IBM Planning Analytics 2.0.9.9 LC - Fix List

Component	APAR	Description
General product	PH36233	Unable to reject contributor node containing apostrophe (') character
	PH37498	Architect/server explorer logon in 2.0.9.7 is slower than previous versions
Server	PH38216	TM1 server hang due to deadlock - when thread is inside transaction log critical section while acquiring a TM1 object lock
	PH35793	Trace feeders from Planning Analytics Workspace display error "unexpected value during feeder trace"
	PH35176	Server crash when connecting to ODBC database where column names are nulls
	PH33056	Planning Analytics server crash while manipulating the process metadata tab
	PH37061	TM1 server crashes when executing in the same process to create new hierarchy into a dimension and create 'caption' attribute to leaf elements of the new hierarchy
	PH37400	TM1 SERVER CRASHES DUE TO STACK OVERFLOW CONDITION USING UNDOCUMENTED StargateOptimizationInRules=T
	PH33799	Planning Analytics Workspace set editor: searching members by alias in Cyrillic or Japanese (multi-byte string) does not work
	PH36902	Feeder recalculation triggered during TM1 server startup due to incorrect cube serialized message getting captured in tm1s.log
	PH37947	TM1 server crash during construction of filler hierarchy member
	PH37960	TM1 server instances getting unregistered from the admin server due to runaway process causing event handle exhaustion on Windows

Component	APAR	Description
	PH38376	MDX with aggregate function returns nulls instead of values for non-admin users when the model has dimension security defined for the dimension participating in the query
	PH38702	Incorrect value running MDX Aggregate function when left hand side of the rule has no explicit dimension
