IBM Resilient

Incident Response Platform

Release Notes v29.3

Release Date: March 2018

Based on a knowledge base of incident response best practices, industry standard frameworks, and regulatory requirements, the Resilient Incident Response Platform helps make incident response efficient and compliant.

FEATURES AND ENHANCEMENTS

The V29.3 release of the Resilient Incident Response Platform introduces the following new features and enhancements. All changes and bug fixes from the previous V29.2 release are included.

- **Security Updates**. For customers on the Red Hat Enterprise Linux version of the Resilient platform, this release includes all pertinent security updates to the underlying platform that have been released since the previous release of the Resilient platform. These security updates are provided in a .run file in the same folder as the 29.3 update. Instructions for installing them are included in the release announcement email. These updates are cumulative and include all relevant packages whether you upgrade from 29.0, 29.1 or 29.2.

- **Privacy regulation updates**. Privacy regulations were updated to reflect changes to regulations in Massachusetts and Australia.

- **Memory utilization improvements.** The Resilient service has been configured to automatically make use of additional system memory if it is available. It takes effect at service startup. This behavior can be overridden by modifying jvmenv.sh.

- **Diagnostics and monitoring.**
    - Additional diagnostic logging has been added to the postinstall shell script.
    - Additional metrics have been added to monitoring.log.

CORRECTED ISSUES

IBM Resilient has recently changed to a new defect tracking system, and all issues have new tracking codes. The following table lists both the new and old codes, as appropriate, for issues.

Tracking Code	Issue
RES-3579 / RES-7828 / DE961	Clicking the "Forgot password link" can lock out ADFS / LDAP users.
RES-5094 / DE2563	Tasks Notes - Filter by date: Trying to use the ENTER key to add a date does not work.
RES-5225 / DE2703	No tooltips for Regulators in "Investigate exposure of PI" task.
RES-5910 / DE3440	Custom widget date filters do not work with custom date fields.
RES-5973 / DE3516	Tab Layout does not always refresh in accordance with conditional logic until there is a browser refresh.
RES-6106 / DE3664	"Description" field at the top of incidents does not wrap text.
RES-7827	Upgrade takes a long time for systems with lots of attachments.
RES-6134 / DE3696	When using Internet Explorer, the Administrator Settings page refreshes when a user tries to edit Session Timeout.
