing object by name or id

```
apic configured-billings:get [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for configured-billings:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic configured-billings:list

List the Configured Billing objects

### Synopsis

List the Configured Billing objects

```
apic configured-billings:list [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for configured-billings:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic configured-gateway-services

Configured Gateway Services operations

### Synopsis

Configured Gateway Services operations

```
apic configured-gateway-services [flags]
```

### Options

```

-c, --catalog string      Catalog name or id (required)
--fields string          List of field names to return
--format string          Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                Help for configured-gateway-services
--limit int32            Maximum number of items to return
--offset int32           Offset item number from list to begin return
-o, --org string          Organization name or id (required)
--output string           Write file(s) to directory, instead of STDOUT (default "-")
--scope string            scope
-s, --server string       management server endpoint (required)
--space string            Space name or id (required)

```

## Options inherited from parent commands

```

--accept-license         Accept the license for API Connect
--debug                  Enable debug output
--debug-output string    Write debug output to file
--live-help              Enable or disable tracking of limited usage information
-m, --mode string        Toolkit operation mode (default "apim")

```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic configured-gateway-services:clear

Configured Gateway Services clear operations

### Synopsis

Configured Gateway Services clear operations

```
apic configured-gateway-services:clear [flags]
```

### Options

```

-c, --catalog string      Catalog name or id (required)
--confirm string          Confirmation for critical updates (required)
--format string          Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                Help for configured-gateway-services:clear
-o, --org string          Organization name or id (required)
--output string           Write file(s) to directory, instead of STDOUT (default "-")
--scope string            scope

```

```
-s, --server string      management server endpoint (required)
--space string          Space name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic configured-gateway-services:create

Configured Gateway Services create operations

### Synopsis

---

Configured Gateway Services create operations

```
apic configured-gateway-services:create [flags]
```

### Options

---

```
-c, --catalog string      Catalog name or id (required)
--format string           Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                Help for configured-gateway-services:create
-o, --org string           Organization name or id (required)
--output string           Write file(s) to directory, instead of STDOUT (default "-")
--scope string            scope
-s, --server string       management server endpoint (required)
--space string            Space name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic configured-gateway-services:delete

Configured Gateway Services delete operations

### Synopsis

---

Configured Gateway Services delete operations

```
apic configured-gateway-services:delete [flags]
```

### Options

---

```
-c, --catalog string      Catalog name or id (required)
--format string           Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                Help for configured-gateway-services:delete
-o, --org string           Organization name or id (required)
--output string           Write file(s) to directory, instead of STDOUT (default "-")
--scope string            scope
-s, --server string       management server endpoint (required)
--space string            Space name or id (required)
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic configured-gateway-services:get

Configured Gateway Services get operations

### Synopsis

Configured Gateway Services get operations

```
apic configured-gateway-services:get [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for configured-gateway-services:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic configured-gateway-services:list

Configured Gateway Services list operations

### Synopsis

Configured Gateway Services list operations

```
apic configured-gateway-services:list [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for configured-gateway-services:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file

<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic configured-oauth-providers

Configured OAuth Providers operations

### Synopsis

Configured OAuth Providers operations

```
apic configured-oauth-providers [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for configured-oauth-providers
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic configured-oauth-providers:clear

Configured OAuth Providers clear operations

### Synopsis

Configured OAuth Providers clear operations

```
apic configured-oauth-providers:clear [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for configured-oauth-providers:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic configured-oauth-providers:create

Configured OAuth Providers create operations

### Synopsis

Configured OAuth Providers create operations

```
apic configured-oauth-providers:create [flags]
```

### Options

```
-c, --catalog string  Catalog name or id (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for configured-oauth-providers:create
-o, --org string     Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--space string       Space name or id (required)
```

### Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

--offset int32         Offset item number from list to begin return
-o, --org string        Organization name or id (required)
--output string        Write file(s) to directory, instead of STDOUT (default "-")
--scope string         scope
-s, --server string    management server endpoint (required)
--space string         Space name or id (required)

```

## Options inherited from parent commands

```

--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")

```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic configured-tls-client-profiles:list-all

Configured Tls Client Profiles list-all operations

### Synopsis

Configured Tls Client Profiles list-all operations

```
apic configured-tls-client-profiles:list-all [flags]
```

### Options

```

-c, --catalog string    Catalog name or id (required)
--fields string        List of field names to return
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help              Help for configured-tls-client-profiles:list-all
--limit int32          Maximum number of items to return
--offset int32         Offset item number from list to begin return
-o, --org string        Organization name or id (required)
--output string        Write file(s) to directory, instead of STDOUT (default "-")
--scope string         scope
-s, --server string    management server endpoint (required)
--space string         Space name or id (required)

```

## Options inherited from parent commands

```

--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")

```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic consumer-org-settings

Consumer Org Settings operations

### Synopsis

Consumer Org Settings operations

```
apic consumer-org-settings [flags]
```

### Options

```
-h, --help Help for consumer-org-settings
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic consumer-org-settings:delete

Delete the Consumer Organization Setting object

### Synopsis

---

Delete the Consumer Organization Setting object

```
apic consumer-org-settings:delete [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for consumer-org-settings:delete
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic consumer-org-settings:get

Get the Consumer Organization Setting object

### Synopsis

---

Get the Consumer Organization Setting object

```
apic consumer-org-settings:get [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for consumer-org-settings:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic consumer-org-settings:update

Update the Consumer Organization Setting object

### Synopsis

Update the Consumer Organization Setting object

```
apic consumer-org-settings:update [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for consumer-org-settings:update
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic consumer-orgs

Consumer Orgs operations

### Synopsis

Consumer Orgs operations

```
apic consumer-orgs [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--expand string</code>	List of transient field to expand
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for consumer-orgs
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file

<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic consumer-orgs:clear

Clear the Consumer Organization objects

### Synopsis

Clear the Consumer Organization objects

```
apic consumer-orgs:clear [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for consumer-orgs:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic consumer-orgs:create

Create a Consumer Organization object

### Synopsis

Create a Consumer Organization object

```
apic consumer-orgs:create [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for consumer-orgs:create
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic consumer-orgs:delete

Delete the Consumer Organization object by name or id

### Synopsis

---

Delete the Consumer Organization object by name or id

```
apic consumer-orgs:delete [flags]
```

### Options

---

```
-c, --catalog string      Catalog name or id (required)
--format string          Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help               Help for consumer-orgs:delete
-o, --org string         Organization name or id (required)
--output string         Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string      management server endpoint (required)
--space string          Space name or id (required)
--space-initiated       space-initiated
```

### Options inherited from parent commands

---

```
--accept-license        Accept the license for API Connect
--debug                 Enable debug output
--debug-output string   Write debug output to file
--live-help             Enable or disable tracking of limited usage information
-m, --mode string       Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic consumer-orgs:get

Get the Consumer Organization object by name or id

### Synopsis

---

Get the Consumer Organization object by name or id

```
apic consumer-orgs:get [flags]
```

### Options

---

```
-c, --catalog string      Catalog name or id (required)
--fields string          List of field names to return
--format string          Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help               Help for consumer-orgs:get
-o, --org string         Organization name or id (required)
--output string         Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string      management server endpoint (required)
--space string          Space name or id (required)
--space-initiated       space-initiated
```

### Options inherited from parent commands

---

```
--accept-license        Accept the license for API Connect
--debug                 Enable debug output
--debug-output string   Write debug output to file
--live-help             Enable or disable tracking of limited usage information
-m, --mode string       Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic consumer-orgs:list

List the Consumer Organization objects

### Synopsis

---

List the Consumer Organization objects

```
apic consumer-orgs:list [flags]
```

### Options

---

```
-c, --catalog string    Catalog name or id (required)
--expand string        List of transient field to expand
--fields string        List of field names to return
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help              Help for consumer-orgs:list
--limit int32          Maximum number of items to return
--offset int32         Offset item number from list to begin return
-o, --org string        Organization name or id (required)
--output string        Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string    management server endpoint (required)
--space string         Space name or id (required)
--space-initiated     space-initiated
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic consumer-orgs:transfer-owner

Transfer owner to an associate

### Synopsis

---

Transfer owner to an associate

```
apic consumer-orgs:transfer-owner [flags]
```

### Options

---

```
--cascade             Cascade the behavior
-c, --catalog string  Catalog name or id (required)
--format string       Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help            Help for consumer-orgs:transfer-owner
-o, --org string      Organization name or id (required)
--output string       Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string   management server endpoint (required)
--space string        Space name or id (required)
--space-initiated     space-initiated
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic consumer-orgs:update

1800 IBM API Connect 10.0.2.0 to 10.0.4.x

Update the Consumer Organization object by name or id

## Synopsis

---

Update the Consumer Organization object by name or id

```
apic consumer-orgs:update [flags]
```

## Options

---

```
-c, --catalog string    Catalog name or id (required)
--fields string        List of field names to return
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for consumer-orgs:update
-o, --org string        Organization name or id (required)
--output string        Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string    management server endpoint (required)
--space string         Space name or id (required)
--space-initiated     space-initiated
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic create

Create an API or product definition

## Synopsis

---

Create an API or product definition

```
apic create [flags]
```

## Options

---

```
-h, --help           Help for create
-i, --interactive    use interactive mode
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic create:api

Create an OpenAPI (Swagger) definition

## Synopsis

---

Create an OpenAPI (Swagger) definition

```
apic create:api [flags]
```

## Examples

---

```

Create an API
$ apic create:api --title Routes
Created routes.yaml API definition [routes:1.0.0]

Create an API and generate a product referencing the API
$ apic create:api --title Routes --product "Climb On"
Created routes.yaml API definition [routes:1.0.0]
Created climb-on.yaml product definition [climb-on:1.0.0]

Create an API interactively
$ apic create:api
Title: Routes
Name (routes): routes
File (routes.yaml): routes.yaml
Template: ()
Basepath (/routes): /routes
Hostname ($(catalog.host)): $(catalog.host)
Schemes:
Target url: ()
Create product [true]: true
Product title (Routes Product): Climb On
Product name (climb-on): climb-on
Product file (climb-on.yaml): climb-on.yaml
Created routes.yaml API definition [routes:1.0.0]
Created climb-on.yaml product definition [climb-on:1.0.0]

Create an API from a WSDL document
$ apic create:api --wsdl globalweather.wsdl
Created globalweather.yaml API definition [globalweather.yaml:1.0.0]

Create an API using APIC's default OAuth 2 provider template
$ apic create:api --title "OAuth2 Provider" --template oauth2
Created oauth2-provider.yaml API definition [oauth2-provider:1.0.0]

Create an API using one of your templates
$ apic config:set --global template-path="/etc/templates"
$ ls /etc/templates
proxy.hbs staging.hbs
$ apic create:api --title "Proxy Provider" --template proxy
Created proxy-provider.yaml API definition [proxy-provider:1.0.0]

Create an API using your default template
$ apic config:set --global template-path="/etc/templates"
$ ls /etc/templates
proxy.hbs staging.hbs
$ apic config:set --global template-default-api=staging
$ apic create:api --title "Staging Provider"
Created staging-provider.yaml API definition [staging-provider:1.0.0]

```

## Options

```

--api_type string      The type of api (rest, wsdl-to-rest, or wsdl) (default "wsdl")
--basepath string      basepath value (default derived from name)
--disable_ws security  Disable generation of WS-Security definitions in api
--filename string      filename (default derived from name)
--gateway-type string  The type of the gateway (datapower-gateway, datapower-api-gateway, event-gateway) (default
"datapower-gateway")
-h, --help            Help for create:api
--hostname string     host value (default $(catalog.host))
-i, --interactive     use interactive mode
--name string         x-ibm-name value (default derived from title)
--product string      generate a product definition referencing the API
--schemes string      list of schemes (valid options are http, https, ws and wss)
--services string     service names separated by space
--target-url string   target url
--template string     use a provider template (if empty defaults to apic template)
--title string        title value (required)
-v, --version string  version value (default "1.0.0")
--wsdl string         wsdl file to use as the source (required authentication via apic login)

```

## Options inherited from parent commands

```

--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")

```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic create:product

Create a product definition

## Synopsis

Create a product definition

```
apic create:product [flags]
```

## Examples

```
Create a product
$ apic create:product --title "Climb On"
Created climb-on.yaml product definition [climb-on:1.0.0]
Create a product interactively
$ apic create:product
? Title: Climb On
? Name: climb-on
? File: climb-on.yaml
? Template:
? API Files:
Created climb-on.yaml product definition [climb-on:1.0.0]
Create a product referencing existing APIs
$ apic create:product --title "Climb On" --apis "routes.yaml ascents.yaml"
Created climb-on.yaml product definition [climb-on:1.0.0]
Create an product using one of your templates
$ apic config:set --global template-path="/etc/templates"
$ ls /etc/templates
proxy-product.hbs staging-product.hbs
$ apic create:product --title "Proxy Product" --template proxy
Created proxy-product.yaml product definition [proxy-product:1.0.0]
Create a product using your default template
$ apic config:set --global template-path="/etc/templates"
$ ls /etc/templates
proxy-product.hbs staging-product.hbs
$ apic config:set --global template-default-product=staging
$ apic create:product --title "Staging Product"
Created staging-product.yaml product definition [staging-product:1.0.0]
```

## Options

--apis string	api file names separated by a space
--filename string	filename (default derived from name)
--gateway-type string	The type of the gateway (datapower-gateway, datapower-api-gateway, event-gateway) (default "datapower-gateway")
-h, --help	Help for create:product
-i, --interactive	use interactive mode
--name string	x-ibm-name value (default derived from title)
--template string	use a provider template (if empty defaults to apic template)
--title string	title value (required)
-v, --version string	version value (default "1.0.0")

## Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic credentials

Credentials operations

## Synopsis

Credentials operations

```
apic credentials [flags]
```

## Options

-a, --app string	Application name or id (required)
-c, --catalog string	Catalog name or id (required)
--consumer-org string	Consumer Organization name or id (required)
--fields string	List of field names to return
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for credentials
--limit int32	Maximum number of items to return
--offset int32	Offset item number from list to begin return

-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
--scope string	scope
-s, --server string	management server endpoint (required)
--space string	Space name or id (required)
--space-initiated	space-initiated

## Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic credentials:clear

Credentials clear operations

### Synopsis

Credentials clear operations

```
apic credentials:clear [flags]
```

### Options

-a, --app string	Application name or id (required)
-c, --catalog string	Catalog name or id (required)
--confirm string	Confirmation for critical updates (required)
--consumer-org string	Consumer Organization name or id (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for credentials:clear
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string	management server endpoint (required)
--space string	Space name or id (required)
--space-initiated	space-initiated

## Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic credentials:create

Create a Application Credential object

### Synopsis

Create a Application Credential object

```
apic credentials:create [flags]
```

### Options

-a, --app string	Application name or id (required)
-c, --catalog string	Catalog name or id (required)
--consumer-org string	Consumer Organization name or id (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for credentials:create
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")

-s, --server string	management server endpoint (required)
--space string	Space name or id (required)
--space-initiated	space-initiated

## Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic credentials:delete

Delete the Application Credential object by name or id

### Synopsis

Delete the Application Credential object by name or id

```
apic credentials:delete [flags]
```

### Options

-a, --app string	Application name or id (required)
-c, --catalog string	Catalog name or id (required)
--consumer-org string	Consumer Organization name or id (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for credentials:delete
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string	management server endpoint (required)
--space string	Space name or id (required)
--space-initiated	space-initiated

## Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic credentials:get

Get the Application Credential object by name or id

### Synopsis

Get the Application Credential object by name or id

```
apic credentials:get [flags]
```

### Options

-a, --app string	Application name or id (required)
-c, --catalog string	Catalog name or id (required)
--consumer-org string	Consumer Organization name or id (required)
--fields string	List of field names to return
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for credentials:get
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string	management server endpoint (required)
--space string	Space name or id (required)
--space-initiated	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic credentials:list

List the Application Credential objects

### Synopsis

---

List the Application Credential objects

```
apic credentials:list [flags]
```

### Options

---

<code>-a, --app string</code>	Application name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for credentials:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic credentials:reset-client-secret

Reset the client secret

### Synopsis

---

Reset the client secret

```
apic credentials:reset-client-secret [flags]
```

### Options

---

<code>-a, --app string</code>	Application name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for credentials:reset-client-secret
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic credentials:reset

Reset the client id and client secret

### Synopsis

---

Reset the client id and client secret

```
apic credentials:reset [flags]
```

### Options

---

<code>-a, --app string</code>	Application name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for credentials:reset
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic credentials:update

Update the Application Credential object by name or id

### Synopsis

---

Update the Application Credential object by name or id

```
apic credentials:update [flags]
```

### Options

---

<code>-a, --app string</code>	Application name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for credentials:update
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic credentials:verify-client-secret

Verify the client secret

### Synopsis

Verify the client secret

```
apic credentials:verify-client-secret [flags]
```

### Options

<code>-a, --app string</code>	Application name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for credentials:verify-client-secret
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic draft-apis

Draft Apis operations

### Synopsis

Draft Apis operations

```
apic draft-apis [flags]
```

### Options

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for draft-apis
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic draft-apis:clear-all

Clear all Draft API objects in all collections

### Synopsis

Clear all Draft API objects in all collections

```
apic draft-apis:clear-all [flags]
```

### Options

<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for draft-apis:clear-all
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic draft-apis:clear

Clear the Draft API objects

### Synopsis

Clear the Draft API objects

```
apic draft-apis:clear [flags]
```

### Options

<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for draft-apis:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic draft-apis:clone

Clone the draft-api objects

## Synopsis

---

Clone the draft-api objects

```
apic draft-apis:clone [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for draft-apis:clone
--limit int32    Maximum number of items to return
--offset int32   Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string  Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-apis:create

Create a Draft API object

## Synopsis

---

Create a Draft API object

```
apic draft-apis:create [flags]
```

## Options

---

```
--api_type string  The type of api (asynccapi, rest, graphql, wsd1_to_rest, or wsd1)
--assembly_type string The type of the assembly to generate (rest_to_proxy)
--disable_ws_security Disable generation of WS-Security definitions in api
--format string    Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
--gateway_type string The type of the gateway (datapower-gateway, datapower-api-gateway, event-gateway)
-h, --help         Help for draft-apis:create
-o, --org string   Organization name or id (required)
--output string    Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
--wsdl_service string Name of WSDL service to create the OpenAPI definition from
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-apis:delete

Delete a Draft API

## Synopsis

---

Delete a Draft API

```
apic draft-apis:delete [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for draft-apis:delete
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-apis:document

Get the Draft API document by name and version

## Synopsis

---

Get the Draft API document by name and version

```
apic draft-apis:document [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for draft-apis:document
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-apis:get

Get the Draft API object by name and version

## Synopsis

---

Get the Draft API object by name and version

```
apic draft-apis:get [flags]
```

## Options

---

<code>--fields string</code>	List of field names to return (default "add(wsdl,draft_api)")
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for draft-apis:get
<code>--id</code>	id

```
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string   management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string      Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic draft-apis:list

List the Draft API objects

## Synopsis

---

List the Draft API objects

```
apic draft-apis:list [flags]
```

## Options

---

```
--fields string      List of field names to return
--format string       Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for draft-apis:list
--limit int32        Maximum number of items to return
--offset int32       Offset item number from list to begin return
-o, --org string      Organization name or id (required)
--output string       Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string   management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string      Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic draft-apis:list-all

List all Draft API objects in all collections

## Synopsis

---

List all Draft API objects in all collections

```
apic draft-apis:list-all [flags]
```

## Options

---

```
--fields string      List of field names to return
--format string       Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for draft-apis:list-all
--limit int32        Maximum number of items to return
--offset int32       Offset item number from list to begin return
-o, --org string      Organization name or id (required)
--output string       Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string   management server endpoint (required)
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic draft-apis:update

Update the Draft API object by name and version

### Synopsis

Update the Draft API object by name and version

```
apic draft-apis:update [flags]
```

### Options

<code>--api_type string</code>	The type of api (asynccapi, rest, graphql, wsdl_to_rest, or wsdl)
<code>--disable_ws_security</code>	Disable generation of WS-Security definitions in api
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for draft-apis:update
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--wsdl_service string</code>	Name of WSDL service to create the OpenAPI definition from

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic draft-apis:update-wsdl

Update with a new wsdl

### Synopsis

Update with a new wsdl

```
apic draft-apis:update-wsdl [flags]
```

### Options

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for draft-apis:update-wsdl
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic draft-apis:validate

Validate the draft api

### Synopsis

---

Validate the draft api

```
apic draft-apis:validate [flags]
```

### Options

---

<code>--format</code>	string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>		Help for draft-apis:validate
<code>--id</code>		id
<code>-o, --org</code>	string	Organization name or id (required)
<code>--output</code>	string	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server</code>	string	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>		Accept the license for API Connect
<code>--debug</code>		Enable debug output
<code>--debug-output</code>	string	Write debug output to file
<code>--live-help</code>		Enable or disable tracking of limited usage information
<code>-m, --mode</code>	string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-apis:wsl

Get the Draft API wsl document by name and version

### Synopsis

---

Get the Draft API wsl document by name and version

```
apic draft-apis:wsl [flags]
```

### Options

---

<code>--format</code>	string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>		Help for draft-apis:wsl
<code>--id</code>		id
<code>-o, --org</code>	string	Organization name or id (required)
<code>--output</code>	string	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server</code>	string	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>		Accept the license for API Connect
<code>--debug</code>		Enable debug output
<code>--debug-output</code>	string	Write debug output to file
<code>--live-help</code>		Enable or disable tracking of limited usage information
<code>-m, --mode</code>	string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-products

Draft Products operations

## Synopsis

---

Draft Products operations

```
apic draft-products [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for draft-products
--limit int32   Maximum number of items to return
--offset int32  Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-products:clear-all

Clear all Draft Product objects in all collections

## Synopsis

---

Clear all Draft Product objects in all collections

```
apic draft-products:clear-all [flags]
```

## Options

---

```
--confirm string  Confirmation for critical updates (required)
--format string   Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for draft-products:clear-all
-o, --org string  Organization name or id (required)
--output string   Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-products:clear

Clear the Draft Product objects

## Synopsis

---

Clear the Draft Product objects

```
apic draft-products:clear [flags]
```

## Options

---

```
--confirm string Confirmation for critical updates (required)
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for draft-products:clear
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-products:clone

Clone the draft-product objects

### Synopsis

---

Clone the draft-product objects

```
apic draft-products:clone [flags]
```

### Options

---

```
--fields string List of field names to return
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for draft-products:clone
--limit int32 Maximum number of items to return
--offset int32 Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-products:create

Create a Draft Product object

### Synopsis

---

Create a Draft Product object

```
apic draft-products:create [flags]
```

### Options

---

```
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for draft-products:create
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
--product-only Upload only the product document
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic draft-products:delete

Delete a Draft Product

### Synopsis

Delete a Draft Product

```
apic draft-products:delete [flags]
```

### Options

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for draft-products:delete
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic draft-products:document

Get the Draft Product document by name and version

### Synopsis

Get the Draft Product document by name and version

```
apic draft-products:document [flags]
```

### Options

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for draft-products:document
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic draft-products:get

Get the Draft Product object by name and version

### Synopsis

---

Get the Draft Product object by name and version

```
apic draft-products:get [flags]
```

### Options

---

```
--fields string  List of field names to return (default "add(draft_product,url)")
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for draft-products:get
--id            id
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-products:list-all

List all Draft Product objects in all collections

### Synopsis

---

List all Draft Product objects in all collections

```
apic draft-products:list-all [flags]
```

### Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for draft-products:list-all
--limit int32   Maximum number of items to return
--offset int32  Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-products:list

List the Draft Product objects

## Synopsis

---

List the Draft Product objects

```
apic draft-products:list [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for draft-products:list
--limit int32    Maximum number of items to return
--offset int32   Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-products:publish

Publish a draft product

## Synopsis

---

Publish a draft product

```
apic draft-products:publish [flags]
```

## Options

---

```
-c, --catalog string  Catalog name or id (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
--gateway_services string The list of gateway service names to support partial publishing
-h, --help          Help for draft-products:publish
--migrate_subscriptions Migrate subscription when republish product
-o, --org string     Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--space string       Space name or id (required)
--stage             stage
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic draft-products:update

Update the Draft Product object by name and version

## Synopsis

---

Update the Draft Product object by name and version

```
apic draft-products:update [flags]
```

## Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for draft-products:update
--id            id
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic draft-products:validate

Validate the draft product

## Synopsis

---

Validate the draft product

```
apic draft-products:validate [flags]
```

## Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for draft-products:validate
--id            id
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic drafts

Drafts operations

## Synopsis

---

Drafts operations

```
apic drafts [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for drafts
--limit int32   Maximum number of items to return
--offset int32  Offset item number from list to begin return
-o, --org string Organization name or id (required)
```

```
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic drafts:clear

Clear the Draft objects

## Synopsis

---

Clear the Draft objects

```
apic drafts:clear [flags]
```

## Options

---

```
--confirm string Confirmation for critical updates (required)
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for drafts:clear
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic drafts:list

List the Draft objects

## Synopsis

---

List the Draft objects

```
apic drafts:list [flags]
```

## Options

---

```
--fields string List of field names to return
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for drafts:list
--limit int32 Maximum number of items to return
--offset int32 Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
```

```
--live-help      Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic entries

Entries operations

### Synopsis

Entries operations

```
apic entries [flags]
```

### Options

```
--fields string      List of field names to return
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for entries
--limit int32        Maximum number of items to return
--offset int32       Offset item number from list to begin return
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--truststore string  Truststore name or id (required)
```

### Options inherited from parent commands

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic entries:clear

Entries clear operations

### Synopsis

Entries clear operations

```
apic entries:clear [flags]
```

### Options

```
--confirm string    Confirmation for critical updates (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help          Help for entries:clear
-o, --org string     Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--truststore string  Truststore name or id (required)
```

### Options inherited from parent commands

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic entries:create

Entries create operations

### Synopsis

---

Entries create operations

```
apic entries:create [flags]
```

### Options

---

<code>--format</code> string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for entries:create
<code>-o, --org</code> string	Organization name or id (required)
<code>--output</code> string	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope</code> string	scope
<code>-s, --server</code> string	management server endpoint (required)
<code>--truststore</code> string	Truststore name or id (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output</code> string	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode</code> string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic entries:delete

Entries delete operations

### Synopsis

---

Entries delete operations

```
apic entries:delete [flags]
```

### Options

---

<code>--format</code> string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for entries:delete
<code>-o, --org</code> string	Organization name or id (required)
<code>--output</code> string	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope</code> string	scope
<code>-s, --server</code> string	management server endpoint (required)
<code>--truststore</code> string	Truststore name or id (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output</code> string	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode</code> string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic entries:get

Entries get operations

## Synopsis

---

Entries get operations

```
apic entries:get [flags]
```

## Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for entries:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--truststore string</code>	Truststore name or id (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic entries:list

Entries list operations

## Synopsis

---

Entries list operations

```
apic entries:list [flags]
```

## Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for entries:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--truststore string</code>	Truststore name or id (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic entries:update

Entries update operations

## Synopsis

---

Entries update operations

```
apic entries:update [flags]
```

## Options

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for entries:update
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--truststore string</code>	Truststore name or id (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic extensions

Extensions operations

## Synopsis

Extensions operations

```
apic extensions [flags]
```

## Options

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>--gateway-service string</code>	Gateway Service name or id (required)
<code>-h, --help</code>	Help for extensions
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic extensions:clear-all

Extensions clear-all operations

## Synopsis

Extensions clear-all operations

```
apic extensions:clear-all [flags]
```

## Options

---

```
-c, --catalog string          Catalog name or id (required)
--configured-gateway-service string  Configured Gateway Service name or id (required)
--confirm string             Confirmation for critical updates (required)
--format string              Output format. One of [json yaml go-template=... go-template-file=...], defaults to
yaml.
-h, --help                   Help for extensions:clear-all
-o, --org string              Organization name or id (required)
--output string              Write file(s) to directory, instead of STDOUT (default "-")
--scope string               scope

--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
--gateway-service string Gateway Service name or id (required)
-h, --help Help for gateway-extensions:create
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
--scope string scope
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic gateway-extensions:delete

---

Gateway Extensions delete operations

## Synopsis

---

Gateway Extensions delete operations

```
apic gateway-extensions:delete [flags]
```

## Options

---

```
--availability-zone string Availability Zone name or id (required)
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
--gateway-service string Gateway Service name or id (required)
-h, --help Help for gateway-extensions:delete
```

```
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string   management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic gateway-extensions:get

Gateway Extensions get operations

### Synopsis

---

Gateway Extensions get operations

```
apic gateway-extensions:get [flags]
```

### Options

---

```
--availability-zone string Availability Zone name or id (required)
--fields string           List of field names to return
--format string           Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
--gateway-service string  Gateway Service name or id (required)
-h, --help               Help for gateway-extensions:get
-o, --org string          Organization name or id (required)
--output string           Write file(s) to directory, use - for STDOUT. (default: cwd)
--scope string           scope
-s, --server string       management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic gateway-extensions:implementation

Get the Gateway Extension implementation document

### Synopsis

---

Get the Gateway Extension implementation document

```
apic gateway-extensions:implementation [flags]
```

### Options

---

```
--availability-zone string Availability Zone name or id (required)
--format string           Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
--gateway-service string  Gateway Service name or id (required)
-h, --help               Help for gateway-extensions:implementation
-o, --org string          Organization name or id (required)
--output string           Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string       management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic gateway-extensions:update

Gateway Extensions update operations

### Synopsis

Gateway Extensions update operations

```
apic gateway-extensions:update [flags]
```

### Options

```
--availability-zone string Availability Zone name or id (required)
--format string           Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
--gateway-service string  Gateway Service name or id (required)
-h, --help                Help for gateway-extensions:update
-o, --org string          Organization name or id (required)
--output string           Write file(s) to directory, instead of STDOUT (default "-")
--scope string            scope
-s, --server string       management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic gateway-services

Gateway Services operations

### Synopsis

Gateway Services operations

```
apic gateway-services [flags]
```

### Options

```
--availability-zone string Availability Zone name or id (required)
--fields string           List of field names to return
--format string           Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                Help for gateway-services
--limit int32             Maximum number of items to return
--offset int32            Offset item number from list to begin return
-o, --org string          Organization name or id (required)
--output string           Write file(s) to directory, instead of STDOUT (default "-")
--scope string            scope
-s, --server string       management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic gateway-services:clear

Clear the Gateway Service objects

### Synopsis

---

Clear the Gateway Service objects

```
apic gateway-services:clear [flags]
```

### Options

---

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for gateway-services:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic gateway-services:create

Create a Gateway Service object

### Synopsis

---

Create a Gateway Service object

```
apic gateway-services:create [flags]
```

### Options

---

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for gateway-services:create
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic gateway-services:delete

Delete the Gateway Service object by name or id

## Synopsis

---

Delete the Gateway Service object by name or id

```
apic gateway-services:delete [flags]
```

## Options

---

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for gateway-services:delete
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic gateway-services:get

Get the Gateway Service object by name or id

## Synopsis

---

Get the Gateway Service object by name or id

```
apic gateway-services:get [flags]
```

## Options

---

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for gateway-services:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic gateway-services:list

List the Gateway Service objects

## Synopsis

---

List the Gateway Service objects

```
apic gateway-services:list [flags]
```

## Options

---

```
--availability-zone string  Availability Zone name or id (required)
--fields string             List of field names to return
--format string             Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                 Help for gateway-services:list
--limit int32              Maximum number of items to return
--offset int32             Offset item number from list to begin return
-o, --org string           Organization name or id (required)
--output string            Write file(s) to directory, instead of STDOUT (default "-")
--scope string             scope
-s, --server string        management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license          Accept the license for API Connect
--debug                  Enable debug output
--debug-output string     Write debug output to file
--live-help              Enable or disable tracking of limited usage information
-m, --mode string        Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic gateway-services:reset-oauth-secret

Reset the oauth shared crypto material

## Synopsis

---

Reset the oauth shared crypto material

```
apic gateway-services:reset-oauth-secret [flags]
```

## Options

---

```
--availability-zone string  Availability Zone name or id (required)
--format string             Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                 Help for gateway-services:reset-oauth-secret
-o, --org string           Organization name or id (required)
--output string            Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string        management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license          Accept the license for API Connect
--debug                  Enable debug output
--debug-output string     Write debug output to file
--live-help              Enable or disable tracking of limited usage information
-m, --mode string        Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic gateway-services:update

Update the Gateway Service object by name or id

## Synopsis

---

Update the Gateway Service object by name or id

```
apic gateway-services:update [flags]
```

## Options

---

```
--availability-zone string  Availability Zone name or id (required)
--format string             Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                 Help for gateway-services:update
-o, --org string           Organization name or id (required)
```

```
--output string      Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string  management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic global-policies

Global Policies operations

### Synopsis

---

Global Policies operations

```
apic global-policies [flags]
```

### Options

---

```
-c, --catalog string      Catalog name or id (required)
--configured-gateway-service string Configured Gateway Service name or id (required)
--fields string           List of field names to return
--format string           Output format. One of [json yaml go-template=... go-template-file=...], defaults to
yaml.
-h, --help                Help for global-policies
--limit int32             Maximum number of items to return
--offset int32            Offset item number from list to begin return
-o, --org string          Organization name or id (required)
--output string           Write file(s) to directory, instead of STDOUT (default "-")
--scope string            scope
-s, --server string       management server endpoint (required)
--space string            Space name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic global-policies:clear

Global Policies clear operations

### Synopsis

---

Global Policies clear operations

```
apic global-policies:clear [flags]
```

### Options

---

```
-c, --catalog string      Catalog name or id (required)
--configured-gateway-service string Configured Gateway Service name or id (required)
--confirm string          Confirmation for critical updates (required)
--format string           Output format. One of [json yaml go-template=... go-template-file=...], defaults to
yaml.
-h, --help                Help for global-policies:clear
-o, --org string          Organization name or id (required)
--output string           Write file(s) to directory, instead of STDOUT (default "-")
--scope string            scope
```

```
-s, --server string      management server endpoint (required)
--space string          Space name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic global-policies:clear-all

Global Policies clear-all operations

### Synopsis

---

Global Policies clear-all operations

```
apic global-policies:clear-all [flags]
```

### Options

---

```
-c, --catalog string      Catalog name or id (required)
--configured-gateway-service string Configured Gateway Service name or id (required)
--confirm string         Confirmation for critical updates (required)
--format string          Output format. One of [json yaml go-template=... go-template-file=...], defaults to
yaml.

## apic global-policies:get

Global Policies get operations

### Synopsis

---

Global Policies get operations

```
apic global-policies:get [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for global-policies:get
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic global-policies:list

Global Policies list operations

### Synopsis

---

Global Policies list operations

```
apic global-policies:list [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for global-policies:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic groups

Groups operations

### Synopsis

Groups operations

```
apic groups [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for groups
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic groups:clear

Groups clear operations

### Synopsis

Groups clear operations

```
apic groups:clear [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for groups:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output

```
--debug-output string  Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic groups:create

Groups create operations

### Synopsis

Groups create operations

```
apic groups:create [flags]
```

### Options

```
-c, --catalog string  Catalog name or id (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for groups:create
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--space string       Space name or id (required)
--space-initiated    space-initiated
```

### Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic groups:delete

Groups delete operations

### Synopsis

Groups delete operations

```
apic groups:delete [flags]
```

### Options

```
-c, --catalog string  Catalog name or id (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for groups:delete
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--space string       Space name or id (required)
--space-initiated    space-initiated
```

### Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic groups:get

Groups get operations

### Synopsis

Groups get operations

```
apic groups:get [flags]
```

### Options

```
-c, --catalog string    Catalog name or id (required)
--fields string        List of field names to return
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for groups:get
-o, --org string        Organization name or id (required)
--output string        Write file(s) to directory, use - for STDOUT. (default: cwd)
--scope string         scope
-s, --server string    management server endpoint (required)
--space string         Space name or id (required)
--space-initiated     space-initiated
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic groups:list

Groups list operations

### Synopsis

Groups list operations

```
apic groups:list [flags]
```

### Options

```
-c, --catalog string    Catalog name or id (required)
--fields string        List of field names to return
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for groups:list
--limit int32         Maximum number of items to return
--offset int32        Offset item number from list to begin return
-o, --org string        Organization name or id (required)
--output string        Write file(s) to directory, instead of STDOUT (default "-")
--scope string         scope
-s, --server string    management server endpoint (required)
--space string         Space name or id (required)
--space-initiated     space-initiated
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic groups:update

Groups update operations

### Synopsis

Groups update operations

```
apic groups:update [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for groups:update
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic iam-apikey

Log in to an IBM API Connect cloud Reserved Instance using an IBM Cloud API key

### Synopsis

Log in to an IBM API Connect cloud Reserved Instance using an IBM Cloud API key

```
apic iam-apikey [flags]
```

### Examples

```
Interactive iam-apikey login
$ apic iam-apikey
Enter your IBM Cloud details
? Server: mgmthost.com
? IBM Cloud API Key?: my-apikey
Logged into mgmthost.com successfully
```

```
Non-interactive
$ apic iam-apikey --apiKey <apikey> --server mgmthost.com
Logged into mgmthost.com successfully
```

### Options

<code>--apiKey string</code>	IBM cloud api key
<code>-h, --help</code>	Help for iam-apikey
<code>-s, --server string</code>	management server endpoint
<code>--tokenendpoint string</code>	iam server endpoint (default: iam.cloud.ibm.com)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output

```
--debug-output string  Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic identity-providers

Identity Providers operations

### Synopsis

Identity Providers operations

```
apic identity-providers [flags]
```

### Options

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for identity-providers
--limit int32   Maximum number of items to return
--offset int32  Offset item number from list to begin return
--output string Write file(s) to directory, instead of STDOUT (default "-")
--scope string  scope
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help      Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic identity-providers:list

Identity Providers list operations

### Synopsis

Identity Providers list operations

```
apic identity-providers:list [flags]
```

### Options

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for identity-providers:list
--limit int32   Maximum number of items to return
--offset int32  Offset item number from list to begin return
--output string Write file(s) to directory, instead of STDOUT (default "-")
--scope string  scope
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help      Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic integrations

Integrations operations

### Synopsis

Integrations operations

```
apic integrations [flags]
```

### Options

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for integrations
--limit int32    Maximum number of items to return
--offset int32   Offset item number from list to begin return
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic integrations:clear

Integrations clear operations

### Synopsis

Integrations clear operations

```
apic integrations:clear [flags]
```

### Options

```
--confirm string  Confirmation for critical updates (required)
--format string    Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help        Help for integrations:clear
--output string    Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
--subcollection string subcollection
```

### Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic integrations:create

Integrations create operations

## Synopsis

---

Integrations create operations

```
apic integrations:create [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for integrations:create
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--subcollection string</code>	subcollection

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic integrations:delete

Integrations delete operations

## Synopsis

---

Integrations delete operations

```
apic integrations:delete [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for integrations:delete
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--subcollection string</code>	subcollection

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic integrations:get

Integrations get operations

## Synopsis

---

Integrations get operations

```
apic integrations:get [flags]
```

## Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for integrations:get

```
--output string      Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string  management server endpoint (required)
--subcollection string subcollection
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic integrations:list

Integrations list operations

### Synopsis

---

Integrations list operations

```
apic integrations:list [flags]
```

### Options

---

```
--fields string      List of field names to return
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for integrations:list
--limit int32        Maximum number of items to return
--offset int32       Offset item number from list to begin return
--output string      Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string  management server endpoint (required)
--subcollection string subcollection
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic integrations:list-all

List all Integration objects in all collections

### Synopsis

---

List all Integration objects in all collections

```
apic integrations:list-all [flags]
```

### Options

---

```
--fields string      List of field names to return
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for integrations:list-all
--limit int32        Maximum number of items to return
--offset int32       Offset item number from list to begin return
--output string      Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string  management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic invitations

Invitations operations

### Synopsis

Invitations operations

```
apic invitations [flags]
```

### Options

```
-c, --catalog string  Catalog name or id (required)
--fields string      List of field names to return
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for invitations
--limit int32        Maximum number of items to return
--offset int32       Offset item number from list to begin return
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--space string       Space name or id (required)
--space-initiated    space-initiated
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic invitations:clear

Invitations clear operations

### Synopsis

---

Invitations clear operations

```
apic invitations:clear [flags]
```

### Options

---

-c, --catalog string	Catalog name or id (required)
--confirm string	Confirmation for critical updates (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for invitations:clear
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
--scope string	scope
-s, --server string	management server endpoint (required)
--space string	Space name or id (required)
--space-initiated	space-initiated

### Options inherited from parent commands

---

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic invitations:create

Invitations create operations

### Synopsis

---

Invitations create operations

```
apic invitations:create [flags]
```

### Options

---

-c, --catalog string	Catalog name or id (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for invitations:create
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
--scope string	scope
-s, --server string	management server endpoint (required)
--space string	Space name or id (required)
--space-initiated	space-initiated

### Options inherited from parent commands

---

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic invitations:delete

Invitations delete operations

### Synopsis

---

Invitations delete operations

```
apic invitations:delete [flags]
```

### Options

---

```
-c, --catalog string      Catalog name or id (required)
--format string          Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help               Help for invitations:delete
-o, --org string         Organization name or id (required)
--output string          Write file(s) to directory, instead of STDOUT (default "-")
--scope string           scope
-s, --server string      management server endpoint (required)
--space string           Space name or id (required)
--space-initiated       space-initiated
```

### Options inherited from parent commands

---

```
--accept-license        Accept the license for API Connect
--debug                 Enable debug output
--debug-output string   Write debug output to file
--live-help             Enable or disable tracking of limited usage information
-m, --mode string       Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic invitations:get

Invitations get operations

### Synopsis

---

Invitations get operations

```
apic invitations:get [flags]
```

### Options

---

```
-c, --catalog string      Catalog name or id (required)
--fields string          List of field names to return
--format string          Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help               Help for invitations:get
-o, --org string         Organization name or id (required)
--output string          Write file(s) to directory, use - for STDOUT. (default: cwd)
--scope string           scope
-s, --server string      management server endpoint (required)
--space string           Space name or id (required)
--space-initiated       space-initiated
```

### Options inherited from parent commands

---

```
--accept-license        Accept the license for API Connect
--debug                 Enable debug output
--debug-output string   Write debug output to file
--live-help             Enable or disable tracking of limited usage information
-m, --mode string       Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic invitations:list

Invitations list operations

### Synopsis

---

Invitations list operations

```
apic invitations:list [flags]
```

### Options

---

```
-c, --catalog string    Catalog name or id (required)
--fields string        List of field names to return
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for invitations:list
--limit int32         Maximum number of items to return
--offset int32        Offset item number from list to begin return
-o, --org string       Organization name or id (required)
--output string        Write file(s) to directory, instead of STDOUT (default "-")
--scope string         scope
-s, --server string    management server endpoint (required)
--space string         Space name or id (required)
--space-initiated     space-initiated
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic invitations:update

Invitations update operations

### Synopsis

---

Invitations update operations

```
apic invitations:update [flags]
```

### Options

---

```
-c, --catalog string    Catalog name or id (required)
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for invitations:update
-o, --org string       Organization name or id (required)
--output string        Write file(s) to directory, instead of STDOUT (default "-")
--scope string         scope
-s, --server string    management server endpoint (required)
--space string         Space name or id (required)
--space-initiated     space-initiated
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic jobs

1860 IBM API Connect 10.0.2.0 to 10.0.4.x

## Synopsis

---

Jobs operations

```
apic jobs [flags]
```

## Options

---

```
--billing string  Billing name or id (required)
--fields string   List of field names to return
--format string   Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help        Help for jobs
--limit int32     Maximum number of items to return
--offset int32    Offset item number from list to begin return
-o, --org string  Organization name or id (required)
--output string   Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic jobs:clear

Clear the Job objects

## Synopsis

---

Clear the Job objects

```
apic jobs:clear [flags]
```

## Options

---

```
--billing string  Billing name or id (required)
--confirm string  Confirmation for critical updates (required)
--format string   Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help        Help for jobs:clear
-o, --org string  Organization name or id (required)
--output string   Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic jobs:delete

Delete the Job object by name or id

## Synopsis

---

Delete the Job object by name or id

```
apic jobs:delete [flags]
```

## Options

---

<code>--billing</code> string	Billing name or id (required)
<code>--format</code> string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for jobs:delete
<code>-o, --org</code> string	Organization name or id (required)
<code>--output</code> string	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server</code> string	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output</code> string	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode</code> string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic jobs:get

Get the Job object by name or id

## Synopsis

---

Get the Job object by name or id

```
apic jobs:get [flags]
```

## Options

---

<code>--billing</code> string	Billing name or id (required)
<code>--fields</code> string	List of field names to return
<code>--format</code> string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for jobs:get
<code>-o, --org</code> string	Organization name or id (required)
<code>--output</code> string	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server</code> string	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output</code> string	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode</code> string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic jobs:list

List the Job objects

## Synopsis

---

List the Job objects

```
apic jobs:list [flags]
```

## Options

---

<code>--billing</code> string	Billing name or id (required)
<code>--fields</code> string	List of field names to return
<code>--format</code> string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for jobs:list
<code>--limit</code> int32	Maximum number of items to return

```
--offset int32      Offset item number from list to begin return
-o, --org string    Organization name or id (required)
--output string     Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license    Accept the license for API Connect
--debug            Enable debug output
--debug-output string Write debug output to file
--live-help        Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic jobs:retry

Re-attempt blocked or failed job

## Synopsis

---

Re-attempt blocked or failed job

```
apic jobs:retry [flags]
```

## Options

---

```
--billing string    Billing name or id (required)
--confirm string    Confirmation for critical updates (required)
--format string     Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help         Help for jobs:retry
-o, --org string    Organization name or id (required)
--output string     Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license    Accept the license for API Connect
--debug            Enable debug output
--debug-output string Write debug output to file
--live-help        Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic keystores

Keystores operations

## Synopsis

---

Keystores operations

```
apic keystores [flags]
```

## Options

---

```
--fields string    List of field names to return
--format string    Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help        Help for keystores
--limit int32     Maximum number of items to return
--offset int32    Offset item number from list to begin return
-o, --org string  Organization name or id (required)
--output string   Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic keystores:clear

Clear the Keystore objects

### Synopsis

Clear the Keystore objects

```
apic keystores:clear [flags]
```

### Options

```
--confirm string    Confirmation for critical updates (required)
--format string     Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help          Help for keystores:clear
-o, --org string     Organization name or id (required)
--output string     Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic keystores:create

Create a Keystore object

### Synopsis

Create a Keystore object

```
apic keystores:create [flags]
```

### Options

```
--format string     Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help          Help for keystores:create
-o, --org string     Organization name or id (required)
--output string     Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic keystores:delete

Delete the Keystore object by name or id

### Synopsis

---

Delete the Keystore object by name or id

```
apic keystores:delete [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for keystores:delete
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic keystores:get

Get the Keystore object by name or id

### Synopsis

---

Get the Keystore object by name or id

```
apic keystores:get [flags]
```

### Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for keystores:get
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic keystores:list

List the Keystore objects

### Synopsis

---

List the Keystore objects

```
apic keystores:list [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for keystores:list
--limit int32    Maximum number of items to return
--offset int32   Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic keystores:update

Update the Keystore object by name or id

## Synopsis

---

Update the Keystore object by name or id

```
apic keystores:update [flags]
```

## Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for keystores:update
-o, --org string Organization name or id (required)
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic licenses

Review the license for API Connect

## Synopsis

---

Review the license for API Connect

```
apic licenses [flags]
```

## Options

---

```
-h, --help      Help for licenses
--non-ibm-license Display the non IBM license files.
--notices       Display the notices file
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic log-spec

Log Spec operations

### Synopsis

---

Log Spec operations

```
apic log-spec [flags]
```

### Options

---

```
-h, --help Help for log-spec
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic log-spec:get

Get the Log Spec object

### Synopsis

---

Get the Log Spec object

```
apic log-spec:get [flags]
```

### Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for log-spec:get
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic log-spec:update

Update the Log Spec object

### Synopsis

---

Update the Log Spec object

```
apic log-spec:update [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for log-spec:update
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic login

Log in to an IBM API Connect cloud

### Synopsis

---

Log in to an IBM API Connect cloud

```
apic login [flags]
```

### Examples

---

```
Interactive login
$ apic login
Enter your API Connect credentials
? Server: mgmthost.com
? Realm: company/realm
? Username: tommy
? Password: password
Logged into mgmthost.com successfully
```

```
Non-interactive login
$ apic login --username tommy --password password --server mgmthost.com --realm company/realm
Logged into mgmthost.com successfully
```

### Options

---

```
--apiKey string  apiKey
--context string  context
-h, --help      Help for login
-p, --password string password
-r, --realm string realm
-s, --server string management server endpoint
--sso           sso
-u, --username string user name
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic logout

Log out of an IBM API Connect cloud

### Synopsis

---

Log out of an IBM API Connect cloud

```
apic logout [flags]
```

### Examples

---

```
Clear the local authentication credentials for mgmthost.com
$ apic logout --server mgmthost.com
Logged out of server mgmthost.com
```

### Options

---

```
-h, --help           Help for logout
-s, --server string  management server endpoint
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic mail-servers

Mail Servers operations

### Synopsis

---

Mail Servers operations

```
apic mail-servers [flags]
```

### Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for mail-servers
--limit int32    Maximum number of items to return
--offset int32   Offset item number from list to begin return
-o, --org string  Organization name or id (required)
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic mail-servers:clear

Clear the Mail Server objects

### Synopsis

---

Clear the Mail Server objects

```
apic mail-servers:clear [flags]
```

### Options

---

<code>--confirm</code>	string	Confirmation for critical updates (required)
<code>--format</code>	string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>		Help for mail-servers:clear
<code>-o, --org</code>	string	Organization name or id (required)
<code>--output</code>	string	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server</code>	string	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>		Accept the license for API Connect
<code>--debug</code>		Enable debug output
<code>--debug-output</code>	string	Write debug output to file
<code>--live-help</code>		Enable or disable tracking of limited usage information
<code>-m, --mode</code>	string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic mail-servers:create

Create a Mail Server object

### Synopsis

---

Create a Mail Server object

```
apic mail-servers:create [flags]
```

### Options

---

<code>--format</code>	string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>		Help for mail-servers:create
<code>-o, --org</code>	string	Organization name or id (required)
<code>--output</code>	string	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server</code>	string	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>		Accept the license for API Connect
<code>--debug</code>		Enable debug output
<code>--debug-output</code>	string	Write debug output to file
<code>--live-help</code>		Enable or disable tracking of limited usage information
<code>-m, --mode</code>	string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic mail-servers:delete

Delete the Mail Server object by name or id

### Synopsis

---

Delete the Mail Server object by name or id

```
apic mail-servers:delete [flags]
```

## Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.  
-h, --help      Help for mail-servers:delete  
-o, --org string Organization name or id (required)  
--output string Write file(s) to directory, instead of STDOUT (default "-")  
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect  
--debug           Enable debug output  
--debug-output string Write debug output to file  
--live-help       Enable or disable tracking of limited usage information  
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic mail-servers:get

Get the Mail Server object by name or id

## Synopsis

---

Get the Mail Server object by name or id

```
apic mail-servers:get [flags]
```

## Options

---

```
--fields string  List of field names to return  
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.  
-h, --help      Help for mail-servers:get  
-o, --org string Organization name or id (required)  
--output string  Write file(s) to directory, use - for STDOUT. (default: cwd)  
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect  
--debug           Enable debug output  
--debug-output string Write debug output to file  
--live-help       Enable or disable tracking of limited usage information  
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic mail-servers:list

List the Mail Server objects

## Synopsis

---

List the Mail Server objects

```
apic mail-servers:list [flags]
```

## Options

---

```
--fields string  List of field names to return  
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.  
-h, --help      Help for mail-servers:list  
--limit int32    Maximum number of items to return  
--offset int32   Offset item number from list to begin return  
-o, --org string Organization name or id (required)
```

```
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic mail-servers:test-connection

Test a Mail Server connection

### Synopsis

---

Test a Mail Server connection

```
apic mail-servers:test-connection [flags]
```

### Options

---

```
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for mail-servers:test-connection
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
--test-config-only test-config-only
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic mail-servers:update

Update the Mail Server object by name or id

### Synopsis

---

Update the Mail Server object by name or id

```
apic mail-servers:update [flags]
```

### Options

---

```
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for mail-servers:update
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic me

Me operations

### Synopsis

---

Me operations

```
apic me [flags]
```

### Options

---

```
-h, --help Help for me
```

### Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic me:change-password

Change my password

### Synopsis

---

Change my password

```
apic me:change-password [flags]
```

### Options

---

```
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for me:change-password
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic me:delete

Delete the Me object

### Synopsis

---

Delete the Me object

```
apic me:delete [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for me:delete
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic me:get

Get the Me object

## Synopsis

---

Get the Me object

```
apic me:get [flags]
```

## Options

---

<code>--context string</code>	user's login context admin/manager
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for me:get
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic me:update

Update the Me object

## Synopsis

---

Update the Me object

```
apic me:update [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for me:update
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic member-invitations

Member Invitations operations

### Synopsis

---

Member Invitations operations

```
apic member-invitations [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for member-invitations
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic member-invitations:clear

Member Invitations clear operations

### Synopsis

---

Member Invitations clear operations

```
apic member-invitations:clear [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for member-invitations:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic member-invitations:create

Member Invitations create operations

### Synopsis

---

Member Invitations create operations

```
apic member-invitations:create [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for member-invitations:create
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic member-invitations:delete

Member Invitations delete operations

### Synopsis

---

Member Invitations delete operations

```
apic member-invitations:delete [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for member-invitations:delete
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic member-invitations:get

Member Invitations get operations

### Synopsis

Member Invitations get operations

```
apic member-invitations:get [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for member-invitations:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic member-invitations:list

Member Invitations list operations

### Synopsis

Member Invitations list operations

```
apic member-invitations:list [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for member-invitations:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic member-invitations:update

Member Invitations update operations

### Synopsis

Member Invitations update operations

```
apic member-invitations:update [flags]
```

### Options

```
-c, --catalog string    Catalog name or id (required)
--consumer-org string  Consumer Organization name or id (required)
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for member-invitations:update
-o, --org string       Organization name or id (required)
--output string        Write file(s) to directory, instead of STDOUT (default "-")
--scope string         scope
-s, --server string    management server endpoint (required)
--space string         Space name or id (required)
--space-initiated      space-initiated
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic members

Members operations

### Synopsis

Members operations

```
apic members [flags]
```

### Options

```
-c, --catalog string    Catalog name or id (required)
--consumer-org string  Consumer Organization name or id (required)
--fields string        List of field names to return
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for members
--limit int32          Maximum number of items to return
--offset int32         Offset item number from list to begin return
-o, --org string       Organization name or id (required)
--output string        Write file(s) to directory, instead of STDOUT (default "-")
--scope string         scope
-s, --server string    management server endpoint (required)
--space string         Space name or id (required)
--space-initiated      space-initiated
```

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic members:clear

Members clear operations

### Synopsis

Members clear operations

```
apic members:clear [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for members:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic members:create

Members create operations

### Synopsis

Members create operations

```
apic members:create [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for members:create
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file

```
--live-help      Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic members:delete

Members delete operations

### Synopsis

Members delete operations

```
apic members:delete [flags]
```

### Options

```
-c, --catalog string      Catalog name or id (required)
--consumer-org string    Consumer Organization name or id (required)
--format string          Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help               Help for members:delete
-o, --org string         Organization name or id (required)
--output string          Write file(s) to directory, instead of STDOUT (default "-")
--scope string           scope
-s, --server string      management server endpoint (required)
--space string           Space name or id (required)
--space-initiated        space-initiated
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic members:get

Members get operations

### Synopsis

Members get operations

```
apic members:get [flags]
```

### Options

```
-c, --catalog string      Catalog name or id (required)
--consumer-org string    Consumer Organization name or id (required)
--fields string          List of field names to return
--format string          Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help               Help for members:get
-o, --org string         Organization name or id (required)
--output string          Write file(s) to directory, use - for STDOUT. (default: cwd)
--scope string           scope
-s, --server string      management server endpoint (required)
--space string           Space name or id (required)
--space-initiated        space-initiated
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic members:list

Members list operations

### Synopsis

---

Members list operations

```
apic members:list [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for members:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic members:update

Members update operations

### Synopsis

---

Members update operations

```
apic members:update [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for members:update
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic notification-languages

Notification Languages operations

### Synopsis

Notification Languages operations

```
apic notification-languages [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for notification-languages
<code>--notification-template string</code>	Notification Template name or id (required)
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--subcollection string</code>	subcollection

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic notification-styles

Notification Styles operations

### Synopsis

---

Notification Styles operations

```
apic notification-styles [flags]
```

### Options

---

```
-h, --help Help for notification-styles
```

### Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic notification-styles:get

Notification Styles get operations

### Synopsis

---

Notification Styles get operations

```
apic notification-styles:get [flags]
```

### Options

---

```
-c, --catalog string Catalog name or id (required)
--fields string List of field names to return
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for notification-styles:get
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, use - for STDOUT. (default: cwd)
--scope string scope
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

--scope string         scope
-s, --server string    management server endpoint (required)
--space string         Space name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic notification-templates:update

Notification Templates update operations

### Synopsis

---

Notification Templates update operations

```
apic notification-templates:update [flags]
```

### Options

---

```
-c, --catalog string    Catalog name or id (required)
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for notification-templates:update
-o, --org string       Organization name or id (required)
--output string        Write file(s) to directory, instead of STDOUT (default "-")
--scope string         scope
-s, --server string    management server endpoint (required)
--space string         Space name or id (required)
--subcollection string subcollection
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic oauth-providers

Oauth Providers operations

### Synopsis

---

Oauth Providers operations

```
apic oauth-providers [flags]
```

### Options

---

```
--fields string    List of field names to return
--format string   Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help        Help for oauth-providers
--limit int32     Maximum number of items to return
--offset int32    Offset item number from list to begin return
-o, --org string  Organization name or id (required)
--output string   Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic oauth-providers:clear

Clear the OAuth Provider objects

### Synopsis

---

Clear the OAuth Provider objects

```
apic oauth-providers:clear [flags]
```

### Options

---

```
--confirm string  Confirmation for critical updates (required)
--format string   Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help        Help for oauth-providers:clear
-o, --org string  Organization name or id (required)
--output string   Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic oauth-providers:create

Create a OAuth Provider object

### Synopsis

---

Create a OAuth Provider object

```
apic oauth-providers:create [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for oauth-providers:create
-o, --org string  Organization name or id (required)
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic oauth-providers:delete

Delete the Oauth Provider object by name or id

### Synopsis

Delete the Oauth Provider object by name or id

```
apic oauth-providers:delete [flags]
```

### Options

```
--format string    Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help         Help for oauth-providers:delete
-o, --org string   Organization name or id (required)
--output string    Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic oauth-providers:get

Get the Oauth Provider object by name or id

### Synopsis

Get the Oauth Provider object by name or id

```
apic oauth-providers:get [flags]
```

### Options

```
--fields string    List of field names to return
--format string    Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help         Help for oauth-providers:get
-o, --org string   Organization name or id (required)
--output string    Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic oauth-providers:list

List the OAuth Provider objects

### Synopsis

---

List the OAuth Provider objects

```
apic oauth-providers:list [flags]
```

### Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for oauth-providers:list
--limit int32    Maximum number of items to return
--offset int32   Offset item number from list to begin return
-o, --org string  Organization name or id (required)
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic oauth-providers:update

Update the OAuth Provider object by name or id

### Synopsis

---

Update the OAuth Provider object by name or id

```
apic oauth-providers:update [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for oauth-providers:update
-o, --org string  Organization name or id (required)
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic org-settings

Org Settings operations

### Synopsis

---

Org Settings operations

```
apic org-settings [flags]
```

## Options

---

```
-h, --help Help for org-settings
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic org-settings:get

Get the Organization Setting object

## Synopsis

---

Get the Organization Setting object

```
apic org-settings:get [flags]
```

## Options

---

```
--fields string List of field names to return
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for org-settings:get
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic org-settings:update

Update the Organization Setting object

## Synopsis

---

Update the Organization Setting object

```
apic org-settings:update [flags]
```

## Options

---

```
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for org-settings:update
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic orgs

Orgs operations

### Synopsis

---

Orgs operations

```
apic orgs [flags]
```

### Options

---

```
--fields string      List of field names to return
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for orgs
--limit int32        Maximum number of items to return
--my                 my
--offset int32       Offset item number from list to begin return
--org_type string    Type of orgs to return
--output string      Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string  management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic orgs:clear

Clear the Organization objects

### Synopsis

---

Clear the Organization objects

```
apic orgs:clear [flags]
```

### Options

---

```
--confirm string      Confirmation for critical updates (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for orgs:clear
--output string      Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string  management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic orgs:create

Create an Organization object

### Synopsis

---

Create an Organization object

```
apic orgs:create [flags]
```

### Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for orgs:create
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic orgs:delete

Delete the Organization object by name or id

### Synopsis

---

Delete the Organization object by name or id

```
apic orgs:delete [flags]
```

### Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for orgs:delete
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic orgs:get

Get the Organization object by name or id

### Synopsis

---

Get the Organization object by name or id

```
apic orgs:get [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for orgs:get
--output string  Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic orgs:list

List the Organization objects

## Synopsis

---

List the Organization objects

```
apic orgs:list [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for orgs:list
--limit int32    Maximum number of items to return
--my             my
--offset int32   Offset item number from list to begin return
--org_type string Type of orgs to return
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic orgs:transfer-owner

Transfer owner to an associate

## Synopsis

---

Transfer owner to an associate

```
apic orgs:transfer-owner [flags]
```

## Options

---

```
--cascade  Cascade the behavior
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help  Help for orgs:transfer-owner
```

```
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic orgs:update

Update the Organization object by name or id

## Synopsis

---

Update the Organization object by name or id

```
apic orgs:update [flags]
```

## Options

---

```
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for orgs:update
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic payment-methods

Payment Methods operations

## Synopsis

---

Payment Methods operations

```
apic payment-methods [flags]
```

## Options

---

```
-c, --catalog string Catalog name or id (required)
--consumer-org string Consumer Organization name or id (required)
--fields string List of field names to return
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for payment-methods
--limit int32 Maximum number of items to return
--offset int32 Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
--space string Space name or id (required)
--space-initiated space-initiated
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic payment-methods:create

Create a Payment Method object

### Synopsis

Create a Payment Method object

```
apic payment-methods:create [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for payment-methods:create
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic payment-methods:delete

Delete the Payment Method object by name or id

### Synopsis

Delete the Payment Method object by name or id

```
apic payment-methods:delete [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for payment-methods:delete
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic payment-methods:get

Get the Payment Method object by name or id

### Synopsis

Get the Payment Method object by name or id

```
apic payment-methods:get [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for payment-methods:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic payment-methods:list

List the Payment Method objects

### Synopsis

List the Payment Method objects

```
apic payment-methods:list [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for payment-methods:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic payment-methods:update

Update the Payment Method object by name or id

### Synopsis

---

Update the Payment Method object by name or id

```
apic payment-methods:update [flags]
```

### Options

---

```
-c, --catalog string      Catalog name or id (required)
--consumer-org string    Consumer Organization name or id (required)
--format string          Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help              Help for payment-methods:update
-o, --org string         Organization name or id (required)
--output string          Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string      management server endpoint (required)
--space string          Space name or id (required)
--space-initiated       space-initiated
```

### Options inherited from parent commands

---

```
--accept-license        Accept the license for API Connect
--debug                Enable debug output
--debug-output string   Write debug output to file
--live-help            Enable or disable tracking of limited usage information
-m, --mode string       Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic permissions

Permissions operations

### Synopsis

---

Permissions operations

```
apic permissions [flags]
```

### Options

---

```
--fields string        List of field names to return
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help            Help for permissions
--limit int32         Maximum number of items to return
--offset int32        Offset item number from list to begin return
--output string       Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string   management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license        Accept the license for API Connect
--debug                Enable debug output
--debug-output string   Write debug output to file
--live-help            Enable or disable tracking of limited usage information
-m, --mode string       Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic permissions:get

Permissions get operations

### Synopsis

---

Permissions get operations

```
apic permissions:get [flags]
```

### Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for permissions:get
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)
<code>--subcollection string</code>	subcollection

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic permissions:list

Permissions list operations

### Synopsis

---

Permissions list operations

```
apic permissions:list [flags]
```

### Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for permissions:list
<code>--limit int32</code>	Maximum number of items to return
<code>--my</code>	my
<code>--offset int32</code>	Offset item number from list to begin return
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--subcollection string</code>	subcollection

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic permissions:list-all

List all Permission objects in all collections

## Synopsis

---

List all Permission objects in all collections

```
apic permissions:list-all [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for permissions:list-all
--limit int32    Maximum number of items to return
--offset int32   Offset item number from list to begin return
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic policies

Policies operations

## Synopsis

---

Policies operations

```
apic policies [flags]
```

## Options

---

```
--availability-zone string  Availability Zone name or id (required)
-c, --catalog string        Catalog name or id (required)
--configured-gateway-service string Configured Gateway Service name or id (required)
--fields string            List of field names to return
--format string            Output format. One of [json yaml go-template=... go-template-file=...], defaults to
yaml.
--gateway-service string    Gateway Service name or id (required)
-h, --help                 Help for policies
--limit int32              Maximum number of items to return
--offset int32             Offset item number from list to begin return
-o, --org string           Organization name or id (required)
--output string            Write file(s) to directory, instead of STDOUT (default "-")
--scope string             scope
-s, --server string        management server endpoint (required)
--space string            Space name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic policies:clear

Policies clear operations

## Synopsis

---

Policies clear operations

```
apic policies:clear [flags]
```

## Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to

yaml.

<code>-h, --help</code>	Help for policies:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic policies:clear-all

Policies clear-all operations

## Synopsis

---

Policies clear-all operations

```
apic policies:clear-all [flags]
```

## Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to

yaml.

<code>-h, --help</code>	Help for policies:clear-all
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic policies:clone

Policies clone operations

## Synopsis

---

Policies clone operations

```
apic policies:clone [flags]
```

## Options

---

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>--gateway-service string</code>	Gateway Service name or id (required)
<code>-h, --help</code>	Help for policies:clone
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic policies:create

Policies create operations

## Synopsis

---

Policies create operations

```
apic policies:create [flags]
```

## Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for policies:create
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--policy-file string</code>	Policy document override
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic policies:delete

## Synopsis

Policies delete operations

```
apic policies:delete [flags]
```

## Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for policies:delete
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic policies:document

Policies document operations

## Synopsis

Policies document operations

```
apic policies:document [flags]
```

## Options

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>--gateway-service string</code>	Gateway Service name or id (required)
<code>-h, --help</code>	Help for policies:document
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic policies:get

## Synopsis

Policies get operations

```
apic policies:get [flags]
```

## Options

```

--availability-zone string      Availability Zone name or id (required)
-c, --catalog string           Catalog name or id (required)
--configured-gateway-service string  Configured Gateway Service name or id (required)
--fields string                List of field names to return (default "add(policy,implementation)")
--format string                Output format. One of [json yaml go-template=... go-template-file=...], defaults to
yaml.
--gateway-service string       Gateway Service name or id (required)
-h, --help                     Help for policies:get

--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")

```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic policies:list-all

Policies list-all operations

## Synopsis

Policies list-all operations

```
apic policies:list-all [flags]
```

## Options

```

--availability-zone string      Availability Zone name or id (required)
-c, --catalog string           Catalog name or id (required)
--configured-gateway-service string  Configured Gateway Service name or id (required)
--fields string                List of field names to return
--format string                Output format. One of [json yaml go-template=... go-template-file=...], defaults to
yaml.
--gateway-service string       Gateway Service name or id (required)
-h, --help                     Help for policies:list-all
--limit int32                  Maximum number of items to return
--offset int32                 Offset item number from list to begin return
-o, --org string               Organization name or id (required)
--output string                Write file(s) to directory, instead of STDOUT (default "-")
--scope string                 scope
-s, --server string            management server endpoint (required)
--space string                 Space name or id (required)

```

## Options inherited from parent commands

```

--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")

```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic policies:update

Policies update operations

### Synopsis

---

Policies update operations

```
apic policies:update [flags]
```

### Options

---

```
-c, --catalog string      Catalog name or id (required)
--configured-gateway-service string  Configured Gateway Service name or id (required)
--format string          Output format. One of [json yaml go-template=... go-template-file=...], defaults to
yaml.
-h, --help              Help for policies:update
--id                    id
-o, --org string        Organization name or id (required)
--output string         Write file(s) to directory, instead of STDOUT (default "-")
--scope string          scope
-s, --server string     management server endpoint (required)
--space string          Space name or id (required)
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic portal-services

Portal Services operations

### Synopsis

---

Portal Services operations

```
apic portal-services [flags]
```

### Options

---

```
--availability-zone string  Availability Zone name or id (required)
--fields string             List of field names to return
--format string            Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                 Help for portal-services
--limit int32              Maximum number of items to return
--offset int32             Offset item number from list to begin return
-o, --org string           Organization name or id (required)
--output string            Write file(s) to directory, instead of STDOUT (default "-")
--scope string             scope
-s, --server string        management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic portal-services:clear

1906 IBM API Connect 10.0.2.0 to 10.0.4.x

Clear the Portal Service objects

## Synopsis

---

Clear the Portal Service objects

```
apic portal-services:clear [flags]
```

## Options

---

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for portal-services:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic portal-services:create

Create a Portal Service object

## Synopsis

---

Create a Portal Service object

```
apic portal-services:create [flags]
```

## Options

---

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for portal-services:create
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic portal-services:delete

Delete the Portal Service object by name or id

## Synopsis

---

Delete the Portal Service object by name or id

```
apic portal-services:delete [flags]
```

## Options

---

```
--availability-zone string  Availability Zone name or id (required)
--format string             Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                 Help for portal-services:delete
-o, --org string            Organization name or id (required)
--output string             Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string         management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license           Accept the license for API Connect
--debug                    Enable debug output
--debug-output string      Write debug output to file
--live-help                Enable or disable tracking of limited usage information
-m, --mode string          Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic portal-services:get

Get the Portal Service object by name or id

## Synopsis

---

Get the Portal Service object by name or id

```
apic portal-services:get [flags]
```

## Options

---

```
--availability-zone string  Availability Zone name or id (required)
--fields string             List of field names to return
--format string             Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                 Help for portal-services:get
-o, --org string            Organization name or id (required)
--output string             Write file(s) to directory, use - for STDOUT. (default: cwd)
--scope string              scope
-s, --server string         management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license           Accept the license for API Connect
--debug                    Enable debug output
--debug-output string      Write debug output to file
--live-help                Enable or disable tracking of limited usage information
-m, --mode string          Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic portal-services:list

List the Portal Service objects

## Synopsis

---

List the Portal Service objects

```
apic portal-services:list [flags]
```

## Options

---

```
--availability-zone string  Availability Zone name or id (required)
--fields string             List of field names to return
--format string             Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                 Help for portal-services:list
--limit int32              Maximum number of items to return
--offset int32              Offset item number from list to begin return
```

<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic portal-services:update-credentials

Update the Portal Service configuration

### Synopsis

Update the Portal Service configuration

```
apic portal-services:update-credentials [flags]
```

### Options

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for portal-services:update-credentials
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic portal-services:update

Update the Portal Service object by name or id

### Synopsis

Update the Portal Service object by name or id

```
apic portal-services:update [flags]
```

### Options

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for portal-services:update
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file

```
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic primary-events

Primary Events operations

### Synopsis

Primary Events operations

```
apic primary-events [flags]
```

### Options

```
--availability-zone string    Availability Zone name or id (required)
-c, --catalog string          Catalog name or id (required)
--configured-gateway-service string    Configured Gateway Service name or id (required)
--fields string               List of field names to return
--format string                Output format. One of [json yaml go-template=... go-template-file=...], defaults to
yaml.
--gateway-service string      Gateway Service name or id (required)
-h, --help                    Help for primary-events
--limit int32                 Maximum number of items to return
--offset int32                 Offset item number from list to begin return
-o, --org string              Organization name or id (required)
--output string                Write file(s) to directory, instead of STDOUT (default "-")
--portal-service string        Portal Service name or id (required)
--scope string                 scope
-s, --server string            management server endpoint (required)
--state string                 State for a webhook event in subscriber queue
```

### Options inherited from parent commands

```
--accept-license    Accept the license for API Connect
--debug              Enable debug output
--debug-output string    Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic primary-events:get

Primary Events get operations

### Synopsis

Primary Events get operations

```
apic primary-events:get [flags]
```

### Options

```
--availability-zone string    Availability Zone name or id (required)
-c, --catalog string          Catalog name or id (required)
--configured-gateway-service string    Configured Gateway Service name or id (required)
--fields string               List of field names to return
--format string                Output format. One of [json yaml go-template=... go-template-file=...], defaults to
yaml.
--gateway-service string      Gateway Service name or id (required)
-h, --help                    Help for primary-events:get
-o, --org string              Organization name or id (required)
--output string                Write file(s) to directory, use - for STDOUT. (default: cwd)
--portal-service string        Portal Service name or id (required)
--scope string                 scope
-s, --server string            management server endpoint (required)
```

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic primary-events:list

Primary Events list operations

### Synopsis

Primary Events list operations

```
apic primary-events:list [flags]
```

### Options

<code>--availability-zone string</code>	Availability Zone name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>--gateway-service string</code>	Gateway Service name or id (required)
<code>-h, --help</code>	Help for primary-events:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--portal-service string</code>	Portal Service name or id (required)
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--state string</code>	State for a webhook event in subscriber queue

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic products

Products operations

### Synopsis

Products operations

```
apic products [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--expand string</code>	List of transient field to expand
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for products
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")

```
--scope string      scope
-s, --server string  management server endpoint (required)
--space string      Space name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic products:clear

Products clear operations

## Synopsis

---

Products clear operations

```
apic products:clear [flags]
```

## Options

---

```
-c, --catalog string  Catalog name or id (required)
--confirm string     Confirmation for critical updates (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for products:clear
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string   management server endpoint (required)
--space string       Space name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic products:clear-all

Products clear-all operations

## Synopsis

---

Products clear-all operations

```
apic products:clear-all [flags]
```

## Options

---

```
-c, --catalog string  Catalog name or id (required)
--confirm string     Confirmation for critical updates (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for products:clear-all
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string   management server endpoint (required)
--space string       Space name or id (required)
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic products:clone

Products clone operations

### Synopsis

---

Products clone operations

```
apic products:clone [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--expand string</code>	List of transient field to expand
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for products:clone
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic products:delete

Products delete operations

### Synopsis

---

Products delete operations

```
apic products:delete [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for products:delete
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic products:document

Products document operations

### Synopsis

Products document operations

```
apic products:document [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for products:document
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic products:execute-migration-target

Products execute-migration-target operations

### Synopsis

Products execute-migration-target operations

```
apic products:execute-migration-target [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for products:execute-migration-target
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic products:get

Products get operations

### Synopsis

Products get operations

```
apic products:get [flags]
```

### Options

```
-c, --catalog string  Catalog name or id (required)
--fields string      List of field names to return (default "add(product)")
--format string       Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for products:get
--id                 id
-o, --org string      Organization name or id (required)
--output string       Write file(s) to directory, use - for STDOUT. (default: cwd)
--scope string        scope
-s, --server string   management server endpoint (required)
--space string        Space name or id (required)
```

### Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic products:list

Products list operations

### Synopsis

Products list operations

```
apic products:list [flags]
```

### Options

```
-c, --catalog string  Catalog name or id (required)
--expand string       List of transient field to expand
--fields string       List of field names to return
--format string       Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for products:list
--limit int32         Maximum number of items to return
--offset int32        Offset item number from list to begin return
-o, --org string      Organization name or id (required)
--output string       Write file(s) to directory, instead of STDOUT (default "-")
--scope string        scope
-s, --server string   management server endpoint (required)
--space string        Space name or id (required)
```

### Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic products:list-all

Products list-all operations

### Synopsis

Products list-all operations

```
apic products:list-all [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--expand string</code>	List of transient field to expand
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for products:list-all
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic products:migrate-subscriptions

Products migrate-subscriptions operations

### Synopsis

Products migrate-subscriptions operations

```
apic products:migrate-subscriptions [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for products:migrate-subscriptions
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic products:publish

Publish the product

### Synopsis

---

Publish the product

```
apic products:publish [flags]
```

### Options

---

-c, --catalog string	Catalog name or id (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
--gateway_services string	The list of gateway service names to support partial publishing
-h, --help	Help for products:publish
--migrate_subscriptions	Migrate subscription when republish product
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
--scope string	scope
-s, --server string	management server endpoint (required)
--space string	Space name or id (required)
--stage	stage

### Options inherited from parent commands

---

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic products:replace

Products replace operations

### Synopsis

---

Products replace operations

```
apic products:replace [flags]
```

### Options

---

-c, --catalog string	Catalog name or id (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for products:replace
--id	id
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
--scope string	scope
-s, --server string	management server endpoint (required)
--space string	Space name or id (required)

### Options inherited from parent commands

---

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic products:set-migration-target

Products set-migration-target operations

### Synopsis

---

Products set-migration-target operations

```
apic products:set-migration-target [flags]
```

### Options

---

```
-c, --catalog string  Catalog name or id (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for products:set-migration-target
--id                 id
-o, --org string     Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--space string       Space name or id (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic products:supersede

Products supersede operations

### Synopsis

---

Products supersede operations

```
apic products:supersede [flags]
```

### Options

---

```
-c, --catalog string  Catalog name or id (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for products:supersede
--id                 id
-o, --org string     Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--space string       Space name or id (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic products:update

## Synopsis

Products update operations

```
apic products:update [flags]
```

## Options

```
-c, --catalog string  Catalog name or id (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for products:update
--id                 id
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--space string       Space name or id (required)
```

## Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic properties

Properties operations

## Synopsis

Properties operations

```
apic properties [flags]
```

## Options

```
-c, --catalog string  Catalog name or id (required)
--fields string      List of field names to return
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for properties
--limit int32        Maximum number of items to return
--offset int32       Offset item number from list to begin return
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
```

## Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic properties:clear

Properties clear operations

## Synopsis

Properties clear operations

```
apic properties:clear [flags]
```

## Options

---

```
-c, --catalog string    Catalog name or id (required)
--confirm string       Confirmation for critical updates (required)
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for properties:clear
-o, --org string       Organization name or id (required)
--output string        Write file(s) to directory, instead of STDOUT (default "-")
--scope string         scope
-s, --server string    management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic properties:create

Properties create operations

## Synopsis

---

Properties create operations

```
apic properties:create [flags]
```

## Options

---

```
-c, --catalog string    Catalog name or id (required)
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for properties:create
-o, --org string       Organization name or id (required)
--output string        Write file(s) to directory, instead of STDOUT (default "-")
--scope string         scope
-s, --server string    management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic properties:delete

Properties delete operations

## Synopsis

---

Properties delete operations

```
apic properties:delete [flags]
```

## Options

---

-c, --catalog string	Catalog name or id (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for properties:delete
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
--scope string	scope
-s, --server string	management server endpoint (required)

## Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic properties:get

Properties get operations

### Synopsis

Properties get operations

```
apic properties:get [flags]
```

### Options

-c, --catalog string	Catalog name or id (required)
--fields string	List of field names to return
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for properties:get
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, use - for STDOUT. (default: cwd)
--scope string	scope
-s, --server string	management server endpoint (required)

## Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic properties:list

Properties list operations

### Synopsis

Properties list operations

```
apic properties:list [flags]
```

### Options

-c, --catalog string	Catalog name or id (required)
--fields string	List of field names to return
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for properties:list
--limit int32	Maximum number of items to return
--offset int32	Offset item number from list to begin return
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")

```
--scope string      scope
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic properties:update

Properties update operations

### Synopsis

---

Properties update operations

```
apic properties:update [flags]
```

### Options

---

```
-c, --catalog string  Catalog name or id (required)
--format string       Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help            Help for properties:update
-o, --org string      Organization name or id (required)
--output string       Write file(s) to directory, instead of STDOUT (default "-")
--scope string        scope
-s, --server string   management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic registrations

Registrations operations

### Synopsis

---

Registrations operations

```
apic registrations [flags]
```

### Options

---

```
--fields string      List of field names to return
--format string       Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help            Help for registrations
--limit int32        Maximum number of items to return
--offset int32       Offset item number from list to begin return
--output string       Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string   management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string Write debug output to file
```

--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic registrations:clear

Clear the Registration objects

### Synopsis

Clear the Registration objects

```
apic registrations:clear [flags]
```

### Options

--confirm string	Confirmation for critical updates (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for registrations:clear
--output string	Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string	management server endpoint (required)

### Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic registrations:create

Create a Registration object

### Synopsis

Create a Registration object

```
apic registrations:create [flags]
```

### Options

--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for registrations:create
--output string	Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string	management server endpoint (required)

### Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic registrations:delete

Delete the Registration object by name or id

## Synopsis

---

Delete the Registration object by name or id

```
apic registrations:delete [flags]
```

## Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for registrations:delete
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic registrations:get

Get the Registration object by name or id

## Synopsis

---

Get the Registration object by name or id

```
apic registrations:get [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for registrations:get
--output string  Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic registrations:list

List the Registration objects

## Synopsis

---

List the Registration objects

```
apic registrations:list [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
```

```

-h, --help           Help for registrations:list
--limit int32       Maximum number of items to return
--offset int32      Offset item number from list to begin return
--output string     Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)

```

## Options inherited from parent commands

```

--accept-license    Accept the license for API Connect
--debug            Enable debug output
--debug-output string Write debug output to file
--live-help        Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")

```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic registrations:update

Update the Registration object by name or id

### Synopsis

Update the Registration object by name or id

```
apic registrations:update [flags]
```

### Options

```

--format string     Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help         Help for registrations:update
--output string     Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)

```

## Options inherited from parent commands

```

--accept-license    Accept the license for API Connect
--debug            Enable debug output
--debug-output string Write debug output to file
--live-help        Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")

```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic role-defaults

Role Defaults operations

### Synopsis

Role Defaults operations

```
apic role-defaults [flags]
```

### Options

```

-c, --catalog string Catalog name or id (required)
--fields string      List of field names to return
--format string     Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help         Help for role-defaults
--limit int32       Maximum number of items to return
--offset int32      Offset item number from list to begin return
-o, --org string     Organization name or id (required)
--output string     Write file(s) to directory, instead of STDOUT (default "-")
--scope string      scope
-s, --server string management server endpoint (required)
--space string      Space name or id (required)

```

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic role-defaults:clear

Role Defaults clear operations

### Synopsis

Role Defaults clear operations

```
apic role-defaults:clear [flags]
```

### Options

<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for role-defaults:clear
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--subcollection string</code>	subcollection

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic role-defaults:create

Role Defaults create operations

### Synopsis

Role Defaults create operations

```
apic role-defaults:create [flags]
```

### Options

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for role-defaults:create
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--subcollection string</code>	subcollection

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic role-defaults:delete

Role Defaults delete operations

### Synopsis

---

Role Defaults delete operations

```
apic role-defaults:delete [flags]
```

### Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for role-defaults:delete
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--subcollection string</code>	subcollection

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic role-defaults:get

Role Defaults get operations

### Synopsis

---

Role Defaults get operations

```
apic role-defaults:get [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for role-defaults:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--subcollection string</code>	subcollection

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic role-defaults:list

## Synopsis

Role Defaults list operations

```
apic role-defaults:list [flags]
```

## Options

```
-c, --catalog string      Catalog name or id (required)
--fields string          List of field names to return
--format string           Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                Help for role-defaults:list
--limit int32            Maximum number of items to return
--offset int32           Offset item number from list to begin return
-o, --org string          Organization name or id (required)
--output string           Write file(s) to directory, instead of STDOUT (default "-")
--scope string            scope
-s, --server string       management server endpoint (required)
--space string            Space name or id (required)
--subcollection string    subcollection
```

## Options inherited from parent commands

```
--accept-license        Accept the license for API Connect
--debug                 Enable debug output
--debug-output string   Write debug output to file
--live-help              Enable or disable tracking of limited usage information
-m, --mode string        Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic role-defaults:list-all

Role Defaults list-all operations

## Synopsis

Role Defaults list-all operations

```
apic role-defaults:list-all [flags]
```

## Options

```
-c, --catalog string      Catalog name or id (required)
--fields string          List of field names to return
--format string           Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help                Help for role-defaults:list-all
--limit int32            Maximum number of items to return
--offset int32           Offset item number from list to begin return
-o, --org string          Organization name or id (required)
--output string           Write file(s) to directory, instead of STDOUT (default "-")
--scope string            scope
-s, --server string       management server endpoint (required)
--space string            Space name or id (required)
```

## Options inherited from parent commands

```
--accept-license        Accept the license for API Connect
--debug                 Enable debug output
--debug-output string   Write debug output to file
--live-help              Enable or disable tracking of limited usage information
-m, --mode string        Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic role-defaults:update

## Synopsis

Role Defaults update operations

```
apic role-defaults:update [flags]
```

## Options

```
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for role-defaults:update
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--subcollection string subcollection
```

## Options inherited from parent commands

```
--accept-license     Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic roles

Roles operations

## Synopsis

Roles operations

```
apic roles [flags]
```

## Options

```
-c, --catalog string      Catalog name or id (required)
--consumer-org string    Consumer Organization name or id (required)
--fields string          List of field names to return
--format string          Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help               Help for roles
--limit int32            Maximum number of items to return
--offset int32           Offset item number from list to begin return
-o, --org string         Organization name or id (required)
--output string          Write file(s) to directory, instead of STDOUT (default "-")
--scope string           scope
-s, --server string      management server endpoint (required)

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic roles:delete

Roles delete operations

## Synopsis

---

Roles delete operations

```
apic roles:delete [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for roles:delete
<code>-o, --org string</code>	Organization name or id (required)

```
--output string Write file(s) to directory, instead of STDOUT (default "-")
--scope string scope
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic roles:get

Roles get operations

## Synopsis

---

Roles get operations

```
apic roles:get [flags]
```

## Options

---

```
-c, --catalog string Catalog name or id (required)
--consumer-org string Consumer Organization name or id (required)
--fields string List of field names to return
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for roles:get
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, use - for STDOUT. (default: cwd)
--scope string scope
-s, --server string management server endpoint (required)
--space string Space name or id (required)
--space-initiated space-initiated
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

-h, --help              Help for roles:update
-o, --org string        Organization name or id (required)
--output string         Write file(s) to directory, instead of STDOUT (default "-")
--scope string          scope
-s, --server string     management server endpoint (required)
--space string          Space name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license        Accept the license for API Connect
--debug                 Enable debug output
--debug-output string   Write debug output to file
--live-help             Enable or disable tracking of limited usage information
-m, --mode string       Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic services

Services operations

### Synopsis

---

Services operations

```
apic services [flags]
```

### Options

---

```
-c, --catalog string    Catalog name or id (required)
--configured-gateway-service string Configured Gateway Service name or id (required)
--fields string         List of field names to return
--format string         Output format. One of [json yaml go-template=... go-template-file=...], defaults to
yaml.
-h, --help              Help for services
--limit int32           Maximum number of items to return
--offset int32          Offset item number from list to begin return
-o, --org string        Organization name or id (required)
--output string         Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string     management server endpoint (required)
--space string          Space name or id (required)
--space-initiated       space-initiated
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic services:clear

Services clear operations

### Synopsis

---

Services clear operations

```
apic services:clear [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for services:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic services:clear-all

Services clear-all operations

### Synopsis

---

Services clear-all operations

```
apic services:clear-all [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for services:clear-all
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic services:create

Services create operations

### Synopsis

---

Services create operations

```
apic services:create [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for services:create
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic services:delete

Services delete operations

### Synopsis

---

Services delete operations

```
apic services:delete [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for services:delete
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic services:get

Services get operations

### Synopsis

Services get operations

```
apic services:get [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for services:get
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic services:list

Services list operations

### Synopsis

Services list operations

```
apic services:list [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for services:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic services:list-all

Services list-all operations

### Synopsis

Services list-all operations

```
apic services:list-all [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for services:list-all
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic services:update

Services update operations

### Synopsis

Services update operations

```
apic services:update [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--configured-gateway-service string</code>	Configured Gateway Service name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for services:update
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic space-settings

Space Settings operations

### Synopsis

Space Settings operations

```
apic space-settings [flags]
```

### Options

```
-h, --help Help for space-settings
```

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic space-settings:get

Get the Space Setting object

### Synopsis

Get the Space Setting object

```
apic space-settings:get [flags]
```

### Options

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for space-settings:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic space-settings:update

Update the Space Setting object

### Synopsis

---

Update the Space Setting object

```
apic space-settings:update [flags]
```

### Options

---

```
-c, --catalog string  Catalog name or id (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for space-settings:update
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string   management server endpoint (required)
--space string       Space name or id (required)
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic spaces

Spaces operations

### Synopsis

---

Spaces operations

```
apic spaces [flags]
```

### Options

---

```
-c, --catalog string  Catalog name or id (required)
--fields string      List of field names to return
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for spaces
--limit int32        Maximum number of items to return
--my                 my
--offset int32       Offset item number from list to begin return
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string   management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic spaces:clear

Clear the Space objects

## Synopsis

---

Clear the Space objects

```
apic spaces:clear [flags]
```

## Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for spaces:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic spaces:create

Create a Space object

## Synopsis

---

Create a Space object

```
apic spaces:create [flags]
```

## Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for spaces:create
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic spaces:delete

Delete the Space object by name or id

## Synopsis

---

Delete the Space object by name or id

```
apic spaces:delete [flags]
```

## Options

---

-c, --catalog string	Catalog name or id (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for spaces:delete
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string	management server endpoint (required)

## Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic spaces:email-to-owners

Send email to owners of consumer organizations

### Synopsis

Send email to owners of consumer organizations, given consumer org and consumer group urls. For consumer group, email owners of all consumer orgs in the group.

```
apic spaces:email-to-owners [flags]
```

### Options

-c, --catalog string	Catalog name or id (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for spaces:email-to-owners
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string	management server endpoint (required)

## Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic spaces:get

Get the Space object by name or id

### Synopsis

Get the Space object by name or id

```
apic spaces:get [flags]
```

### Options

-c, --catalog string	Catalog name or id (required)
--fields string	List of field names to return
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for spaces:get
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string	management server endpoint (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic spaces:list

List the Space objects

### Synopsis

---

List the Space objects

```
apic spaces:list [flags]
```

### Options

---

<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for spaces:list
<code>--limit int32</code>	Maximum number of items to return
<code>--my</code>	my
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic spaces:transfer-owner

Transfer owner to an associate

### Synopsis

---

Transfer owner to an associate

```
apic spaces:transfer-owner [flags]
```

### Options

---

<code>--cascade</code>	Cascade the behavior
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for spaces:transfer-owner
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic spaces:update

Update the Space object by name or id

### Synopsis

Update the Space object by name or id

```
apic spaces:update [flags]
```

### Options

```
-c, --catalog string  Catalog name or id (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for spaces:update
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string  management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic subscriber-events

Subscriber Events operations

### Synopsis

Subscriber Events operations

```
apic subscriber-events [flags]
```

### Options

```
-c, --catalog string  Catalog name or id (required)
--fields string      List of field names to return
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for subscriber-events
--limit int32        Maximum number of items to return
--offset int32       Offset item number from list to begin return
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--state string       State for a webhook event in subscriber queue
--webhook string     Webhook name or id (required)
```

### Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic subscriber-events:get

Subscriber Events get operations

### Synopsis

---

Subscriber Events get operations

```
apic subscriber-events:get [flags]
```

### Options

---

```
-c, --catalog string  Catalog name or id (required)
--fields string      List of field names to return
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for subscriber-events:get
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, use - for STDOUT. (default: cwd)
--scope string       scope
-s, --server string  management server endpoint (required)
--webhook string     Webhook name or id (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic subscriber-events:list

Subscriber Events list operations

### Synopsis

---

Subscriber Events list operations

```
apic subscriber-events:list [flags]
```

### Options

---

```
-c, --catalog string  Catalog name or id (required)
--fields string      List of field names to return
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for subscriber-events:list
--limit int32        Maximum number of items to return
--offset int32       Offset item number from list to begin return
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--state string       State for a webhook event in subscriber queue
--webhook string     Webhook name or id (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic subscriptions

## Synopsis

Subscriptions operations

```
apic subscriptions [flags]
```

## Options

```
-a, --app string      Application name or id (required)
-c, --catalog string  Catalog name or id (required)
  --consumer-org string Consumer Organization name or id (required)
  --consumer_org_url string Consumer Org Url
  --expand string     List of transient field to expand
  --fields string     List of field names to return
  --format string     Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for subscriptions
  --limit int32       Maximum number of items to return
  --offset int32      Offset item number from list to begin return
-o, --org string      Organization name or id (required)
  --output string     Write file(s) to directory, instead of STDOUT (default "-")
  --plan string       Plan Name
  --product_url string Product Url
  --scope string      scope
-s, --server string   management server endpoint (required)
  --space string      Space name or id (required)
  --space-initiated  space-initiated
```

## Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic subscriptions:clear

Clear the Subscription objects

## Synopsis

Clear the Subscription objects

```
apic subscriptions:clear [flags]
```

## Options

```
-a, --app string      Application name or id (required)
-c, --catalog string  Catalog name or id (required)
  --confirm string    Confirmation for critical updates (required)
  --consumer-org string Consumer Organization name or id (required)
  --format string     Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for subscriptions:clear
-o, --org string      Organization name or id (required)
  --output string     Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string   management server endpoint (required)
  --space string      Space name or id (required)
  --space-initiated  space-initiated
```

## Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic subscriptions:create

Create a Subscription object

### Synopsis

---

Create a Subscription object

```
apic subscriptions:create [flags]
```

### Options

---

-a, --app string	Application name or id (required)
-c, --catalog string	Catalog name or id (required)
--consumer-org string	Consumer Organization name or id (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for subscriptions:create
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string	management server endpoint (required)
--space string	Space name or id (required)
--space-initiated	space-initiated

### Options inherited from parent commands

---

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic subscriptions:delete

Delete the Subscription object by name or id

### Synopsis

---

Delete the Subscription object by name or id

```
apic subscriptions:delete [flags]
```

### Options

---

-a, --app string	Application name or id (required)
-c, --catalog string	Catalog name or id (required)
--consumer-org string	Consumer Organization name or id (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for subscriptions:delete
-o, --org string	Organization name or id (required)
--output string	Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string	management server endpoint (required)
--space string	Space name or id (required)
--space-initiated	space-initiated

### Options inherited from parent commands

---

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic subscriptions:get

Get the Subscription object by name or id

## Synopsis

---

Get the Subscription object by name or id

```
apic subscriptions:get [flags]
```

## Options

---

<code>-a, --app string</code>	Application name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for subscriptions:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic subscriptions:list

List the Subscription objects

## Synopsis

---

List the Subscription objects

```
apic subscriptions:list [flags]
```

## Options

---

<code>-a, --app string</code>	Application name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--consumer_org_url string</code>	Consumer Org Url
<code>--expand string</code>	List of transient field to expand
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for subscriptions:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--plan string</code>	Plan Name
<code>--product_url string</code>	Product Url
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic subscriptions:update

Update the Subscription object by name or id

### Synopsis

---

Update the Subscription object by name or id

```
apic subscriptions:update [flags]
```

### Options

---

<code>-a, --app string</code>	Application name or id (required)
<code>-c, --catalog string</code>	Catalog name or id (required)
<code>--consumer-org string</code>	Consumer Organization name or id (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for subscriptions:update
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--space string</code>	Space name or id (required)
<code>--space-initiated</code>	space-initiated

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic task-queues

Task Queues operations

### Synopsis

---

Task Queues operations

```
apic task-queues [flags]
```

### Options

---

<code>--apply_filter</code>	Filter tasks
<code>--cascade</code>	Cascade the behavior
<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for task-queues
<code>--kind string</code>	kind of item
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>--query string</code>	Add query to request
<code>--scope string</code>	scope
<code>-s, --server string</code>	management server endpoint (required)
<code>--state string</code>	State for a webhook event in subscriber queue
<code>--target string</code>	target for the task

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic task-queues:get

Task Queues get operations

### Synopsis

---

Task Queues get operations

```
apic task-queues:get [flags]
```

### Options

---

```
--cascade           Cascade the behavior
--fields string     List of field names to return
--format string     Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help         Help for task-queues:get
--kind string       kind of item
--output string     Write file(s) to directory, use - for STDOUT. (default: cwd)
--query string      Add query to request
--scope string      scope
-s, --server string management server endpoint (required)
--state string      State for a webhook event in subscriber queue
```

### Options inherited from parent commands

---

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic task-queues:list

Task Queues list operations

### Synopsis

---

Task Queues list operations

```
apic task-queues:list [flags]
```

### Options

---

```
--apply-filter      Filter tasks
--cascade           Cascade the behavior
--fields string     List of field names to return
--format string     Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help         Help for task-queues:list
--kind string       kind of item
--limit int32       Maximum number of items to return
--offset int32      Offset item number from list to begin return
--output string     Write file(s) to directory, instead of STDOUT (default "-")
--query string      Add query to request
--scope string      scope
-s, --server string management server endpoint (required)
--state string      State for a webhook event in subscriber queue
--target string     target for the task
```

### Options inherited from parent commands

---

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic tasks

Tasks operations

### Synopsis

---

Tasks operations

```
apic tasks [flags]
```

### Options

---

```
-c, --catalog string  Catalog name or id (required)
--fields string      List of field names to return
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for tasks
--limit int32        Maximum number of items to return
--my                 my
--offset int32       Offset item number from list to begin return
-o, --org string     Organization name or id (required)
--originated         originated
--output string      Write file(s) to directory, instead of STDOUT (default "-")
--scope string       scope
-s, --server string  management server endpoint (required)
--space string       Space name or id (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic tasks:update

Tasks update operations

### Synopsis

---

Tasks update operations

```
apic tasks:update [flags]
```

### Options

---

```
-c, --catalog string    Catalog name or id (required)
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for tasks:update
-o, --org string       Organization name or id (required)
--output string       Write file(s) to directory, instead of STDOUT (default "-")
--scope string        scope
-s, --server string    management server endpoint (required)
--space string        Space name or id (required)
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic tls-client-profiles

## Synopsis

Tls Client Profiles operations

```
apic tls-client-profiles [flags]
```

## Options

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for tls-client-profiles
--limit int32   Maximum number of items to return
--offset int32  Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help      Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic tls-client-profiles:clear

Clear the TLS Client Profile objects

## Synopsis

Clear the TLS Client Profile objects

```
apic tls-client-profiles:clear [flags]
```

## Options

```
--confirm string Confirmation for critical updates (required)
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for tls-client-profiles:clear
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help      Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic tls-client-profiles:clear-all

Clear all TLS Client Profile objects in all collections

## Synopsis

Clear all TLS Client Profile objects in all collections

```
apic tls-client-profiles:clear-all [flags]
```

## Options

---

<code>--cascade</code>	Cascade the behavior
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for <code>tls-client-profiles:clear-all</code>
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic tls-client-profiles:create

Create a TLS Client Profile object

## Synopsis

---

Create a TLS Client Profile object

```
apic tls-client-profiles:create [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for <code>tls-client-profiles:create</code>
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic tls-client-profiles:delete

Delete a TLS Client Profile

## Synopsis

---

Delete a TLS Client Profile

```
apic tls-client-profiles:delete [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for <code>tls-client-profiles:delete</code>
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic tls-client-profiles:get

Get the TLS Client Profile object by name and version

### Synopsis

---

Get the TLS Client Profile object by name and version

```
apic tls-client-profiles:get [flags]
```

### Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for tls-client-profiles:get
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic tls-client-profiles:list

List the TLS Client Profile objects

### Synopsis

---

List the TLS Client Profile objects

```
apic tls-client-profiles:list [flags]
```

### Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for tls-client-profiles:list
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic tls-client-profiles:list-all

List all TLS Client Profile objects in all collections

### Synopsis

---

List all TLS Client Profile objects in all collections

```
apic tls-client-profiles:list-all [flags]
```

### Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for tls-client-profiles:list-all
--limit int32   Maximum number of items to return
--offset int32  Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic tls-client-profiles:update

Update the TLS Client Profile object by name and version

### Synopsis

---

Update the TLS Client Profile object by name and version

```
apic tls-client-profiles:update [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for tls-client-profiles:update
--id            id
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic tls-server-profiles

Tls Server Profiles operations

### Synopsis

---

Tls Server Profiles operations

```
apic tls-server-profiles [flags]
```

### Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for tls-server-profiles
--limit int32    Maximum number of items to return
--offset int32   Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic tls-server-profiles:clear

Clear the TLS Server Profile objects

### Synopsis

---

Clear the TLS Server Profile objects

```
apic tls-server-profiles:clear [flags]
```

### Options

---

```
--cascade        Cascade the behavior
--confirm string Confirmation for critical updates (required)
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for tls-server-profiles:clear
-o, --org string Organization name or id (required)
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic tls-server-profiles:clear-all

Clear all TLS Server Profile objects in all collections

## Synopsis

---

Clear all TLS Server Profile objects in all collections

```
apic tls-server-profiles:clear-all [flags]
```

## Options

---

<code>--cascade</code>	Cascade the behavior
<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for <code>tls-server-profiles:clear-all</code>
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic tls-server-profiles:create

Create a TLS Server Profile object

## Synopsis

---

Create a TLS Server Profile object

```
apic tls-server-profiles:create [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for <code>tls-server-profiles:create</code>
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic tls-server-profiles:delete

Delete a TLS Server Profile

## Synopsis

---

Delete a TLS Server Profile

```
apic tls-server-profiles:delete [flags]
```

## Options

---

<code>--cascade</code>	Cascade the behavior
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for <code>tls-server-profiles:delete</code>
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic tls-server-profiles:get

Get the TLS Server Profile object by name and version

### Synopsis

Get the TLS Server Profile object by name and version

```
apic tls-server-profiles:get [flags]
```

### Options

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for <code>tls-server-profiles:get</code>
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic tls-server-profiles:list

List the TLS Server Profile objects

### Synopsis

List the TLS Server Profile objects

```
apic tls-server-profiles:list [flags]
```

### Options

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for <code>tls-server-profiles:list</code>
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic tls-server-profiles:list-all

List all TLS Server Profile objects in all collections

### Synopsis

---

List all TLS Server Profile objects in all collections

```
apic tls-server-profiles:list-all [flags]
```

### Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for tls-server-profiles:list-all
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic tls-server-profiles:update

Update the TLS Server Profile object by name and version

### Synopsis

---

Update the TLS Server Profile object by name and version

```
apic tls-server-profiles:update [flags]
```

### Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for tls-server-profiles:update
<code>--id</code>	id
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic truststores

Truststores operations

### Synopsis

---

Truststores operations

```
apic truststores [flags]
```

### Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for truststores
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic truststores:clear

Clear the Truststore objects

### Synopsis

---

Clear the Truststore objects

```
apic truststores:clear [flags]
```

### Options

---

<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for truststores:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic truststores:create

Create a Truststore object

### Synopsis

---

Create a Truststore object

```
apic truststores:create [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for truststores:create
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug          Enable debug output
--debug-output string Write debug output to file
--live-help     Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic truststores:delete

Delete the Truststore object by name or id

### Synopsis

---

Delete the Truststore object by name or id

```
apic truststores:delete [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for truststores:delete
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug          Enable debug output
--debug-output string Write debug output to file
--live-help     Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic truststores:get

Get the Truststore object by name or id

### Synopsis

---

Get the Truststore object by name or id

```
apic truststores:get [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for truststores:get
-o, --org string  Organization name or id (required)
--output string  Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic truststores:list

List the Truststore objects

## Synopsis

---

List the Truststore objects

```
apic truststores:list [flags]
```

## Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for truststores:list
--limit int32    Maximum number of items to return
--offset int32   Offset item number from list to begin return
-o, --org string  Organization name or id (required)
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic truststores:update

Update the Truststore object by name or id

## Synopsis

---

Update the Truststore object by name or id

```
apic truststores:update [flags]
```

## Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for truststores:update
-o, --org string  Organization name or id (required)
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic user-registries

User Registries operations

### Synopsis

---

User Registries operations

```
apic user-registries [flags]
```

### Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for user-registries
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic user-registries:clear

Clear the User Registry objects

### Synopsis

---

Clear the User Registry objects

```
apic user-registries:clear [flags]
```

### Options

---

<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for user-registries:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic user-registries:create

Create a User Registry object

### Synopsis

---

Create a User Registry object

```
apic user-registries:create [flags]
```

### Options

---

<code>--format</code>	string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h</code> , <code>--help</code>		Help for user-registries:create
<code>-o</code> , <code>--org</code>	string	Organization name or id (required)
<code>--output</code>	string	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s</code> , <code>--server</code>	string	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>		Accept the license for API Connect
<code>--debug</code>		Enable debug output
<code>--debug-output</code>	string	Write debug output to file
<code>--live-help</code>		Enable or disable tracking of limited usage information
<code>-m</code> , <code>--mode</code>	string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic user-registries:delete

Delete the User Registry object by name or id

### Synopsis

---

Delete the User Registry object by name or id

```
apic user-registries:delete [flags]
```

### Options

---

<code>--format</code>	string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h</code> , <code>--help</code>		Help for user-registries:delete
<code>-o</code> , <code>--org</code>	string	Organization name or id (required)
<code>--output</code>	string	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s</code> , <code>--server</code>	string	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>		Accept the license for API Connect
<code>--debug</code>		Enable debug output
<code>--debug-output</code>	string	Write debug output to file
<code>--live-help</code>		Enable or disable tracking of limited usage information
<code>-m</code> , <code>--mode</code>	string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic user-registries:execute

Execute a User Registry operation

## Synopsis

---

Execute a User Registry operation

```
apic user-registries:execute [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for user-registries:execute
<code>--operation string</code>	Operation to perform on the user registry (get_base_dn_list, validate_password) (required)
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--test-config-only</code>	test-config-only

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic user-registries:get

Get the User Registry object by name or id

## Synopsis

---

Get the User Registry object by name or id

```
apic user-registries:get [flags]
```

## Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for user-registries:get
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, use - for STDOUT. (default: cwd)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic user-registries:list

List the User Registry objects

## Synopsis

---

List the User Registry objects

```
apic user-registries:list [flags]
```

## Options

---

```
--fields string    List of field names to return
--format string   Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help        Help for user-registries:list
--limit int32     Maximum number of items to return
--offset int32    Offset item number from list to begin return
-o, --org string  Organization name or id (required)
--output string   Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic user-registries:search

Search for users in the user registry

### Synopsis

---

Search for users in the user registry

```
apic user-registries:search [flags]
```

### Options

---

```
--format string    Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help        Help for user-registries:search
--limit int32     Maximum number of items to return
--offset int32    Offset item number from list to begin return
-o, --org string  Organization name or id (required)
--output string   Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic user-registries:test-connection

Test a User Registry connection

### Synopsis

---

Test a User Registry connection

```
apic user-registries:test-connection [flags]
```

### Options

---

```
--format string    Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help        Help for user-registries:test-connection
-o, --org string  Organization name or id (required)
--output string   Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
--test-config-only test-config-only
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic user-registries:update

Update the User Registry object by name or id

### Synopsis

---

Update the User Registry object by name or id

```
apic user-registries:update [flags]
```

### Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for user-registries:update
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic user-registry-settings

User Registry Settings operations

### Synopsis

---

User Registry Settings operations

```
apic user-registry-settings [flags]
```

### Options

---

```
-h, --help Help for user-registry-settings
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic user-registry-settings:get

Get the User Registry Setting object

### Synopsis

---

Get the User Registry Setting object

```
apic user-registry-settings:get [flags]
```

### Options

---

```
--fields string  List of field names to return
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for user-registry-settings:get
--output string  Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic user-registry-settings:update

Update the User Registry Setting object

### Synopsis

---

Update the User Registry Setting object

```
apic user-registry-settings:update [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for user-registry-settings:update
--output string  Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic users

Users operations

### Synopsis

---

Users operations

```
apic users [flags]
```

## Options

---

<code>--fields string</code>	List of field names to return
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for users
<code>--limit int32</code>	Maximum number of items to return
<code>--offset int32</code>	Offset item number from list to begin return
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--user-registry string</code>	User Registry name or id (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic users:clear

Clear the User objects

## Synopsis

---

Clear the User objects

```
apic users:clear [flags]
```

## Options

---

<code>--confirm string</code>	Confirmation for critical updates (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for users:clear
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")
<code>-s, --server string</code>	management server endpoint (required)
<code>--user-registry string</code>	User Registry name or id (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic users:create

Create a User object

## Synopsis

---

Create a User object

```
apic users:create [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for users:create
<code>-o, --org string</code>	Organization name or id (required)
<code>--output string</code>	Write file(s) to directory, instead of STDOUT (default "-")

```
-s, --server string      management server endpoint (required)
--user-registry string  User Registry name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic users:delete

Delete the User object by name or id

## Synopsis

---

Delete the User object by name or id

```
apic users:delete [flags]
```

## Options

---

```
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for users:delete
-o, --org string      Organization name or id (required)
--output string       Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string   management server endpoint (required)
--user-registry string User Registry name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic users:get

Get the User object by name or id

## Synopsis

---

Get the User object by name or id

```
apic users:get [flags]
```

## Options

---

```
--fields string      List of field names to return
--format string       Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for users:get
-o, --org string      Organization name or id (required)
--output string       Write file(s) to directory, use - for STDOUT. (default: cwd)
-s, --server string   management server endpoint (required)
--user-registry string User Registry name or id (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
```

```
--live-help      Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic users:list

List the User objects

### Synopsis

List the User objects

```
apic users:list [flags]
```

### Options

```
--fields string      List of field names to return
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for users:list
--limit int32        Maximum number of items to return
--offset int32       Offset item number from list to begin return
-o, --org string      Organization name or id (required)
--output string      Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string  management server endpoint (required)
--user-registry string User Registry name or id (required)
```

### Options inherited from parent commands

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic users:request-password-reset

Send reset password link

### Synopsis

Send reset password link

```
apic users:request-password-reset [flags]
```

### Options

```
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for users:request-password-reset
--output string      Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string  management server endpoint (required)
```

### Options inherited from parent commands

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string   Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic users:search-provider

Users search-provider operations

### Synopsis

---

Users search-provider operations

```
apic users:search-provider [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for users:search-provider
--limit int32   Maximum number of items to return
--offset int32  Offset item number from list to begin return
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
--scope string  scope
-s, --server string management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help      Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic users:update

Update the User object by name or id

### Synopsis

---

Update the User object by name or id

```
apic users:update [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help      Help for users:update
-o, --org string Organization name or id (required)
--output string Write file(s) to directory, instead of STDOUT (default "-")
-s, --server string management server endpoint (required)
--user-registry string User Registry name or id (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help      Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic validate

Validate an API or product definition

### Synopsis

---

Validate an API or product definition

```
apic validate [FILE] [flags]
```

## Examples

---

```
Validate an API definition
$ apic validate routes.yaml
Validated routes.yaml API definition [routes:1.0]
Validate an API definition without IBM extensions
$ apic validate --no-extensions routes.yaml
Validated routes.yaml API definition [routes:1.0]
Validate a product definition and its referenced APIs
$ apic validate climb-on.yaml
Validated climb-on.yaml product definition [climb-on:1.0.0]
Validated routes.yaml API definition [valid:1.0]
Validate a product definition without validating its referenced APIs
$ apic validate --product-only climb-on.yaml
Validated climb-on.yaml product definition [climb-on:1.0.0]
```

## Options

---

```
-h, --help          Help for validate
--no-extensions    for API definitions, do not validate against IBM Swagger extensions
-p, --product-only for products definitions, do not validate referenced APIs
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic version

Get the APIConnect toolkit version

## Synopsis

---

Get the APIConnect toolkit version

```
apic version [flags]
```

## Options

---

```
-h, --help  Help for version
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic webhooks

Webhooks operations

## Synopsis

---

Webhooks operations

apic webhooks [flags]

## Options

---

```
-c, --catalog string    Catalog name or id (required)
--fields string        List of field names to return
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for webhooks
--limit int32         Maximum number of items to return
--offset int32        Offset item number from list to begin return
-o, --org string       Organization name or id (required)
--output string       Write file(s) to directory, instead of STDOUT (default "-")
--scope string        scope
-s, --server string    management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic webhooks:get

Webhooks get operations

## Synopsis

---

Webhooks get operations

apic webhooks:get [flags]

## Options

---

```
-c, --catalog string    Catalog name or id (required)
--fields string        List of field names to return
--format string        Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help             Help for webhooks:get
-o, --org string       Organization name or id (required)
--output string       Write file(s) to directory, use - for STDOUT. (default: cwd)
--scope string        scope
-s, --server string    management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic webhooks:list

Webhooks list operations

## Synopsis

---

Webhooks list operations

apic webhooks:list [flags]

## Options

---

```

-c, --catalog string    Catalog name or id (required)
--fields string        List of field names to return
--format string         Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help              Help for webhooks:list
--limit int32          Maximum number of items to return
--offset int32         Offset item number from list to begin return
-o, --org string        Organization name or id (required)
--output string         Write file(s) to directory, instead of STDOUT (default "-")
--scope string          scope
-s, --server string     management server endpoint (required)

```

## Options inherited from parent commands

---

```

--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")

```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic webhooks:update

Webhooks update operations

### Synopsis

---

Webhooks update operations

```
apic webhooks:update [flags]
```

### Options

---

```

-c, --catalog string    Catalog name or id (required)
--format string         Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help              Help for webhooks:update
--org string            Organization name or id (required)
--output string         Write file(s) to directory, instead of STDOUT (default "-")
--scope string          scope
-s, --server string     management server endpoint (required)

```

## Options inherited from parent commands

---

```

--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")

```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic wsdl

Manage WSDL files

### Synopsis

---

Manage WSDL files

```
apic wsdl WSDL_FILE [flags]
```

### Options

---

```
-h, --help Help for wsdl
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic wsdl:introspect

Introspect a WSDL file displaying all its services

### Synopsis

---

Introspect a WSDL file displaying all its services

```
apic wsdl:introspect WSDL_FILE [flags]
```

### Options

---

```
-h, --help Help for wsdl:introspect
```

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic

APIConnect toolkit 61bd16316ae32e02b6cd8e72d4b18e02560de16f (Built 2020-09-23T09:51:50Z)

### Synopsis

---

APIConnect toolkit 61bd16316ae32e02b6cd8e72d4b18e02560de16f (Built 2020-09-23T09:51:50Z)

```
apic [flags]
```

### Options

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>-h, --help</code>	Help for apic
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic api

Api operations

### Synopsis

---

Api operations

```
apic api --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for api
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic api:get

Get a specific api from a developer portal.

## Synopsis

---

Get a specific api from the developer portal of the provided org and catalog. The id or name:version of a specific api needs to be provided. e.g. 'id-of-api-called-example-3' or 'example:3.0.0'.

```
apic api:get --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for api:get
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic api:get-document

Get a specific entire api document from a portal.

## Synopsis

---

Get a specific entire api document from the portal of the provided organization and catalog. The id or name:version of a specific api needs to be provided. For example, 'id-of-api-called-example-3' or 'example:3.0.0'.

```
apic api:get-document --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for api:get-document
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic api:list

Shows a list of apis from a site.

## Synopsis

---

Show a list of apis of the provided org and catalog.

```
apic api:list --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for api:list
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic apic-config

Apic Config operations

## Synopsis

---

Apic Config operations

```
apic apic-config --mode portaladmin [flags]
```

## Options

---

<code>-h, --help</code>	Help for apic-config
-------------------------	----------------------

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic apic-config:get

Get the configuration object that the developer portal holds.

### Synopsis

---

Get the configuration object that the developer portal holds that was sent by APIM.

```
apic apic-config:get --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for apic-config:get
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic application

Application operations

### Synopsis

---

Application operations

```
apic application --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for application
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic application:get

Get a specific application from a developer portal.

### Synopsis

---

Get a specific application from the developer portal of the provided org and catalog. The id of a specific consumer organization needs to be provided.

```
apic application:get --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for application:get
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic application:list

Shows a list of applications from a site.

## Synopsis

---

Show a list of applications of the provided org and catalog.

```
apic application:list --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for application:list
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic backups

Backups operations

## Synopsis

---

Backups operations

```
apic backups --mode portaladmin [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for backups
<code>--portal_service_name string</code>	The name of the portal service (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output

```
--debug-output string  Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic backups:list

List the backups present on the remote backup server.

### Synopsis

---

Lists all the backups that are currently present on the remote backup server, if one has been set.

```
apic backups:list --mode portaladmin [flags]
```

### Options

---

```
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for backups:list
--portal_service_name string  The name of the portal service (required)
-s, --server string   management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string  Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic config

Manage configuration variables

### Synopsis

---

Manage configuration variables

```
apic config --mode portaladmin [flags]
```

### Options

---

```
-g, --global  list the global configuration variables
-h, --help    Help for config
-l, --local   list the local application configuration variables
```

### Options inherited from parent commands

---

```
--accept-license    Accept the license for API Connect
--debug             Enable debug output
--debug-output string  Write debug output to file
--live-help         Enable or disable tracking of limited usage information
-m, --mode string    Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic config:clear

Delete all configuration variables

## Synopsis

---

Delete all configuration variables

```
apic config:clear --mode portaladmin [flags]
```

## Examples

---

```
$ apic config:clear --mode consumer
Deleted config catalog
Deleted config org
Deleted config space
```

```
$ apic config:clear --global --mode consumer
Deleted config catalog
```

## Options

---

```
-g, --global    list the global configuration variables
-h, --help     Help for config:clear
-l, --local    list the local application configuration variables
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic config:delete

Delete a configuration variable

## Synopsis

---

Configuration variables:

**catalog** The catalog configuration variable should be set to the URI of an API Connect catalog. The value of the catalog provides the default identity of a catalog for all the commands that are used to manage aspects of a catalog. The default values defined by the catalog's URI can be overridden using the `--server`, `--organization`, and `--catalog` command line options. The catalog URI has the form: `https://MANAGEMENT_SERVER/consumer-api/catalogs/CONSUMER_ORG_NAME/CATALOG_NAME`

**org** The default value of org defined by the app's or catalog's URI can be set using the org URI. The org URI has the form: `https://MANAGEMENT_SERVER/consumer-api/orgs/CONSUMER_ORG_NAME`

**space** The space configuration variable should be set to the URI of an API Connect space. The value of the space provides the default identity of a space for all the commands that are used to manage aspects of a space. The default values defined by the spaces's URI can be overridden using the `--server`, `--organization`, `--catalog`, and `--space` command line options. The space URI has the form: `https://MANAGEMENT_SERVER/consumer-api/spaces/CONSUMER_ORG_NAME/CATALOG_NAME/SPACE_NAME`

**cloud** The cloud configuration variable should be set to the management server URI. The value of the cloud variable provides default server URI for cloud admin commands. It can be overridden using the `--server` and `--mode` command line options. The cloud URI has the form: `https://MANAGEMENT_SERVER/consumer-api/`

**mode** The value of mode configuration variable defines the toolkit operation mode. It can be overridden using the `--mode` command line option. The value can be set to `apim` or `consumer`

**template-path** List of places to look for handlebar templates

**template-default-api** Defines the default api template

**template-default-product** Defines the default product template

```
apic config:delete NAME... --mode portaladmin [flags]
```

## Examples

---

```
$ apic config:delete catalog --mode consumer
Deleted config catalog
```

```
$ apic config:delete org --mode consumer
Deleted config org
```

## Options

```
-g, --global    list the global configuration variables
-h, --help      Help for config:delete
-l, --local     list the local application configuration variables
```

## Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic config:get

Get a configuration variable

## Synopsis

Configuration variables:

**catalog** The catalog configuration variable should be set to the URI of an API Connect catalog. The value of the catalog provides the default identity of a catalog for all the commands that are used to manage aspects of a catalog. The default values defined by the catalog's URI can be overridden using the `--server`, `--organization`, and `--catalog` command line options. The catalog URI has the form: `https://MANAGEMENT_SERVER/consumer-api/catalogs/CONSUMER_ORG_NAME/CATALOG_NAME`

**org** The default value of `org` defined by the app's or catalog's URI can be set using the `org` URI. The `org` URI has the form: `https://MANAGEMENT_SERVER/consumer-api/orgs/CONSUMER_ORG_NAME`

**space** The space configuration variable should be set to the URI of an API Connect space. The value of the space provides the default identity of a space for all the commands that are used to manage aspects of a space. The default values defined by the spaces's URI can be overridden using the `--server`, `--organization`, `--catalog`, and `--space` command line options. The space URI has the form: `https://MANAGEMENT_SERVER/consumer-api/spaces/CONSUMER_ORG_NAME/CATALOG_NAME/SPACE_NAME`

**cloud** The cloud configuration variable should be set to the management server URI. The value of the cloud variable provides default server URI for cloud admin commands. It can be overridden using the `--server` and `--mode` command line options. The cloud URI has the form: `https://MANAGEMENT_SERVER/consumer-api/`

**mode** The value of `mode` configuration variable defines the toolkit operation mode. It can be overridden using the `--mode` command line option. The value can be set to `apim` or `consumer`

**template-path** List of places to look for handlebar templates

**template-default-api** Defines the default api template

**template-default-product** Defines the default product template

```
apic config:get NAME --mode portaladmin [flags]
```

## Examples

```
$ apic config:get catalog --mode consumer
catalog: https://mgmthost.com/consumer-api/catalogs/climbon/sb
```

```
$ apic config:get org --mode consumer
org: https://mgmthost.com/consumer-api/orgs/climbon
```

## Options

```
-g, --global    list the global configuration variables
-h, --help      Help for config:get
-l, --local     list the local application configuration variables
```

## Options inherited from parent commands

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic config:list

List the application and global configuration variables

### Synopsis

---

Configuration variables:

**catalog** The catalog configuration variable should be set to the URI of an API Connect catalog. The value of the catalog provides the default identity of a catalog for all the commands that are used to manage aspects of a catalog. The default values defined by the catalog's URI can be overridden using the `--server`, `--organization`, and `--catalog` command line options. The catalog URI has the form: `https://MANAGEMENT_SERVER/consumer-api/catalogs/CONSUMER_ORG_NAME/CATALOG_NAME`

**org** The default value of `org` defined by the app's or catalog's URI can be set using the `org` URI. The `org` URI has the form: `https://MANAGEMENT_SERVER/consumer-api/orgs/CONSUMER_ORG_NAME`

**space** The space configuration variable should be set to the URI of an API Connect space. The value of the space provides the default identity of a space for all the commands that are used to manage aspects of a space. The default values defined by the spaces's URI can be overridden using the `--server`, `--organization`, `--catalog`, and `--space` command line options. The space URI has the form: `https://MANAGEMENT_SERVER/consumer-api/spaces/CONSUMER_ORG_NAME/CATALOG_NAME/SPACE_NAME`

**cloud** The cloud configuration variable should be set to the management server URI. The value of the cloud variable provides default server URI for cloud admin commands. It can be overridden using the `--server` and `--mode` command line options. The cloud URI has the form: `https://MANAGEMENT_SERVER/consumer-api/`

**mode** The value of mode configuration variable defines the toolkit operation mode. It can be overridden using the `--mode` command line option. The value can be set to `apim` or `consumer`

**template-path** List of places to look for handlebar templates

**template-default-api** Defines the default api template

**template-default-product** Defines the default product template

```
apic config:list --mode portaladmin [flags]
```

### Examples

---

```
$ apic config --mode consumer
catalog: https://mgmthost.com/consumer-api/catalogs/climbon/sb
org: https://mgmthost.com/consumer-api/orgs/climbon
```

```
$ apic config --global --mode consumer
catalog: https://mgmthost.com/consumer-api/catalogs/climbon/sb
```

### Options

---

```
-g, --global  list the global configuration variables
-h, --help    Help for config:list
-l, --local   list the local application configuration variables
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic config:set

Set or update configuration variables

### Synopsis

---

Configuration variables:

**catalog** The catalog configuration variable should be set to the URI of an API Connect catalog. The value of the catalog provides the default identity of a catalog for all the commands that are used to manage aspects of a catalog. The default values defined by the catalog's URI can be overridden using the `--server`, `--organization`, and `--`

catalog command line options. The catalog URI has the form: `https://MANAGEMENT_SERVER/consumer-api/catalogs/CONSUMER_ORG_NAME/CATALOG_NAME`

org The default value of org defined by the app's or catalog's URI can be set using the org URI. The org URI has the form: `https://MANAGEMENT_SERVER/consumer-api/orgs/CONSUMER_ORG_NAME`

space The space configuration variable should be set to the URI of an API Connect space. The value of the space provides the default identity of a space for all the commands that are used to manage aspects of a space. The default values defined by the spaces's URI can be overridden using the `--server`, `--organization`, `--catalog`, and `--space` command line options. The space URI has the form: `https://MANAGEMENT_SERVER/consumer-api/spaces/CONSUMER_ORG_NAME/CATALOG_NAME/SPACE_NAME`

cloud The cloud configuration variable should be set to the management server URI. The value of the cloud variable provides default server URI for cloud admin commands. It can be overridden using the `--server` and `--mode` command line options. The cloud URI has the form: `https://MANAGEMENT_SERVER/consumer-api/`

mode The value of mode configuration variable defines the toolkit operation mode. It can be overridden using the `--mode` command line option. The value can be set to `apim` or `consumer`

template-path List of places to look for handlebar templates

template-default-api Defines the default api template

template-default-product Defines the default product template

```
apic config:set NAME=VALUE ... --mode portaladmin [flags]
```

## Examples

```
$ apic config:set --mode consumer catalog=https://mgmthost.com/consumer-api/catalogs/climbon/sb
catalog: https://mgmthost.com/consumer-api/catalogs/climbon/sb
```

```
$ apic config:set --mode consumer org=https://mgmthost2.com/consumer-api/orgs/hikeon
org: https://mgmthost2.com/consumer-api/orgs/hikeon
```

## Options

```
-g, --global list the global configuration variables
-h, --help Help for config:set
-l, --local list the local application configuration variables
```

## Options inherited from parent commands

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic consumer-org

Consumer Org operations

## Synopsis

Consumer Org operations

```
apic consumer-org --mode portaladmin [flags]
```

## Options

```
-c, --catalog string Name or ID of the catalog that the site belongs to. (required)
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for consumer-org
-o, --org string Name or ID of the organization that the catalog belongs to. (required)
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic consumer-org:get

Get a specific consumer org from a developer portal.

### Synopsis

---

Get a specific consumer org from the developer portal of the provided org and catalog. The id of a specific consumer organization needs to be provided.

```
apic consumer-org:get --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for consumer-org:get
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic consumer-org:list

Shows a list of consumer orgs from a site.

### Synopsis

---

Show a list of consumer orgs of the provided org and catalog.

```
apic consumer-org:list --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for consumer-org:list
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic custom-module

Custom Module operations

### Synopsis

---

Custom Module operations

```
apic custom-module --mode portaladmin [flags]
```

## Options

---

`-h, --help` Help for custom-module

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic custom-module:create-export

Create a task that exports an archive that contains the custom modules of a site.

## Synopsis

---

You can create a task to export an archive of the custom modules of a site. You can then use that archive to quickly and simply override the custom modules on another site.

```
apic custom-module:create-export --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-module:create-export
<code>--no-poll</code>	Do not poll the created task and just return the task ID
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic custom-module:create-import

Create a task that imports an archive that contains the custom modules of a site.

## Synopsis

---

You can create a task to import an archive of the custom modules of a site. You can use the imported archive to quickly and simply override the custom modules for the specified site.

```
apic custom-module:create-import --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-module:create-import
<code>--no-poll</code>	Do not poll the created task and just return the task ID
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic custom-module:delete-export

If running, cancels a custom module export task.

## Synopsis

---

If running, cancels the custom module export task and deletes any related artifacts that have been generated.

```
apic custom-module:delete-export --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-module:delete-export
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic custom-module:delete-import

If running, cancels a custom module import task.

## Synopsis

---

If running, cancels the custom module import task and deletes any related artifacts that have been generated.

```
apic custom-module:delete-import --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-module:delete-import
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic custom-module:get-export

When ready, streams a custom module export artifact.

### Synopsis

---

When ready, streams a custom module export artifact back to the related task id that is provided in the arguments.

```
apic custom-module:get-export --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-module:get-export
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic custom-module:get-export-status

Returns information about the status of this task.

### Synopsis

---

Returns information related to the task id that is provided in the arguments.

```
apic custom-module:get-export-status --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-module:get-export-status
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic custom-module:get-import-status

Get the result of the custom module import task.

## Synopsis

Get the result of the custom module import task. If the import task has completed on the portal system, this command returns the result of the command. If the import task has not completed on the portal system, it returns the current status of the task.

```
apic custom-module:get-import-status --mode portaladmin [flags]
```

## Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-module:get-import-status
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic custom-theme

Custom Theme operations

## Synopsis

Custom Theme operations

```
apic custom-theme --mode portaladmin [flags]
```

## Options

<code>-h, --help</code>	Help for custom-theme
-------------------------	-----------------------

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic custom-theme:create-export

Create a task that exports an archive that contains the custom themes of a site.

## Synopsis

You can create a task to export an archive of the custom themes of a site. You can then use that archive to quickly and simply override the custom themes on another site.

```
apic custom-theme:create-export --mode portaladmin [flags]
```

## Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-theme:create-export
<code>--no-poll</code>	Do not poll the created task and just return the task ID

```
-o, --org string      Name or ID of the organization that the catalog belongs to. (required)
-s, --server string   management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic custom-theme:create-import

Create a task that imports an archive that contains the custom themes of a site.

### Synopsis

---

You can create a task to import an archive of the custom themes of a site. You can use the imported archive to quickly and simply override the custom themes for the specified site.

```
apic custom-theme:create-import --mode portaladmin [flags]
```

### Options

---

```
-c, --catalog string  Name or ID of the catalog that the site belongs to. (required)
--format string       Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help            Help for custom-theme:create-import
--no-poll             Do not poll the created task and just return the task ID
-o, --org string      Name or ID of the organization that the catalog belongs to. (required)
-s, --server string   management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic custom-theme:delete-export

If running, cancels a custom theme export task.

### Synopsis

---

If running, cancels the custom theme export task and deletes any related artifacts that have been generated. This does not delete any custom themes.

```
apic custom-theme:delete-export --mode portaladmin [flags]
```

### Options

---

```
-c, --catalog string  Name or ID of the catalog that the site belongs to. (required)
--format string       Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help            Help for custom-theme:delete-export
-o, --org string      Name or ID of the organization that the catalog belongs to. (required)
-s, --server string   management server endpoint (required)
--task_id string     ID of the task created on the queue. (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
```

<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic custom-theme:delete-import

Cancels a running custom theme import task.

### Synopsis

Cancels the custom theme import task and deletes any generated artifacts.

```
apic custom-theme:delete-import --mode portaladmin [flags]
```

### Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-theme:delete-import
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic custom-theme:get-export

When ready, streams a custom theme export artifact.

### Synopsis

When ready, streams a custom theme export artifact back to the related task id that is provided in the arguments.

```
apic custom-theme:get-export --mode portaladmin [flags]
```

### Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-theme:get-export
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic custom-theme:get-export-status

Returns information about the status of this task.

### Synopsis

---

Returns information related to the task id that is provided in the arguments.

```
apic custom-theme:get-export-status --mode portaladmin [flags]
```

### Options

---

```
-c, --catalog string  Name or ID of the catalog that the site belongs to. (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for custom-theme:get-export-status
-o, --org string      Name or ID of the organization that the catalog belongs to. (required)
-s, --server string   management server endpoint (required)
--task_id string     ID of the task created on the queue. (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic custom-theme:get-import-status

Get the result of the custom theme import task.

### Synopsis

---

Get the result of the custom theme import task. If the import task has completed on the portal system, this command returns the result of the command. If the import task has not completed on the portal system, it returns the current status of the task.

```
apic custom-theme:get-import-status --mode portaladmin [flags]
```

### Options

---

```
-c, --catalog string  Name or ID of the catalog that the site belongs to. (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for custom-theme:get-import-status
-o, --org string      Name or ID of the organization that the catalog belongs to. (required)
-s, --server string   management server endpoint (required)
--task_id string     ID of the task created on the queue. (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic custom-translation

Custom Translation operations

### Synopsis

---

Custom Translation operations

```
apic custom-translation --mode portaladmin [flags]
```

## Options

---

```
-h, --help Help for custom-translation
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic custom-translation:create-export

Create a task that exports an archive that contains the custom translation of a site.

## Synopsis

---

You can create a task to export an archive of the custom translation of a site. You can then use that archive to quickly and simply override the custom translations on another site.

```
apic custom-translation:create-export --mode portaladmin [flags]
```

## Options

---

```
-c, --catalog string Name or ID of the catalog that the site belongs to. (required)
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for custom-translation:create-export
--langcodes string A comma separated list of language codes e.g. "es,zh-hans"
--no-poll Do not poll the created task and just return the task ID
-o, --org string Name or ID of the organization that the catalog belongs to. (required)
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic custom-translation:create-import

Create a task that imports an archive that contains the custom translations of a site.

## Synopsis

---

You can create a task to import an archive of the custom translations of a site. You can use the imported archive to simply override the custom translations for the specified site. This command may take several minutes to complete.

```
apic custom-translation:create-import --mode portaladmin [flags]
```

## Options

---

```
-c, --catalog string Name or ID of the catalog that the site belongs to. (required)
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for custom-translation:create-import
--no-poll Do not poll the created task and just return the task ID
-o, --org string Name or ID of the organization that the catalog belongs to. (required)
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic custom-translation:delete-export

If running, cancels a custom translation export task.

### Synopsis

---

If running, cancels the custom translation export task and deletes any related artifacts that have been generated. This does not delete any custom translations.

```
apic custom-translation:delete-export --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-translation:delete-export
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic custom-translation:delete-import

If running, cancels a custom translation import task.

### Synopsis

---

If running, cancels the custom translation import task and deletes any related artifacts that have been generated. This does not delete any custom translations.

```
apic custom-translation:delete-import --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-translation:delete-import
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic custom-translation:get-export

When ready, streams a custom translation export artifact.

### Synopsis

---

When ready, streams a custom translation export artifact back to the related task id that is provided in the arguments.

```
apic custom-translation:get-export --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-translation:get-export
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic custom-translation:get-export-status

Returns information about the status of this task.

### Synopsis

---

Returns information related to the task id that is provided in the arguments.

```
apic custom-translation:get-export-status --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-translation:get-export-status
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic custom-translation:get-import-status

Get the result of the custom translation import task.

## Synopsis

Get the result of the custom translation import task. If the import task has completed on the portal system, this command returns the result of the command. If the import task has not completed on the portal system, it returns the current status of the task.

```
apic custom-translation:get-import-status --mode portaladmin [flags]
```

## Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-translation:get-import-status
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic custom-webserver-page

Custom Web Server Page operations

## Synopsis

Custom Web Server Page operations

```
apic custom-webserver-page --mode portaladmin [flags]
```

## Options

<code>-h, --help</code>	Help for custom-webserver-page
-------------------------	--------------------------------

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic custom-webserver-page:delete

Delete the custom HTML for a web server page.

## Synopsis

Delete the custom web server HTML content of a specific web server page (index, 404, 40x, 50x). (Will fallback to a default.)

```
apic custom-webserver-page:delete --mode portaladmin [flags]
```

## Options

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for custom-webserver-page:delete
<code>--page_type string</code>	The page type you want to run this command against. Values: index, 404, 40x, 50x (required)

```
--portal_service_name string  The name of the portal service (required)
-s, --server string          management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic custom-webserver-page:get

Get the HTML for a web server page.

### Synopsis

---

Get the web server HTML content of a specific web server page (index, 404, 40x, 50x).

```
apic custom-webserver-page:get --mode portaladmin [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for custom-webserver-page:get
--page_type string The page type you want to run this command against. Values: index, 404, 40x, 50x
(required)
--portal_service_name string The name of the portal service (required)
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic custom-webserver-page:set

Set a custom HTML page for a web server page type.

### Synopsis

---

Set the custom web server HTML content of a specific web server page (index, 404, 40x, 50x). Maximum size of 8 MB.

```
apic custom-webserver-page:set --mode portaladmin [flags]
```

### Options

---

```
--format string  Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help       Help for custom-webserver-page:set
--page_type string The page type you want to run this command against. Values: index, 404, 40x, 50x
(required)
--portal_service_name string The name of the portal service (required)
-s, --server string management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic drupal-config

Drupal Config operations

### Synopsis

Drupal Config operations

```
apic drupal-config --mode portaladmin [flags]
```

### Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for drupal-config
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>--prefix string</code>	The config prefix. For example, "system". No prefix will return all names in the system.
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic drupal-config:delete

Delete the Config object.

### Synopsis

Delete the Config object or a specific config key.

```
apic drupal-config:delete --mode portaladmin [flags]
```

### Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--config_name string</code>	The config object name, for example "system.site". (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for drupal-config:delete
<code>--config_key string</code>	A config key, for example "page.front".
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic drupal-config:get

Get the Config object

## Synopsis

---

Get the Config object or a specific config key value.

```
apic drupal-config:get --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--config_key string</code>	A config key, for example "page.front".
<code>--config_name string</code>	The config object name, for example "system.site". (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for drupal-config:get
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic drupal-config:list

List the config names by prefix

## Synopsis

---

List the config names by prefix or provide no prefix to see all.

```
apic drupal-config:list --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for drupal-config:list
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>--prefix string</code>	The config prefix. For example, "system". No prefix will return all names in the system.
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic drupal-config:set

Set a config value.

## Synopsis

---

Can set a new config value or update an already existing key-value.

```
apic drupal-config:set --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--config_key string</code>	A config key, for example "page.front". (required)
<code>--config_name string</code>	The config object name, for example "system.site". (required)
<code>--config_value string</code>	The value to assign to the config key. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for drupal-config:set
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic entity

Entity operations

## Synopsis

---

Entity operations

```
apic entity --mode portaladmin [flags]
```

## Options

---

<code>-h, --help</code>	Help for entity
-------------------------	-----------------

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic entity:count

Shows a count of entities from a site.

## Synopsis

---

Show a count of entities of the provided org and catalog.

```
apic entity:count --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for entity:count
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output

```
--debug-output string  Write debug output to file
--live-help            Enable or disable tracking of limited usage information
-m, --mode string      Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic factory-reset

Factory Reset operations

### Synopsis

---

Factory Reset operations

```
apic factory-reset --mode portaladmin [flags]
```

### Options

---

```
-h, --help  Help for factory-reset
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic factory-reset:delete

Factory resets the Developer Portal.

### Synopsis

---

Performs a factory reset of the Developer Portal, deleting the portal service and all portal sites. This command is irreversible - you must ensure that you have backups configured.

```
apic factory-reset:delete --mode portaladmin [flags]
```

### Options

---

```
--execute_reset string  set to true to trigger the Developer Portal reset
--format string          Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help              Help for factory-reset:delete
--portal_service_name string The name of the portal service (required)
-s, --server string      management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license  Accept the license for API Connect
--debug           Enable debug output
--debug-output string Write debug output to file
--live-help       Enable or disable tracking of limited usage information
-m, --mode string  Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic ip-security-enabled

IP Security Enabled operations.

## Synopsis

---

IP Security Enabled operations. Toggle the IP security on your Developer Portal between enabled and disabled. IP security is enabled by default.

```
apic ip-security-enabled --mode portaladmin [flags]
```

## Options

---

```
-h, --help Help for ip-security-enabled
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic ip-security-enabled:update

Enable or disable IP security functionality within the Developer Portal.

## Synopsis

---

Enable or disable IP security functionality within the Developer Portal. IP security is enabled by default.

```
apic ip-security-enabled:update --mode portaladmin [flags]
```

## Options

---

```
--enabled string Set to true or false to enable or disable IP security (required)
--format string Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help Help for ip-security-enabled:update
--portal_service_name string The name of the portal service (required)
-s, --server string Management server endpoint (required)
```

## Options inherited from parent commands

---

```
--accept-license Accept the license for API Connect
--debug Enable debug output
--debug-output string Write debug output to file
--live-help Enable or disable tracking of limited usage information
-m, --mode string Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic licenses

Review the license for API Connect

## Synopsis

---

Review the license for API Connect

```
apic licenses --mode portaladmin [flags]
```

## Options

---

```
-h, --help Help for licenses
--non-ibm-license Display the non IBM license files.
--notices Display the notices file
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic modules

Modules operations

## Synopsis

---

Modules operations

```
apic modules --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--core</code>	Filter out extensions that are not in drupal core.
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for modules
<code>--no-core</code>	Filter out extensions that are provided by drupal core.
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>--package string</code>	Filter by project packages. You can use multiple comma separated values.
<code>-s, --server string</code>	management server endpoint (required)
<code>--status string</code>	Filter by extension status. Choices _ enabled, disabled and/or 'not installed'. You can use multiple comma separated values.

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic modules:delete

Deletes one or more modules.

## Synopsis

---

Deletes one or more modules. The provided list of modules must be comma separated.

```
apic modules:delete --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for modules:delete
<code>--modules string</code>	A list of modules separated by a comma. (required)
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file

<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic modules:disable

Disable one or more modules and their dependent modules.

### Synopsis

Disable one or more modules and their dependent modules. The provided list of modules must be comma separated.

```
apic modules:disable --mode portaladmin [flags]
```

### Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for modules:disable
<code>--modules string</code>	A list of modules separated by a comma. (required)
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic modules:enable

Enable one or more module.

### Synopsis

Enable one or more module by providing a comma separated list.

```
apic modules:enable --mode portaladmin [flags]
```

### Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for modules:enable
<code>--modules string</code>	A list of modules separated by a comma. (required)
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>--resolve-dependencies</code>	Attempt to download any missing dependencies. At the moment, only works when the module name is the same as the project name.
<code>-s, --server string</code>	management server endpoint (required)
<code>--skip</code>	Skip automatic downloading of libraries (c.f. devel).

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic modules:list

Shows a list of available modules.

### Synopsis

---

Show a list of modules for the portal of the provided org and catalog.

```
apic modules:list --mode portaladmin [flags]
```

### Options

---

```
-c, --catalog string  Name or ID of the catalog that the site belongs to. (required)
--core                Filter out extensions that are not in drupal core.
--format string       Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help            Help for modules:list
--no-core            Filter out extensions that are provided by drupal core.
-o, --org string      Name or ID of the organization that the catalog belongs to. (required)
--package string      Filter by project packages. You can use multiple comma separated values.
-s, --server string   management server endpoint (required)
--status string       Filter by extension status. Choices _ enabled, disabled and/or 'not installed'. You can use multiple
comma separated values.
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic php-memory

Php Memory operations

### Synopsis

---

Php Memory operations

```
apic php-memory --mode portaladmin [flags]
```

### Options

---

```
--format string       Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help            Help for php-memory
--portal_service_name string  The name of the portal service (required)
-s, --server string   management server endpoint (required)
```

### Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug               Enable debug output
--debug-output string Write debug output to file
--live-help           Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic php-memory:list

List the PHP memory limit on the platform.

### Synopsis

---

Lists the PHP memory\_limit setting on the portal platform.

```
apic php-memory:list --mode portaladmin [flags]
```

## Options

<code>--format</code> string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for php-memory:list
<code>--portal_service_name</code> string	The name of the portal service (required)
<code>-s, --server</code> string	management server endpoint (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output</code> string	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode</code> string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic php-memory:update

Set the PHP memory limit on the portal platform.

## Synopsis

Sets the PHP memory limit on the portal platform for both admin and web containers

```
apic php-memory:update --mode portaladmin [flags]
```

## Options

<code>--format</code> string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for php-memory:update
<code>--memory_value</code> string	The memory value in megabytes (mb) (required)
<code>--portal_service_name</code> string	The name of the portal service (required)
<code>-s, --server</code> string	management server endpoint (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output</code> string	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode</code> string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic platforms

Platforms operations

## Synopsis

Platforms operations

```
apic platforms --mode portaladmin [flags]
```

## Options

<code>--format</code> string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for platforms
<code>--portal_service_name</code> string	The name of the portal service (required)
<code>-s, --server</code> string	management server endpoint (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic platforms:list

List the platforms present on the portal service.

### Synopsis

Lists all the platforms that are currently present on the Portal service.

```
apic platforms:list --mode portaladmin [flags]
```

### Options

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for platforms:list
<code>--portal_service_name string</code>	The name of the portal service (required)
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic product

Product operations

### Synopsis

Product operations

```
apic product --mode portaladmin [flags]
```

### Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for product
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic product:get

Get a specific product from a developer portal.

### Synopsis

---

Get a specific product from the developer portal of the provided org and catalog. The id or name:version of a specific api needs to be provided. e.g. 'id-of-api-called-example-3' or 'example:3.0.0'.

```
apic product:get --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for product:get
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic product:get-document

Get a specific entire product document from a portal.

### Synopsis

---

Get a specific entire product document from the portal of the provided organization and catalog. The id or name:version of a specific api needs to be provided. For example, 'id-of-api-called-example-3' or 'example:3.0.0'.

```
apic product:get-document --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for product:get-document
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic product:list

Shows a list of products from a site.

### Synopsis

---

Show a list of products of the provided org and catalog.

```
apic product:list --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for product:list
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic security

Security operations

## Synopsis

---

Security operations

```
apic security --mode portaladmin [flags]
```

## Options

---

<code>-h, --help</code>	Help for security
-------------------------	-------------------

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic security:clear-bans

Clear all user/IP bans for a site.

## Synopsis

---

Clear any existing user/IP bans.

```
apic security:clear-bans --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for security:clear-bans
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	Management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic service-ip-allowlist

Service IP Allowlist operations.

### Synopsis

Service IP Allowlist operations. The allowlist service enables specific IPs to be exempt from being blocked by portal security checks, for example, load balancer and proxy IPs.

```
apic service-ip-allowlist --mode portaladmin [flags]
```

### Options

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for service-ip-allowlist
<code>--portal_service_name string</code>	The name of the portal service (required)
<code>-s, --server string</code>	Management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic service-ip-allowlist:add

Add IP(s) to the allowlist.

### Synopsis

Add specific IP(s) to the allowlist.

```
apic service-ip-allowlist:add --mode portaladmin [flags]
```

### Options

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for service-ip-allowlist:add
<code>--ips string</code>	Comma separated list of IPs (required)
<code>--portal_service_name string</code>	The name of the portal service (required)
<code>-s, --server string</code>	Management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic service-ip-allowlist:delete

Delete all IPs from the allowlist.

### Synopsis

---

Delete all of the IPs from the allowlist.

```
apic service-ip-allowlist:delete --mode portaladmin [flags]
```

### Options

---

<code>--format</code> string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for service-ip-allowlist:delete
<code>--portal_service_name</code> string	The name of the portal service (required)
<code>-s, --server</code> string	Management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output</code> string	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode</code> string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic service-ip-allowlist:list

List IP(s) currently on the allowlist.

### Synopsis

---

List all of the IP(s) that are currently on the allowlist.

```
apic service-ip-allowlist:list --mode portaladmin [flags]
```

### Options

---

<code>--format</code> string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for service-ip-allowlist:list
<code>--portal_service_name</code> string	The name of the portal service (required)
<code>-s, --server</code> string	Management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output</code> string	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode</code> string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic service-ip-allowlist:remove

Remove specific IP(s) from the allowlist.

### Synopsis

---

Remove one or more specific IP(s) from the allowlist.

```
apic service-ip-allowlist:remove --mode portaladmin [flags]
```

## Options

---

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for service-ip-allowlist:remove
<code>--ips string</code>	Comma separated list of IPs (required)
<code>--portal_service_name string</code>	The name of the portal service (required)
<code>-s, --server string</code>	Management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic site

Site operations

## Synopsis

---

Site operations

```
apic site --mode portaladmin [flags]
```

## Options

---

```
-h, --help Help for site
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic site:cache-rebuild

Rebuilds the cache of a specific portal site.

## Synopsis

---

Clears the existing cache and rebuilds a new one for a specific portal site.

```
apic site:cache-rebuild --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for site:cache-rebuild
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic site:check

Run a platform check against a portal site

### Synopsis

Performs filesystem, database and API Manager checks against a portal site. This command is useful when trying to identify platform related problems if you are having issues with your portal site.

```
apic site:check --mode portaladmin [flags]
```

### Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for site:check
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic site:state

Obtain the current state of a portal site.

### Synopsis

Returns the state of a portal site. This command is useful as a general health check analysis of the portal site.

```
apic site:state --mode portaladmin [flags]
```

### Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for site:state
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic site-config

## Synopsis

---

Site Config operations

```
apic site-config --mode portaladmin [flags]
```

## Options

---

```
-h, --help Help for site-config
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic site-config:create-export

Create a task that exports an archive that contains the configuration of a site.

## Synopsis

---

You can create a task to export an archive of the configuration of a site. You can then use that archive to quickly and simply override the configuration on another site.

```
apic site-config:create-export --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for site-config:create-export
<code>--no-poll</code>	Do not poll the created task and just return the task ID
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic site-config:create-import

Create a task that imports an archive that contains the configuration of a site.

## Synopsis

---

You can create a task to import an archive of the configuration of a site. You can use the imported archive to quickly and simply override the configuration for the specified site.

```
apic site-config:create-import --mode portaladmin [flags]
```

## Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.

<code>-h, --help</code>	Help for <code>site-config:create-import</code>
<code>--no-poll</code>	Do not poll the created task and just return the task ID
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic site-config:delete-export

If running, cancels a site configuration export task.

### Synopsis

---

If running, cancels the site configuration export task and deletes any related artifacts that have been generated.

```
apic site-config:delete-export --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for <code>site-config:delete-export</code>
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#), for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic site-config:delete-import

Cancels a running site configuration import task.

### Synopsis

---

Cancels the site configuration import task and deletes any generated artifacts.

```
apic site-config:delete-import --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for <code>site-config:delete-import</code>
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file

<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic site-config:get-export

When ready, streams a site configuration export artifact.

### Synopsis

When ready, streams a site configuration export artifact back to the related task id that is provided in the arguments.

```
apic site-config:get-export --mode portaladmin [flags]
```

### Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for site-config:get-export
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic site-config:get-export-status

Returns information about the status of this task.

### Synopsis

Returns information related to the task id that is provided in the arguments.

```
apic site-config:get-export-status --mode portaladmin [flags]
```

### Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for site-config:get-export-status
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)
<code>--task_id string</code>	ID of the task created on the queue. (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic site-config:get-import-status

Get the result of the site configuration import task.

### Synopsis

Get the result of the site configuration import task. If the import task has completed on the portal system, this command returns the result of the command. If the import task has not completed on the portal system, it returns the current status of the task.

```
apic site-config:get-import-status --mode portaladmin [flags]
```

### Options

-c, --catalog string	Name or ID of the catalog that the site belongs to. (required)
--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for site-config:get-import-status
-o, --org string	Name or ID of the organization that the catalog belongs to. (required)
-s, --server string	management server endpoint (required)
--task_id string	ID of the task created on the queue. (required)

### Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic sites

Sites operations

### Synopsis

Sites operations

```
apic sites --mode portaladmin [flags]
```

### Options

--format string	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help	Help for sites
--portal_service_name string	The name of the portal service (required)
-s, --server string	management server endpoint (required)

### Options inherited from parent commands

--accept-license	Accept the license for API Connect
--debug	Enable debug output
--debug-output string	Write debug output to file
--live-help	Enable or disable tracking of limited usage information
-m, --mode string	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic sites:check

Run a platform check against all portal sites present on a portal service.

### Synopsis

---

Performs filesystem, database and API Manager checks against all portal sites on a given portal service. This command is useful when trying to identify platform related problems on one of more of your portal sites.

```
apic sites:check --mode portaladmin [flags]
```

## Options

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for sites:check
<code>--portal_service_name string</code>	The name of the portal service (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic sites:list

List the sites present on the Portal service.

## Synopsis

Lists all the sites that are currently present on the Portal service.

```
apic sites:list --mode portaladmin [flags]
```

## Options

<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for sites:list
<code>--portal_service_name string</code>	The name of the portal service (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic themes

Themes operations

## Synopsis

Themes operations

```
apic themes --mode portaladmin [flags]
```

## Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--core</code>	Filter out extensions that are not in drupal core.
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for themes
<code>--no-core</code>	Filter out extensions that are provided by drupal core.
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>--package string</code>	Filter by project packages. You can use multiple comma separated values.

```
-s, --server string      management server endpoint (required)
--status string        Filter by extension status. Choices _ enabled, disabled and/or 'not installed'. You can use multiple
comma separated values.
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic themes:delete

Deletes one or more themes.

## Synopsis

---

Deletes one or more themes. The provided list of themes must be comma separated.

```
apic themes:delete --mode portaladmin [flags]
```

## Options

---

```
-c, --catalog string  Name or ID of the catalog that the site belongs to. (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for themes:delete
-o, --org string      Name or ID of the organization that the catalog belongs to. (required)
-s, --server string   management server endpoint (required)
--themes string      A list of themes separated by a comma. (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
--live-help          Enable or disable tracking of limited usage information
-m, --mode string     Toolkit operation mode (default "apim")
```

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic themes:disable

Disable one or more themes.

## Synopsis

---

Disable one or more themes and their dependent modules. The provided list of themes must be comma separated.

```
apic themes:disable --mode portaladmin [flags]
```

## Options

---

```
-c, --catalog string  Name or ID of the catalog that the site belongs to. (required)
--format string      Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
-h, --help           Help for themes:disable
-o, --org string      Name or ID of the organization that the catalog belongs to. (required)
-s, --server string   management server endpoint (required)
--themes string      A list of themes separated by a comma. (required)
```

## Options inherited from parent commands

---

```
--accept-license      Accept the license for API Connect
--debug              Enable debug output
--debug-output string Write debug output to file
```

<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic themes:enable

Enable one or more theme.

### Synopsis

Enable one or more theme by providing a comma separated list.

```
apic themes:enable --mode portaladmin [flags]
```

### Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for themes:enable
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>--resolve-dependencies</code>	Attempt to download any missing dependencies. At the moment, only works when the module name is the same as the project name.
<code>-s, --server string</code>	management server endpoint (required)
<code>--skip</code>	Skip automatic downloading of libraries (c.f. devel).
<code>--themes string</code>	A list of themes separated by a comma. (required)

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic themes:list

Shows a list of available themes.

### Synopsis

Show a list of themes for the portal of the provided org and catalog.

```
apic themes:list --mode portaladmin [flags]
```

### Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--core</code>	Filter out extensions that are not in drupal core.
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for themes:list
<code>--no-core</code>	Filter out extensions that are provided by drupal core.
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>--package string</code>	Filter by project packages. You can use multiple comma separated values.
<code>-s, --server string</code>	management server endpoint (required)
<code>--status string</code>	Filter by extension status. Choices <code>_ enabled, disabled and/or 'not installed'</code> . You can use multiple comma separated values.

### Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic themes:set-default

Set a portal's default theme.

### Synopsis

---

Set a portal's default theme. The theme provided must be one that is already enabled.

```
apic themes:set-default --mode portaladmin [flags]
```

### Options

---

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for themes:set-default
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic twig

Twig operations.

### Synopsis

---

Twig operations.

```
apic twig --mode portaladmin [flags]
```

### Options

---

<code>-h, --help</code>	Help for twig
-------------------------	---------------

### Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

---

## apic twig:debug-disable

Disable twig debugging on a specific portal site.

### Synopsis

---

Disable twig debugging on a specific portal site. Twig debugging helps locate twig template issues.

```
apic twig:debug-disable --mode portaladmin [flags]
```

## Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for twig:debug-disable
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic twig:debug-enable

Enables twig debugging on a specific portal site.

## Synopsis

Enables twig debugging on a specific portal site. Twig debugging helps locate twig template issues.

```
apic twig:debug-enable --mode portaladmin [flags]
```

## Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for twig:debug-enable
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

## apic twig:debug-status

Shows the current state of twig debugging on a specific portal site.

## Synopsis

View the current state of twig debugging on a specific portal site, if you are unsure whether it is enabled or disabled.

```
apic twig:debug-status --mode portaladmin [flags]
```

## Options

<code>-c, --catalog string</code>	Name or ID of the catalog that the site belongs to. (required)
<code>--format string</code>	Output format. One of [json yaml go-template=... go-template-file=...], defaults to yaml.
<code>-h, --help</code>	Help for twig:debug-status
<code>-o, --org string</code>	Name or ID of the organization that the catalog belongs to. (required)
<code>-s, --server string</code>	management server endpoint (required)

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## apic version

Get the APIConnect toolkit version

## Synopsis

---

Get the APIConnect toolkit version

```
apic version --mode portaladmin [flags]
```

## Options

---

```
-h, --help Help for version
```

## Options inherited from parent commands

---

<code>--accept-license</code>	Accept the license for API Connect
<code>--debug</code>	Enable debug output
<code>--debug-output string</code>	Write debug output to file
<code>--live-help</code>	Enable or disable tracking of limited usage information
<code>-m, --mode string</code>	Toolkit operation mode (default "apim")

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## API Connect REST APIs

The API Connect platform REST APIs provide complete access to the capability of the platform.

The API Connect platform REST APIs can be used for the following actions:

- Automate the administration of the platform.
- Implement scripts and tools to support a continuous integration environment for API development and publishing.
- Manage catalogs of APIs, and their subscribers.

The operations provided in the REST APIs also correspond directly with the commands in the [developer toolkit command-line tool \(CLI\)](#).

Note: You can now use the URL to navigate directly to specific APIs and operations in the OpenAPI Explorer Documentation for the API Connect REST APIs. You can also select the APIs for a specific version by using the drop-down menu in the header bar.

For full details, see the [API Connect REST API documentation](#).

**Note:** No fixes or enhancements are being added to IBM API Connect 10.0.2.0 to 10.0.4.x, and it is EOS after 16 December 2023. See [support policy](#) for details. For a more recent version of CD documentation, see the [IBM API Connect 10.0.6.x and later product documentation](#).

---

## Example: Using the platform REST APIs to publish a product containing a SOAP API

Review this sample scenario to see how you can use the API Connect platform REST APIs to publish a product that contains a SOAP API.

This example demonstrates how to format a request to publish the product, and includes sample files that illustrate the product definition, the API definition, and the SOAP API's WSDL description.

## Using the Catalogs API

---

Publish the product using the API Connect platform `Catalogs` API:

- To publish a product to a catalog, use the following syntax:

```
POST catalogs/{org}/{catalog}/publish
```

- To publish a product to a space within a catalog, additionally specify the space with the following syntax:

```
POST catalogs/{org}/{catalog}/{space}/publish
```

The payload in both cases is a multipart, form-encoded body containing three required parts and one optional part:

- (Required) A part named `product` with media type `application/yaml` or `application/json`, containing the yaml or JSON source for the product to be published.
- (Required) One or more occurrences of a part named `openapi` with media type `application/yaml` or `application/json`, containing the YAML or JSON source for each API in the product.
- (Required for SOAP APIs) One or more occurrences of a part named `wSDL` with media type `application/wSDL`, `application/wSDL+xml`, `text/xml`, or `application/zip` containing the WSDL definitions (and referenced XSD files if applicable) associated with the API content.
- (Optional) A part named `gateway_service_urls` with media type `application/yaml` or `application/json` which is a YAML or JSON array of URLs to specify a subset of the configured gateway services within the catalog or space as publish targets. These URLs can be obtained using the following calls:

- For a catalog:

```
GET /api/catalogs/{org}/{catalog}/configured-gateway-services
```

- For a space:

```
GET /spaces/{org}/{catalog}/{space}/configured-gateway-services
```

Within the `product` content, the form of the references to APIs in the `apis` section is significant. Each API reference must use the `name` property instead of the `$ref` form that may appear in other situations. Here is an example showing a product that refers to the API `globalweather` version `1.0.0` in the correct form:

```
info:
  version: 1.0.0
  title: GlobalWeatherProduct
  name: globalweatherproduct
plans:
  ...
apis:
  globalweather1.0.0:
    name: globalweather:1.0.0
...
```

## Example publish operation using cURL

This example publishes a product containing a SOAP API to the `Sandbox` catalog of the `onlinebanking` provider organization, using the `curl -F` option to create a set of form-encoded payload parts and the `@` prefix to read the content for each part from a file. Note the part name (`product`, `openapi`, `wSDL`) and the content type of each part given by the `type=` value.

In this example, the access token has been retrieved earlier and placed in an environment variable named `TOKEN`. The command is split onto multiple lines for ease of reading but must be entered as a single line.

Request:

```
curl -v -k
-F "product=@globalweatherproduct_1.0.0.yaml;type=application/yaml"
-F "openapi=@globalweather_1.0.0.yaml;type=application/yaml"
-F "wSDL=@globalweather.wSDL;type=application/wSDL"
-H "Authorization: Bearer $TOKEN"
-H 'Content-Type: multipart/form-data'
-H 'Accept: */*' https://dev.apic.example.com/api/catalogs/onlinebanking/sandbox/publish
```

Response:

201 Created

```
