# Resilient SOAR Platform <br> Release Notes V32.4 

Release Date: May 2019
IBM Resilient Security Orchestration, Automation, and Response (SOAR) Platform V32.4 enables organizations to orchestrate and automate the people, processes, and technology that are associated with incident response. Purpose-built for either cloud or on-premises environments based on your business needs, these solutions streamline incident response and privacy response management to provide an automatic, fast, and flexible way for organizations to react to events and incidents.

## FEATURES AND ENHANCEMENTS

The V32.4 release of the Resilient SOAR Platform introduces a number of new features and enhancements. All changes and bug fixes from the previous releases are included.
The following new features and enhancements are provided in Resilient V32.4:

- rsync: The optional packages installer updates the version of rsync to a newer version to fix an rsync bug (RHBA-2019:0822). See https://access.redhat.com/errata/RHBA2019:0822?sc cid=701600000006NHXAA2 for full details and references. The updated rsync package is included in the security-updates run file as well as in the optional-updates run file. As before, to install the rsync package, you must apply the optional-updates run file. However, if already installed, the rsync package is updated with the other packages when you apply the security-updates run file.
- Security Updates: The security update for V32.4 addresses various security issues. For onpremises customers, consult the Resilient Installation Guide for the location of these updates. On-Cloud customers are updated automatically.
- Privacy Updates:
- The following regulators were updated in the Privacy Add-on:
- European Union: As part of our continuous monitoring effort around GDPR, we make regular updates to incorporate member state implementing laws, links, addresses, and contact information for EU data protection authorities. We added the Czech Republic's new Personal Data Act and Amendment Act in the Resource Library.
- Turkey: Updated the Resource Library to include multiple implementing laws and guidance links. The links added are the following: The Personal Data Protection Authority's (KKVK) Information Note on the Law on the Protection of Personal Data No. 6698, which is only available in Turkish, The Personal Data Protection Authority's (KKVK) Data Protection Guidelines, and The Personal Data Protection Board's Decision 2019/10 on the Process for Personal Data Breach Notification, which is only available in Turkish. Additionally, the timing to notify the personal data protection board has now been set to 72 hours and we removed the document template and included a new online form link. Furthermore, the timing set to notify the affected individuals is now set to undue delay to match the language of the KKVK's Data Protection Guidelines.
- North Carolina: Modified the Personal Information trigger to First Name/First Initial with Last Name in combination with Digital Signature to trigger the following: Notify Credit Bureaus (if over 1,000 NC record count), Notify (NC) AG, and Notify (NC) Consumers Individually. Additionally, we updated the Notify (NC) Consumers Individuals task.
- Oregon: Updated the Resource Library. Additionally, we updated the Personal Information triggers to expand to include all financial information.
- Massachusetts: Updated the Resource Library with the amendment link.
- Kentucky: Updated the Resource Library with a new source link.
- Tennessee: Updated the encryption trigger.

NOTE: We always appreciate feedback on current legislation and guidance whether it appears in our product or not. Contact your Customer Relationship Manager if you have any questions about these updates or suggestions for future updates. You can also use the IBM Resilient Community to see how your peers are using IBM Resilient to simplify the complex world of information security.

## CORRECTED ISSUES

| Tracking <br> Code | Issue |
| :--- | :--- |
| RES-12621 | Poor performance when creating incident with many artifacts. |
| RES-12803 | The generation of Excel reports causes excessive number of database calls, <br> leading to poor performance. |
| RES-13479 | The cacerts password is not changed during upgrade. |
| RES-14297 | An unhandled exception while correlating an artifact leads to errors in the <br> client.log. |
| RES-14374 | The upgrade from V32.2 to V32.3 fails when the KeyVault password is encrypted. |
