# IBM Resilient

## Incident Response Platform

### Release Notes V32.0 HotFix1

Release Date: January 2019

IBM Resilient Incident Response Platform on Cloud and IBM Resilient Incident Response Platform V32.0 (on-premises licensed version) orchestrate and automate the people, processes, and technology that are associated with incident response. Purpose-built for either cloud or on-premises environments based on your business needs, these Resilient Incident Response Platform solutions streamline incident response and privacy response management to provide an automatic, fast, and flexible way for organizations to react to events and incidents.

## CORRECTED ISSUES

| Tracking Code | Issue |
|---|---|
| RES-12917 | Email service imap component does not inherit ssl protocol and cipher settings used by Resilient and therefore attempts to use TLSv1. |
